

THE INTERNAL MULTIPHASE TARGET FOR STORAGE RING EXPERIMENTS

Dissertation
zur Erlangung des Doktorgrades
der Naturwissenschaften

vorgelegt beim Fachbereich Physik
der Johann Wolfgang Goethe - Universität
in Frankfurt am Main

von
Nikolaos Petridis
aus Frankfurt am Main

Frankfurt am Main 2014
(D 30)

CONTENTS

I. INTRODUCTION	11
1. MOTIVATION	13
II. METHOD	19
2. EXPERIMENTAL SETUP	21
2.1. Accelerator Facility	21
2.2. Experimental Storage Ring (ESR)	22
2.3. Internal Target Station	24
2.3.1. Inlet Chamber	26
2.3.2. Interaction Chamber	27
2.3.3. Target Dump	27
2.3.4. Target Source	28
2.3.5. Infrastructure	31
2.4. CCD Cameras	33
3. TARGET OPERATION	35
3.1. Preparation and maintenance	35
3.2. Nozzle calibration	35
3.3. Cryostat operation	37
3.3.1. Continuous flow cryostat	37
3.3.2. Closed cycle cryostat	38
3.4. Target beam alignment	38
III. MEASUREMENT	41
4. CHARACTERIZATION OF THE TARGET	43
4.1. Target beam generation	43
4.1.1. Supersonic gas jets	44

4.1.2. Cluster beams	49
4.1.3. Liquid droplet beams	53
4.2. Calculation of the target density	54
4.2.1. Interaction length	55
4.3. Experimental method	59
4.4. Results	65
4.4.1. Pinhole orifice nozzle	65
4.4.2. Trumpet-shaped nozzle	74
4.4.3. Nozzle comparison	78
4.5. Conclusion	79
5. ENERGY LOSS MEASUREMENTS	83
5.1. Schottky Noise Analysis	83
5.2. Experimental method	87
5.3. Results	88
5.3.1. Pressure increase in the interaction chamber	91
5.3.2. Correction of the dump pressure data	95
5.3.3. Overlap-Factor	98
5.4. Conclusion	101
6. ELECTRON COOLER PERFORMANCE	105
6.1. Theoretical background	105
6.2. Experimental method	108
6.3. Results	109
6.4. Conclusion	111
7. SURPRISING OPTICAL LIGHT PHENOMENA	115
7.1. Experimental method	115
7.2. Light spectrum of the interaction region	116
7.3. Results	117
7.4. Conclusion	121
IV. CLOSING	123
8. SUMMARY	125
9. OUTLOOK	129

V. APPENDICES	133
A. FORMULARY	135
A.1. Calculation of the target area density	135
A.1.1. Calculation of the target beam velocity	136
A.2. Nozzle calibration	136
A.3. Mass flow through the nozzle	136
A.4. Data acquisition conversion formulas	137
B. ENERGY LOSS DATA	139
B.1. U^{89+} at 118 MeV/u	140
B.2. U^{91+} at 214 MeV/u	141
B.3. U^{91+} at 397 MeV/u	142
B.4. Kr^{35+} at 30 MeV/u	143
C. ELECTRON COOLER PERFORMANCE DATA	147
C.1. U^{89+} at 118 MeV/u	148
C.2. U^{91+} at 214 MeV/u	149
C.3. U^{91+} at 397 MeV/u	151
C.4. Kr^{35+} at 30 MeV/u	152
D. COLLECTION OF OBSERVED LIGHT TRACES	155
D.1. Pictures taken with PCO and Hamamatsu	156
D.2. Pictures taken with Hamamatsu	164
