- List of figures .......................................................... VII
- List of tables ............................................................ XIV
- List of abbreviations and acronyms ................................ XVII

## 1 General introduction ............................................. 1

## 2 State of the art in science and technology ................. 3

### 2.1 Iodine ............................................................. 3

### 2.2 Iodine in humans ............................................... 5

### 2.3 Iodine in the ecosystem ...................................... 13

### 2.4 Iodine biofortification ........................................ 19

## 3 Material and methods ........................................... 23

### 3.1 Vegetable species ............................................. 23

### 3.2 Application technique for iodine salts .................... 24

#### 3.2.1 Soil application ........................................... 24

#### 3.2.2 Foliar application ......................................... 26

### 3.3 Sampling and sample preparation .......................... 28

#### 3.3.1 Plant material ............................................ 28

#### 3.3.2 Soil samples ............................................... 31

### 3.4 Standard analytical methods ................................ 33

#### 3.4.1 Soil pH ..................................................... 33
3.4.2 Organic matter.................................................................................................................33
3.4.3 Determination of soluble N, P and K in soil matrix.........................................................34
3.5 Analytical procedures for iodine determination.......................................................................35
3.5.1 Digestion of plant matrix.................................................................................................35
3.5.2 Iodine detection in alkaline matrix....................................................................................37
3.5.3 Quality assessment and quality control of iodine determination in plant matrix.................................39
3.5.4 Extraction and detection of iodine in soil matrix..................................................................42
3.6 Statistical procedures............................................................................................................43

4 Iodine biofortification by means of soil fertilization.................................................................51

4.1 Abstract.................................................................................................................................51
4.2 Introduction.............................................................................................................................52
4.3 Experimental setup................................................................................................................54
4.4 Results...................................................................................................................................59
4.4.1 Experiment no. 1: Influence of a one-time iodine soil fertilization over time on selected crops.........................................................................................................................59
4.4.2 Experiment no. 2: Iodine accumulation behavior of different vegetable species..................68
4.4.3 Experiment no. 3: Influence of different soil pH-levels on the iodine accumulation behavior of butterhead lettuce...............................................................................................................71
4.4.4 Experiment no. 4: Comparison of soil vs. foliar fertilization technique on two model crops.................................................................................................................................74
4.5 Discussion...............................................................................................................................77
4.5.1 Crop yield and marketable quality as affected by iodine soil fertilization............................77
4.5.2 Influence of a one-time iodine soil fertilization over time on different crops......................78
4.5.3 Iodine uptake and distribution in some vegetable crops.......................................................81
4.5.4 Iodine accumulation in butterhead lettuce as affected by soil pH-level..............................82
4.5.5 Efficiency comparison of soil versus foliar fertilization technique.......................................84
5 Iodine biofortification by means of foliar sprays

5.1 Abstract

5.2 Introduction

5.3 Experimental setup

5.3.1 Determination of total calcium in plant matrix

5.3.2 Determination of total phenolic compounds

5.3.3 Microscopic methods

5.4 Results

5.4.1 Experiment no. 5: Comparison of the iodine accumulation behavior between different vegetable crops as affected by iodine foliar sprays at varied doses and forms

5.4.2 Experiment no. 6: Comparison of the iodine absorption behavior of some potted herb species grown in greenhouses as affected by varied iodine foliar sprays

5.4.3 Experiment no. 7: Miscibility of agrochemicals with iodine and influence of the application time and mode on the iodine accumulation behavior of butterhead lettuce

5.4.4 Experiment no. 8: Effects of iodine foliar sprays on the phenolic content of two multi-leaf lettuce varieties

5.4.5 Iodine distribution in different plant parts of butterhead lettuce and kohlrabi

5.4.6 Leaf surface topography of some vegetable species

5.5 Discussion

5.5.1 Crop yield and marketable quality as affected by iodine foliar fertilization

5.5.2 Iodine accumulation in different vegetable crops as affected by foliar sprays at varied iodine doses

5.5.3 Iodine accumulation behavior of some culinary herbs cultivated in greenhouses

5.5.4 Miscibility of agrochemicals with iodine and influence of the application time and mode on the iodine accumulation behavior of butterhead lettuce
