List of Figures  
List of Tables  
List of Abbreviations

1 Introduction

2 Literature

2.1 Foamy virus, the extraordinary retrovirus

2.1.1 Molecular biology of foamy virus

2.1.1.1 Virion structure

2.1.1.2 Organization of the genome

2.1.1.3 Gene expression

2.1.1.4 Viral proteins

2.1.1.5 Foamy virus life cycle

2.1.2 Foamy virus persistence

2.1.3 Foamy virus prevalence

2.1.4 Evolution of foamy virus

2.1.5 Modalities of foamy virus transmission in the natural host

2.1.6 Cross-species transmission of foamy virus

2.1.7 Foamy virus super-infections – definition and diagnostics

2.2 Chimpanzees

2.2.1 Overview about chimpanzees

2.2.2 Field sites

2.2.2.1 Budongo chimpanzees

2.2.2.2 Ta’i chimpanzees

2.2.3 Simian foamy virus infection in chimpanzees – Subject of this study

3 Material and Methods

3.1 Overview Materials

3.1.1 Chemicals

3.1.2 Buffer
3.1.3 Kits ................................................................. 26
3.1.4 Consumables ..................................................... 27
3.1.5 Technical equipment .......................................... 28
3.1.6 Software .......................................................... 29
3.2 Sample description ............................................... 30
3.3 Molecular biology analyses ..................................... 34
3.3.1 Nucleic acids’ extraction and cDNA generation ............ 34
3.3.2 Initial PCR screening .......................................... 34
3.3.3 DNA/RNA quantification ...................................... 35
3.3.4 End-point dilution PCR ........................................ 37
3.3.5 Bulk-PCR and cloning ......................................... 37
3.4 Sequence analyses ............................................... 37
3.4.1 Sequence processing ........................................... 37
3.4.2 Recombination analysis ....................................... 38
3.4.3 Sequence distance .............................................. 38
3.5 Phylogenetic analyses ............................................ 38
3.5.1 Evolutionary relationship of simian foamy virus within hosts .... 38
3.5.2 Evolutionary relationship of simian foamy virus among great apes ... 38
3.5.3 Test for suspicious triple infections .......................... 39
3.6 Statistical Analyses ............................................... 39
3.6.1 Mismatch distribution-based identification of single/super-infections ... 39
3.6.1.1 Reasoning line ............................................ 39
3.6.1.2 Power analyses ........................................... 41
3.6.1.2.1 Influence of the number of bulk-PCR products ....... 41
3.6.1.2.2 Simulation of triple infections ......................... 42
3.6.2 Influencing factors on super-infection status ................ 42
3.6.3 Effects of social relationships on simian foamy virus distribution ... 43
3.7 Network Analyses ............................................... 44
3.7.1 Network-based identification of founder strains of simian foamy virus ... 44
3.7.1.1 Reasoning line ............................................ 44
3.7.1.2 Power analysis ........................................... 45
3.7.2 Other networks .................................................. 47
3.8 Molecular evolution and substitution processes 47
3.9 Estimation of virus persistence 47
3.10 Nucleotide sequence accession numbers 48

4 Results 49
4.1 Detection of simian foamy virus diversity within a given host 49
   4.1.1 Quantification of retroviral loads in feces 49
   4.1.2 End-point dilution PCR 49
      4.1.2.1 Sequence generation 49
      4.1.2.2 Identification of single/super-infections 51
   4.1.3 Bulk-PCR product cloning and sequencing 53
      4.1.3.1 Sequence generation 53
      4.1.3.2 Identification of single/super-infections 57
   4.1.4 Identification of founder sequences 60
   4.1.5 Simulated triple infections 66
4.2 Transmission modalities of simian foamy virus 71
   4.2.1 Sequence generation 71
   4.2.2 Sequence analyses 71
      4.2.2.1 Identification of single/super-infections 71
      4.2.2.2 Identification of simian foamy virus diversity within the community 73
   4.2.3 Transmission patterns of simian foamy virus 76
   4.2.4 Persistence of simian foamy virus 78
   4.2.5 Accumulation dynamics of simian foamy virus 80
   4.2.6 Molecular evolution of simian foamy virus 82

5 Discussion 84
5.1 Evaluation of super-infection diagnostics 84
   5.1.1 End-point dilution PCR 84
   5.1.2 Bulk-PCR product cloning and sequencing 84
5.2 Transmission modalities of simian foamy virus 88
5.3 Conclusions and outlook 91

6 Summary 93
