## Content

### Abstract

### Zusammenfassung

1 Introduction ............................................................................................................................... 1

1.1 Washing process ...................................................................................................................... 1

1.1.1 Mechanics ............................................................................................................................. 2

1.1.2 Temperature .......................................................................................................................... 3

1.1.3 Washing time ....................................................................................................................... 3

1.1.4 Chemistry ............................................................................................................................. 4

1.2 Washing machines .................................................................................................................. 4

1.2.1 Horizontal axis washing machine ...................................................................................... 5

1.2.2 Vertical axis washing machine ............................................................................................ 6

1.2.2.1 Impeller (pulsator) type washing machine ................................................................... 6

1.2.2.2 Agitator type washing machine ..................................................................................... 6

1.2.3 Washing machine markets and trends .................................................................................. 6

1.2.4 Resource consumption for washing purposes ....................................................................... 7

1.2.4.1 Electricity consumption ................................................................................................. 7

1.2.4.2 Water consumption ....................................................................................................... 8

1.2.5 Consumer behavior in use of washing machines .................................................................. 9

1.2.5.1 Washing frequency ....................................................................................................... 10

1.2.5.2 Loading of the washing machine .................................................................................... 11

1.2.5.3 Use of washing temperature and program .................................................................... 12

1.3 Sustainability .......................................................................................................................... 12

1.4 Demographic trends .............................................................................................................. 13

1.5 Modeling approaches ............................................................................................................ 14

2 Objective ..................................................................................................................................... 17

3 Material and methods ............................................................................................................... 19

3.1 Material ................................................................................................................................... 19

3.1.1 Tested washing machines ................................................................................................. 19

3.1.2 Washing machine used for standardization and neutralization ......................................... 19

3.1.3 Test load ............................................................................................................................. 20
3.1.4 Detergent ........................................................................................................ 20
3.1.5 Software ........................................................................................................ 21

3.2 Methods ............................................................................................................ 21

3.2.1 Washing machines tests ................................................................................. 21
  3.2.1.1 Load ......................................................................................................... 21
  3.2.1.2 Detergent dosing ..................................................................................... 22
  3.2.1.3 Temperature/program ............................................................................. 22
  3.2.1.4 Normalization and conditioning .............................................................. 23
  3.2.1.5 Reproduction tests .................................................................................. 24
  3.2.1.6 Evaluation of the soil strips .................................................................... 24
  3.2.1.7 Calculation the washing performance index .......................................... 24
  3.2.1.8 Testing conditions .................................................................................. 25

3.2.2 Construction of the model of a virtual washing machine ............................ 25
  3.2.2.1 Calculations of the consumption in CO₂ equivalents ............................. 26

3.2.3 Construction of the model of virtual washing household ............................. 28

3.2.4 Combination of virtual washing household and virtual washing machine 30
  3.2.4.1 Correction of the detergent amount ......................................................... 31
  3.2.4.2 Scenario used for simulation ................................................................. 31

3.2.5 Average values calculations ......................................................................... 32

4 Results .................................................................................................................... 33

4.1 Results of the washing machines tests ............................................................... 33
  4.1.1 Water consumption ..................................................................................... 33
  4.1.2 Energy consumption .................................................................................. 36
  4.1.3 Washing performance ............................................................................... 37
  4.1.4 Duration of the main wash ....................................................................... 39
  4.1.5 Washing temperature: nominal versus actual washing temperature ....... 40

4.2 Construction of model of virtual washing machine ........................................ 41
  4.2.1 Water consumption equation ................................................................. 41
  4.2.2 Energy consumption equation ................................................................. 43
  4.2.3 Detergent consumption equation .............................................................. 45

4.3 Results of the virtual washing household modeling approach ....................... 47

4.4 Results of yearly simulations .......................................................................... 50
