Abstract xi

Zusammenfassung xiii

1 Introduction 1
  1.1 Carbon ion radiotherapy 1
  1.2 Scope of the present thesis 3
    1.2.1 Investigations on passive and active beam delivery systems 3
    1.2.2 Investigations on RBE predictions of LEM I and LEM IV 4
  1.3 Impact of the present study 5
  1.4 Outline of the thesis 6

2 Physical and biological basics of carbon ion radiotherapy 7
  2.1 Energy deposition and dose 7
    2.1.1 Dose definitions 7
    2.1.2 Stopping of high-energy ions 8
    2.1.3 Linear Energy Transfer (LET) 8
    2.1.4 Energy loss and range straggling 9
    2.1.5 Lateral beam spread 10
    2.1.6 Nuclear fragmentation 10
  2.2 The accelerator 11
    2.2.1 Ion sources 12
    2.2.2 Low energy beam transport 12
    2.2.3 Linear accelerator 12
    2.2.4 Middle energy beam transport 13
    2.2.5 Synchrotron and high energy beam transport 13
    2.2.6 Treatment rooms 13
  2.3 Beam delivery systems 15
    2.3.1 Passive beam delivery (on the example of NIRS) 16
    2.3.2 Active beam delivery (on the example of HIT) 19
  2.4 Relative biological effectiveness (RBE) 21
    2.4.1 Microscopic track structure and radial dose distribution of ion beams 22
    2.4.2 DNA damage and cell inactivation, Linear-quadratic model 25
    2.4.3 Definition of RBE 27
2.4.4 Dependencies of RBE .................................................. 27
2.5 Radiobiological models .................................................. 29
  2.5.1 Radiobiological modeling at NIRS ................................. 29
  2.5.2 Radiobiological modeling at HIT ................................. 31
2.6 Treatment planning in carbon ion radiotherapy ...................... 37

3 Materials and Methods .................................................. 39
  3.1 Investigations on passive and active beam delivery systems at NIRS and at HIT ............................................. 39
    3.1.1 Patient characteristics and original clinical treatment planning ............................................. 39
    3.1.2 Recalculation of treatment plans .................................. 39
      3.1.2.1 Modifications of original clinical treatment plans .................................. 39
      3.1.2.2 Recalculation of treatment plans at NIRS .................................. 41
      3.1.2.3 Recalculation of treatment plans at HIT .................................. 42
    3.1.3 Analysis of RBE-weighted dose distributions calculated at NIRS and at HIT ............................................. 42
      3.1.3.1 Analysis / Read-out of dose distributions .................................. 42
      3.1.3.2 Comparison of dose distributions .................................. 43
  3.2 Investigations on RBE predictions by LEM I and LEM IV .............. 45
    3.2.1 Patient characteristics and treatment planning ...................... 45
      3.2.1.1 Patient collective .................................. 45
      3.2.1.2 Volume definitions .................................. 45
      3.2.1.3 Dose prescription .................................. 45
      3.2.1.4 Dose rescaling .................................. 46
      3.2.1.5 Original treatment plans .................................. 46
      3.2.1.6 Recalculation of treatment plans using LEM IV .................................. 47
      3.2.1.7 Validation of recalculation process .................................. 48
    3.2.2 Qualitative and quantitative comparison of original (LEM I-based) and recalculated (LEM IV-based) RBE-weighted dose distributions ............................................. 48
    3.2.3 Assessment of tolerances to radiation-induced temporal lobe reactions predicted by LEM I and LEM IV ...................... 50
      3.2.3.1 Clinical follow-up .................................. 50
      3.2.3.2 Multivariate statistical analysis of DVH variables .................................. 50
      3.2.3.3 Dose-response analysis .................................. 52

4 Results ........................................................................ 53
  4.1 Investigations on passive and active beam delivery systems at NIRS and at HIT ............................................. 53

6 Conclusions and Outlook

6.1 Investigations on passive and active beam delivery systems
   6.1.1 Conclusions
   6.1.2 Outlook

6.2 Investigations on RBE predictions by LEM I and LEM IV
   6.2.1 Conclusions
   6.2.2 Future clinical implementation of LEM IV
   6.2.3 Outlook

A Appendix

A.1 Detailed quantitative analysis of passive and active beam delivery systems at NIRS and at HIT
A.2 Detailed quantitative analysis of RBE predictions by LEM I and LEM IV
