## CONTENTS

### INTRODUCTION

1. **DIE CASTING CHARACTERISTICS**
   1.1 Die casting principle
   1.2 Technical and economic aspects of die casting
     - 1.2.1 Die Casting Positives
     - 1.2.2 Die Casting Negatives
     - 1.2.3 Economical Comparison
   1.3 Die casting machines
     - 1.3.1 Optimum size of die casting machine
   1.4 Hydrodynamic based of liquid metal flow in a mold cavity
   1.5 Progressive trends of die casting

2. **DIE CASTING TECHNOLOGICAL FACTORS**
   2.1 Pressing mechanism parameters
     - 2.1.1 Plunger Pressing Speed during the Casting Cycle
     - 2.1.2 Specific Pressure on Alloy during the Casting Cycle
     - 2.1.3 Mold Cavity Filling Time
   2.2 Analysis of influence of pressing speed and increase pressure upon the values of mechanical properties
     - 2.2.1 Evaluation of Permanent Deformation
     - 2.2.2 Macroscopic Analysis of Porosity
     - 2.2.3 Analysis of Achieved Results
     - 2.2.4 RTG – Analysis
     - 2.2.5 Evaluation of Hardness
   2.3 Experimental Monitoring of HB Hardness and Ultimate Tensile Strength
     - UTS of Pressure of Al-Si Castings Depending on the Increase Pressure Changes
     - 2.3.1 Experimental methodic and applied materials
     - 2.3.2 Analysis of the achieved results
   2.4 Casting thermal factors
   2.5 Gating system and mold venting
     - 2.5.1 Design of a Mold Gating System
     - 2.5.2 Design of a Mold Venting System
   2.6 Analysis of influence of casting position in a mold, of pressing speed, and of a met temperature upon ultimate tensile strength $R_m$
     - 2.6.1 Methodology of Experiments
     - 2.6.2 Achieved Results and their Analysis
   2.7 Effect of a gases molten in alloys
   2.8 Lubricant effect upon gas mode of a mold

Bibliografische Informationen

http://d-nb.info/1059134276
2.9 Influence of Hydrogen Content and Solidifying Speed upon Volume of Pores in a Casting

2.10 Liquid metal batch per one casting operation

2.11 Analysis of tablet height influence in filling chamber upon casting Porosity

2.11.1 Porosity Evaluation

2.12 Crystallization of aluminium alloys

2.12.1 Influence of Cooling Conditions upon Structure and of Al-Si Alloys

2.12.2 Formation of Dendritic Structure – Secondary Spacing DAS

2.12.3 Influence of Pressure upon Crystallization Parameters

2.13 Vacuum treatment of casting mold

2.13.1 Aspects of Implementation of Vacuum Treatment of Die Casting Mold

2.13.2 Requirements on Molds in Vacuum Treatment of Die Casting Molds

2.13.3 Advantages of Vacuum Process

2.14 Analysis of Influence of Casting Mold Vacuum Treatment upon Porosity of Castings

3 DIE CASTING DEFECTS

3.1 Classification of casting defects

3.2 Defects types of castings and causes of their occurrence

3.2.1 Shape, Dimensions and Weight Defects

3.2.2 Surface Defects

3.2.3 Continuity Interruption

3.2.4 Cavities

3.2.5 Macroscopic Inclusions and Macrostructure Defects

3.2.6 Structure Defects

3.2.7 Chemical Composition Defects, Incorrect Physical or Mechanical Properties

3.3 Experimental analysis of inner quality of die castings made from Al-Si based alloys

3.3.1 Experimental specimens and experiments methodology

3.3.2 Structure analysis

3.3.3 Fracture Process Analysis

3.3.4 Foundry Defects Analysis
