## Contents

Preface ................................................. 9

1  The concept of a machine tool ......................... 11

2  Development of the machine tool industry in 
   Germany, Japan and the United States ............. 21
   2.1 Development of sales in the 
       machine tool industry ....................... 21
   2.2 Export, import and domestic consumption ....... 31
   2.3 Conclusion .................................... 43

3  Innovations ........................................ 44
   3.1 Prerequisites and dependencies ................. 44
   3.2 Important innovations in the 
       machine tool industry ....................... 50
   3.3 The numerical control ........................ 55
   3.4 Cutting materials ................................ 70
   3.5 The development and application of the laser ... 83

4  Corporate structures ............................... 104
   4.1 Medium-sized companies are shaped by their founders ... 104
   4.2 The scarcity of early data ..................... 107
   4.3 Data from 1980 onward ....................... 108
   4.4 Conclusion .................................... 124

5  Education and training ............................ 127
   5.1 Schools ........................................ 128
   5.2 Apprenticeship training compared .............. 130
   5.3 Further vocational training in comparison .... 137
   5.4 Universities in international comparison ....... 143
   5.5 Conclusion .................................... 151
6 Scientific research and development ........................................ 152
6.1 The importance of science for the machine tool industry ........... 152
6.2 Science and research for machine tools in Germany ................. 156
6.3 Machine tool research in the United States .......................... 163
6.4 Machine tool research in Japan ....................................... 168
6.5 CIRP – International Academy for Production Engineering ....... 173
6.6 Comparative conclusion on the research environments ............ 174

7 Local conditions and site quality .................................... 176
7.1 Preliminary remarks .................................................. 176
7.2 Exchange rates and wages ........................................... 179
7.3 Taxes ................................................................. 186

8 State and associations .................................................. 195
8.1 Germany – Success through cooperation ............................ 196
8.2 Japan after 1945 – Reconstruction and market orientation ....... 203
8.3 The United States after 1945 – The fight to retain supremacy .... 214
8.4 Conclusion ............................................................ 221

9 Winners and losers – The fates of individual firms .................. 223
9.1 Cincinnati Milling Machines: The decline of a great company .... 223
9.2 Yamazaki: A successful family-owned company ..................... 231
9.3 Burgmaster-Houdaille: A victim of the financial industry ......... 246
9.4 Schiess: The burden of job shop production ......................... 259
9.5 Okuma: Japan Inc. .................................................... 268
9.6 Hermle: From a vision to success ................................... 275
9.7 Niles-Simmons-Hegenscheidt (NSH): Reflecting a globalized world 284
9.8 Summary .............................................................. 287
10 Conclusions and recommendations ............................................. 289
10.1 Preliminary remarks ......................................................... 289
10.2 Machine tool companies are demanding ............................... 290
10.3 The industry is cyclical ...................................................... 291
10.4 Innovations are crucial ..................................................... 293
10.5 Science is important ......................................................... 294
10.6 Patents are not always an advantage ................................... 296
10.7 Service is the key to all markets ......................................... 299
10.8 The benefits of the dual system .......................................... 302
10.9 The problem of duopolies ................................................. 304
10.10 Several production sites — a benefit or a burden? ................. 306
10.11 The optimal legal form for a company .............................. 310
10.12 State support ............................................................... 313

11 Résumé .............................................................................. 317
11.1 Summary ........................................................................... 317
11.2 A personal statement in conclusion .................................... 323

12 An autobiographical epilog .................................................... 326

Appendix
List of interviews conducted .................................................... 332
Bibliography ........................................................................... 333
List of references .................................................................... 340
