Contents

1 Introduction .................................................. 1
  1.1 Introduction ............................................ 1
  References .................................................. 3

2 Selection of Water Quality Monitoring Stations ............... 5
  2.1 Historical Background ..................................... 5
  2.2 Sanders Method .......................................... 6
  2.3 Multiple-Criteria Decision Making (MCDM) Method ........ 8
    2.3.1 Making Dimensionless ................................ 9
    2.3.2 Assessment of Weighting (Wj) for Attributes ...... 10
  2.4 Dynamic Programming Approach (DPA) Method ............. 10
    2.4.1 The DPA Theory ..................................... 10
    2.4.2 Normalization and Uniformization Procedure ....... 12
  2.5 Application of Sanders Method ......................... 14
    2.5.1 Comment on the Application ....................... 19
  References .................................................. 19

3 Water Quality Indices (WQI) ................................ 21
  3.1 Historical Background ................................... 21
  3.2 Summary of WQI Methods ................................ 26
  3.3 National Sanitation Foundation’s Water Quality Index ... 26
    (NSFWQI) Method ........................................ 26
  3.4 British Columbia Water Quality Index as (BCWQI) ... 29
    Method .................................................. 29
  3.5 Application of NSFWQI Method, a Case Study: Kārūn ... 30
    River (Iran) ............................................. 30
  3.6 Application of NSFWQI Method in Sefid-Rud River (Iran) 33
  3.7 Application of BCWQI Method in Sefid-Rud River (Iran) 36
  3.8 Comments on Application ................................ 38
  References .................................................. 38
4 Time Series Modeling
4.1 Introduction
4.2 Historical Background
4.3 Time Series
4.4 Forecast Error
4.5 Box-Jenkins Methodology for Time Series Modeling
4.6 Stationary and Non-stationary Time Series
4.7 The Sample Autocorrelation and Partial Autocorrelation Functions
4.8 Classification of Non-seasonal Time Series Models
4.9 Guidelines for Choosing a Non-seasonal Models
4.10 Seasonal Box-Jenkins Models
4.11 Guidelines for Identification of Seasonal Models
4.12 Diagnostic Checking
4.13 Exponential Smoothing Methods
4.13.1 Simple Exponential Smoothing
4.14 Winter’s Method
4.15 One and Two-Parameter Double Exponential Smoothing
4.16 Adaptive Control Procedures
4.17 Application of Time Series
4.17.1 A Case Study: Latian Dam Water Quality
4.18 Summary

References

5 Artificial Neural Network
5.1 Introduction
5.2 Historical Background
5.3 Artificial Neural Network Theory
5.3.1 Theory of ANN
5.3.2 Dynamic ANN Models
5.3.3 Data Preparation
5.3.4 Learning Rate
5.3.5 Model Efficiency
5.4 Application of Artificial Neural Network
5.4.1 A Case Study: Zaribar Water Quality (Iran)
