

Contents

Safety Assessment Methods	1
Automatic architecture hardening using safety patterns <i>Kevin Delmas, Rémi Delmas and Claire Pagetti</i>	3
On Traceability of Informal Specifications for Model- Based Verification <i>Marco Filax, Tim Gonschorek, Michael Lipaczewski and Frank Ortmeier</i>	11
Challenges in providing support for management of evidence- based arguments <i>Janusz Gorski, Aleksander Jarzebowicz, Jakub Miler and Andrzej Wardziński</i>	19
The OpenAltaRica project <i>Michel Batteux, Antoine Rauzy and Paul Labrogère</i>	27
Tools for Safety Assessment	29
Anatomy of the Open-PSA model exchange format <i>Antoine Rauzy</i>	31
Case study of a landing gear system safety analysis by using MBSA <i>Xiaoxun Li, Duo Su and Shaojun Li</i>	35
A Dataflow Notation for SAML - Formal Modelling With- out Fearing Timing Constraints <i>Robert Heumüller, Michael Lipaczewski and Frank Ortmeier</i>	43
Model-based safety assessment: How to improve results analysis? Fault tree generation from a list of min- imal cut sets <i>Jean-Pierre Heckmann, Laurent Sagaspe and Julien Niol</i>	51

Tutorial Papers	59
FAME: A Model-Based Environment for FDIR Design in Aerospace <i>Benjamin Bittner, Marco Bozzano, Alessandro Cimatti, Régis De Ferluc, Marco Gario, Andrea Guiotto and Yuri Yushstein</i>	61
VECS: Verification Environment for Critical Systems <i>Tim Gonschorek, Marco Filax, Michael Lipaczewski and Frank Ortmeier</i>	63
Modelling and Analysis of Faults in SysML <i>Zoe Andrews, Richard Payne and Alexander Ro- manovsky</i>	65
