Contents

1. Introduction .................................................. 1
   1.1. Motivation and aim of the study ......................... 1
   1.2. Preliminaries: defining the main concepts .............. 6
       1.2.1. External imbalances ............................. 6
       1.2.2. Sustainability concepts ......................... 7
   1.3. Outline of the study .................................... 9

2. Digression on balance of payments accounting identities ..... 11
   2.1. Accounting identity based on trade balance and income balances 11
   2.2. Accounting identity based on income and absorption ....... 12
   2.3. Accounting identity based on saving and investment ....... 12
   2.4. Combining accounting identities ........................ 13

3. Intertemporal budget constraint as a sustainability criterion 17
   3.1. Long-run budget constraint in the intertemporal approach to the current account 19
       3.1.1. Description of the model economy ................. 19
       3.1.2. Single-period budget constraint .................. 21
       3.1.3. Intertemporal budget constraint in the deterministic setting 23
       3.1.4. Specific intertemporal budget constraint in the stochastic setting 30
   3.2. Intertemporal budget constraint in a general-equilibrium model 32
       3.2.1. Characteristics of the model economy and the representative agent's maximization problem 32
       3.2.2. General intertemporal budget constraint .......... 34
       3.2.3. Comparison of the general intertemporal budget constraint to the specific intertemporal budget constraint 36
   3.3. Discussion of the theoretical framework ................. 38
   3.4. Conclusion ............................................. 42
   3.A. Appendix to subsection 3.1.3 .......................... 45
       3.A.1. Recursive substitution method .................... 45
       3.A.2. Telescoping Argument ............................. 46
   3.B. Appendix to subsection 3.2.2 .......................... 47
4. Empirical implications of the intertemporal budget constraint
   4.1. Sufficient conditions for the strong notion of sustainability
     4.1.1. Stationarity of the NIIP and the trade balance
     4.1.2. First-difference-stationarity of the NIIP
     4.1.3. Cointegration between current account components
     4.1.4. Conclusion
   4.2. Sufficient conditions for the strong and weak notions of sustainability
     4.2.1. Difference-stationarity of the NIIP of any order
     4.2.2. Responsiveness of the trade account to the NIIP
   4.3. Conclusion
   4.A. Appendix to subsubsection 4.2.2.1
   4.B. Appendix to subsubsection 4.2.2.2

5. Empirical studies on the validity of the intertemporal budget constraint
   5.1. Testing for stationarity of the NIIP and the current account
     5.1.1. Overview
     5.1.2. Linear univariate unit root tests
     5.1.3. Linear panel-based unit root tests
     5.1.4. Nonlinear unit root tests
   5.2. Testing for cointegration between the components of the current account
     5.2.1. Overview
     5.2.2. Two-step Engle-Granger methodology
     5.2.3. Error-correction model tests
     5.2.4. Autoregressive distributed lag bounds test
     5.2.5. Gregory-Hansen test with structural breaks
     5.2.6. Johansen methodology
     5.2.7. Panel cointegration tests
   5.3. Testing for the responsiveness of the trade account to the NIIP
     5.3.1. Wickens and Uctum's (1993) approach
     5.3.2. Multicointegration approach
     5.3.3. Bohn's (2007) approach
   5.4. Conclusion
   5.A. Appendix to section 5.1
   5.B. Appendix to section 5.2
   5.C. Appendix to section 5.3

6. Dynamic benchmarks of external sustainability
   6.1. Dynamic benchmark in the intertemporal approach to the current account
     6.1.1. Consumption-smoothing current account path under certainty equivalence
     6.1.2. Consumption-smoothing current account path under certainty equivalency and limited capital mobility
     6.1.3. Adjusting for consumption tilting under linear-quadratic utility
     6.1.4. Adjusting for consumption tilting under power utility
     6.1.5. Introducing habit formation under linear-quadratic utility
   6.2. Dynamic benchmark in the partial equilibrium approach to the current account
     6.2.1. Consumption-smoothing current account path under certainty equivalence
     6.2.2. Consumption-smoothing current account path under certainty equivalency and limited capital mobility
     6.2.3. Adjusting for consumption tilting under linear-quadratic utility
     6.2.4. Adjusting for consumption tilting under power utility
     6.2.5. Introducing habit formation under linear-quadratic utility
   6.3. Dynamic benchmark in the crossover approach to the current account
     6.3.1. Consumption-smoothing current account path under certainty equivalence
     6.3.2. Consumption-smoothing current account path under certainty equivalency and limited capital mobility
     6.3.3. Adjusting for consumption tilting under linear-quadratic utility
     6.3.4. Adjusting for consumption tilting under power utility
     6.3.5. Introducing habit formation under linear-quadratic utility
   6.4. Conclusion
   6.A. Appendix to section 6.1
   6.B. Appendix to section 6.2
   6.C. Appendix to section 6.3
