TABLE OF CONTENTS

LIST OF TABLES.........................................................................................................................v
LIST OF FIGURES........................................................................................................................vii
ABBREVIATIONS AND ACRONYMS.............................................................................................viii

1. INTRODUCTION..........................................................................................................................1
  1.1. Background.............................................................................................................................1
  1.2. Problem statement...................................................................................................................3
  1.3. Research objectives...............................................................................................................5
  1.4. Research questions...............................................................................................................6
  1.5. Research hypotheses.............................................................................................................6
  1.6. Methodology of the study.......................................................................................................7
  1.7. Significance of the study.........................................................................................................7
  1.8. Structure of the dissertation..................................................................................................8

2. CLIMATE CHANGE AND AGRICULTURE.............................................................................9
  2.1. Climate change and agriculture in the global context ............................................................9
    2.1.1. Climate change impacts on agriculture ...........................................................................10
    2.1.2. Climate change adaptations in agriculture ....................................................................14
  2.2. Climate change and agriculture in the Nepalese context ......................................................17
    2.2.1. Overview of Nepalese agriculture .................................................................................18
    2.2.2. Climate change in Nepal ..............................................................................................20
    2.2.3. Climate change impacts on Nepalese agriculture .........................................................23
    2.2.4. Climate change adaptations in Nepalese agriculture ....................................................25

3. STUDY AREAS AND RESEARCH DESIGN...........................................................................27
  3.1. Study areas............................................................................................................................27
  3.2. Research design....................................................................................................................31
    3.2.1. Data collection techniques ..............................................................................................31
    3.2.1.1. Collection of the primary data .....................................................................................31
    3.2.1.1.1. Key informant interviews .......................................................................................31
    3.2.1.1.2. Focus group discussions .........................................................................................32
    3.2.1.1.3. Household survey ...................................................................................................32
    3.2.1.1.3.1. Sample size and sampling procedure for the household survey ........................................33
    3.2.1.1.3.2. Characteristics of the farmers selected for the household survey .........................33
    3.2.1.1.3.3. Questionnaire for the household survey ..............................................................33
    3.2.1.1.3.4. Enumerators for the household survey .................................................................34
**TABLE OF CONTENTS**

3.2.1.2. Collection of the secondary data ........................................... 34
3.2.2. Data analysis and interpretation .................................................. 36

4. FIELD STUDY FINDINGS ........................................................................ 39
4.1. Socio-economic characteristics of the respondent households ............... 39
   4.1.1. Overview of the respondent households ....................................... 39
   4.1.2. Social inclusion ........................................................................ 40
   4.1.3. Employment status ..................................................................... 40
4.2. Farm profile of the respondent households ........................................... 41
   4.2.1. Landholding .............................................................................. 41
   4.2.2. Livestock holding ........................................................................ 42
4.3. Farming systems ................................................................................ 43
   4.3.1. Growing seasons ......................................................................... 43
   4.3.2. Land use ................................................................................... 44
   4.3.3. Traction ..................................................................................... 48
   4.3.4. Irrigation .................................................................................... 49
   4.3.5. Crop yield and price .................................................................. 50
   4.3.6. Economics of crop production ................................................... 53

5. FARMERS’ PERCEPTIONS OF AND RESPONSES TO CLIMATE CHANGE ........ 57
5.1. Farmers’ perceptions of climate change .............................................. 57
5.2. Effects of climate change .................................................................. 60
5.3. Climate change impacts on agriculture in the study areas ...................... 60
5.4. Farmers’ responses to climate change ............................................... 63
   5.4.1. Irrigation management ............................................................... 64
   5.4.2. Cropping system improvement .................................................. 64
   5.4.3. Soil management ....................................................................... 65
   5.4.4. Landscape management ............................................................. 65
   5.4.5. Post-harvest management .......................................................... 65
   5.4.6. Other strategies ......................................................................... 66
   5.4.7. Farmers’ group activities ............................................................ 66
5.5. Policy level interventions for adapting to climate change in agriculture .... 66
   5.5.1. Weather forecast ....................................................................... 67
   5.5.2. Irrigation development ............................................................... 67
   5.5.3. Technology development ............................................................ 67
   5.5.4. Other interventions ................................................................. 68
5.6. Conclusion ......................................................................................... 68
# TABLE OF CONTENTS

6. CLIMATOLOGY OF THE STUDY AREAS ............................................. 71  
   6.1. Characteristics of the climate variables in the study districts .......... 71  
   6.2. Inter-annual changes in rainfall and temperature ........................ 75  
   6.3. Conclusion ........................................................................... 79  

7. CROP YIELD RESPONSES TO CLIMATE CHANGE .............................. 81  
   7.1. Regression analysis .............................................................. 81  
      7.1.1. Regression model .......................................................... 82  
      7.1.2. Descriptions of the data ................................................. 86  
      7.1.2.1. Crop yield ............................................................... 86  
      7.1.2.2. Climate variables ...................................................... 89  
      7.1.3. Regression results ....................................................... 90  
   7.2. Crop yield responses to climate variables under different climate change scenarios ................................................................. 95  
   7.3. Conclusion ........................................................................... 97  

8. MATHEMATICAL PROGRAMMING MODEL FOR ACCOUNTING  
   CLIMATE RISK IN FARMERS' PRODUCTION DECISIONS ....................... 99  
   8.1. Mathematical programming model .......................................... 99  
      8.1.1. Structure of the mathematical programming model ............... 100  
      8.1.1.1. Objective function .................................................... 101  
      8.1.1.2. Calculation of the expected total gross margin ............... 102  
      8.1.1.3. Calculation of the standard deviation of total gross margin .. 103  
      8.1.1.4. Prediction of the annual change in crop yields ............... 105  
      8.1.1.5. Calculation of the risk aversion coefficient ................. 106  
      8.1.1.6. Land constraint ....................................................... 107  
      8.1.1.7. Household food requirement ....................................... 107  
      8.1.2. Model run .................................................................. 108  
   8.2. Overview of the variables and parameters in the model .............. 109  

9. MATHEMATICAL PROGRAMMING MODEL RESULTS .......................... 115  
   9.1. Impacts of climate risk on farm income and farmers’ production  
      decisions ............................................................................. 115  
   9.2. Impacts of climate risk on farmers’ production decisions in five climate change scenarios ................................................................. 118  
   9.3. Need of climate change adaptation techniques ............................ 122  
   9.4. Limitations of the model results ........................................... 123  
   9.5. Conclusion ........................................................................... 124
## 10. SUMMARY, CONCLUSIONS AND RECOMMENDATIONS

### 10.1. Summary
- 10.1.1. Background of the research
- 10.1.2. Research methodology
- 10.1.3. Major findings of the field study
- 10.1.4. Empirical findings (model results)

### 10.2. Conclusions

### 10.3. Recommendations
- 10.3.1. Policy recommendations
- 10.3.2. Recommendations for future researches

### GERMAN SUMMARY (ZUSAMMENFASSUNG)

### REFERENCES

### ANNEXES
