Contents

1 Introduction 1

2 Theoretical background 5

2.1 Supermodes of a planar dual-slab waveguide 5

2.1.1 Linear wave equation: TE and TM polarization 6

2.1.2 Field distribution and dispersion relation 8

2.2 Electromagnetic gradient forces 11

2.2.1 Optical power and normalization 12

2.2.2 Maxwell stress tensor approach 12

2.3 Elastic deflection of a thin plate 15

2.3.1 Plate strip with uniform thickness 16

2.3.2 Plate strip with nonuniform thickness 17

2.4 Effective index method and local mode approach 17

2.5 Beam propagation inside nonlinear medium 21

2.5.1 Local nonlinear response 21

2.5.2 Nonlocal nonlinearity model 23

3 Analysis of optomechanical phenomena in dual-web fibers 27

3.1 Self-channeling of light 27

3.1.1 Iterative technique 28

3.1.2 Steady-state solutions 30

3.1.3 Optomechanical nonlinearity 32
3.1.3.1 Power dependence of the modal index and nonlinear coefficient .......................... 33
3.1.3.2 Broadband behaviour ................................................. 35

3.1.4 Estimation of thermal effects ........................................... 36
3.1.4.1 Thermal vibration .................................................. 36
3.1.4.2 Thermal nonlinear optical effect .................................. 38

3.2 Dynamics of the self-channeled optical modes ................................................. 39
3.2.1 Mathematical model and nonlocality ............................................. 39
3.2.2 Highly nonlocal limit .................................................. 42
3.2.2.1 Harmonic oscillator-like equation .................................. 42
3.2.2.2 Nonlinear phase shift ............................................... 44
3.2.2.3 Breathing dynamics .................................................. 46
3.2.3 Regime of finite nonlocality .............................................. 48
3.2.3.1 Hamiltonian and variational approach ............................... 48
3.2.3.2 Modulational instability ............................................. 49
3.2.4 Soliton formation and dynamics of propagation ........................................... 50

3.3 Summary of Chapter 3 .................................................. 54

4 Experimental techniques .................................................. 57
4.1 Fiber fabrication and characterization ............................................. 57
4.1.1 Stack-and-draw technique .............................................. 58
4.1.2 Influence of preform geometry and drawing parameters on dual-web fiber structure ....... 61
4.1.3 Guiding vs. antiguiding web thickness profile ........................................ 63
4.1.4 Experimental structures and their characterization ............................ 65
4.1.4.1 Guiding dual-web fiber #1 ........................................... 65
4.1.4.2 Guiding dual-web fiber #2 ........................................... 65

4.2 Experimental setup .................................................. 68
4.2.1 Mach-Zehnder interferometer ............................................. 68
4.2.2 Interferometric phase change ............................................ 69
5 Observation of nonlinear optomechanical interaction in dual-web fibers

5.1 Interferometric measurements and their interpretation
5.1.1 Retrieving optomechanical nonlinear coefficient
5.1.2 Lorentz-shaped resonant response
5.2 Investigation of mechanical properties of the fiber
5.2.1 FE modelling of mechanical resonances
5.2.2 The effect of frozen-in tension
5.3 Analysis of the optomechanical response
5.4 Summary of Chapter 5

6 Reconfigurable light-driven optoacoustic isolators in photonic crystal fibers

6.1 Motivation
6.2 Forward stimulated Brillouin scattering
6.3 Setup and operation principle
6.3.1 Principle of reconfigurable operation
6.3.2 Fiber-based experimental setup
6.3.3 Characteristics of the used solid-core PCF
6.4 Experimental results
6.4.1 Static optical attenuation and amplification
6.4.2 Dynamic optical switching
6.5 Summary of Chapter 6

7 Conclusions and Outlook

7.1 Optomechanical interaction in dual-web fibers
7.2 Optoacoustic interaction in solid-core PCF
