Contents

1  Dissidents and the Second Quantum Revolution ........................................ 1
   1.1 The Dynamics of Change in Science ........................................... 5
   1.2 Strategy and Historiographical Issues ....................................... 9
   References .................................................................................. 14

2  Challenging the Monocracy of the Copenhagen School .............................. 17
   2.1 Interpretation of Quantum Theory Before David Bohm ...................... 17
   2.2 Bohm’s Causal Interpretation of Quantum Mechanics ..................... 21
   2.3 Backgrounds of Bohm’s Causal Interpretation .............................. 25
       2.3.1 Trapped in the Cold War Storm ......................................... 28
       2.3.2 Bohm, de Broglie, and Pauli: Conceptual Issues and
            Disputes About Priorities .............................................. 30
       2.3.3 Exile in Brazil ............................................................ 32
   2.4 Critics and Supporters of the Causal Interpretation ....................... 35
       2.4.1 Supporters ................................................................. 42
       2.4.2 Mixed Reactions ......................................................... 44
       2.4.3 The Old Guard ......................................................... 45
       2.4.4 Bohm’s Proposal and Philosophers of Science .................... 48
   2.5 Waning Causality and Disenchantment with Communism
      (Late 1950s–Early 1960s) ..................................................... 49
       2.5.1 Break with Communism ................................................. 49
       2.5.2 Causality Relativized ................................................... 52
       2.5.3 Abandonment of the Causal Interpretation ....................... 54
       2.5.4 Citizenship Lost, Dignity Preserved ................................ 55
       2.5.5 New Acquaintances: Students and Collaborators ............... 57
   2.6 New Perspectives: Wholeness and Implicate Order ........................... 59
       2.6.1 Returning to the Quantum Potential ................................ 61
   2.7 On the Legacy of a Notable Quantum Dissident ................................. 63
       2.7.1 Historiography on Bohm’s Interpretation ........................... 66
   References .................................................................................. 68
3 The Origin of the Everettian Heresy ........................................... 75
  3.1 Introduction ........................................................................... 75
  3.2 Historical Background: The Twilight of the "Copenhagen Monocracy" ........................................................................... 77
    3.2.1 General Attitude Towards the Foundational Issues in the US ........................................................................... 77
    3.2.2 Bohr and the Quantum Orthodoxy ..................................... 79
    3.2.3 The Revival of Dissidence and the Measurement Problem .... 83
  3.3 The Genesis of Everett’s Thesis .............................................. 87
    3.3.1 Everett at Princeton ............................................................. 87
    3.3.2 The Steps Towards the Dissertation .................................... 91
  3.4 The Reasons for Everett’s Discontent ..................................... 93
    3.4.1 Standard Formulation .......................................................... 93
    3.4.2 Dualistic Approach .............................................................. 95
    3.4.3 Hidden Variables ............................................................... 98
  3.5 Everett’s Project ................................................................. 99
    3.5.1 A Unitary Model of the World ............................................. 99
    3.5.2 Objective Description and Correlations ............................ 101
    3.5.3 Subjective Experience and Probabilities ......................... 103
  3.6 Striving for Copenhagen’s Imprimatur ................................. 107
  3.7 The Issues at Stake in the Debate ......................................... 115
    3.7.1 Symbolism ....................................................................... 115
    3.7.2 Relativity ....................................................................... 117
    3.7.3 Irreversibility ................................................................. 119
    3.7.4 Words ......................................................................... 121
    3.7.5 Observers ..................................................................... 125
  3.8 Epilogue ............................................................................. 129
Concluding Remarks .................................................................... 133
References .................................................................................. 134

4 The Monocracy is Broken: Orthodoxy, Heterodoxy, and Wigner’s Case ................................................................. 141
  4.1 Introduction .......................................................................... 141
  4.2 Measurement Problem Before Wigner ................................. 142
  4.3 Enter Wigner ..................................................................... 149
  4.4 The Heated Dispute: Wigner Versus Rosenfeld and the Italians . 156
  4.5 The Orthodoxy Splits ............................................................ 161
  4.6 Wigner’s Style of Intellectual Leadership ......................... 162
Epilogue and Conclusion: Orthodoxy Becomes Heterodoxy .......... 166
References .................................................................................. 170

5 The Tausk Controversy on the Foundations of Quantum Mechanics: Physics, Philosophy, and Politics ............................................. 175
  5.1 Introduction .......................................................................... 175
  5.2 Scientific Background ........................................................ 176
6 "From the Streets into Academia": Political Activism and the Reconfiguration of Physics Around 1970

6.1 Introduction

6.2 The Mesh of Science and Politics: The Varenna Summer Schools

6.3 The Schools and Their Results

6.3.1 1970: Foundations of Quantum Mechanics

6.3.2 1972: History of Physics in the Twentieth Century

6.4 Ongoing Political Activism and Its Later Fading

6.5 On the Other Side of the Atlantic: The Schwartz Amendment...

6.6 Physics Today and the Second Life of Everett’s Quantum Proposal

Conclusion
