## Contents

**Foreword** Stefan Behnisch ........................................... 10

**Preface** Ulrich Pfammatter-Brugger .......................... 13

### 1

**Genius Loci - Unique Places in a State of Change** .............. 16

**Introduction** .............................................. 18

### 1.1 On the Place-ment of Building -

**New Identities** ........................................... 22

**Overview** ................................................. 23

**A** The Context and the Design of the Unique Place ........ 24

A/1 References to the Cultural Landscape and History ........ 24

A/2 References to Cityscapes and Urban Contexts ..... 27

A/3 References to the Natural Environment .................. 32

**B** Processes of Transformation -

Generating New Identities .................................... 38

B/1 Industrial Landscapes and Industrial Archaeology .... 38

B/2 The Reinvention of Former Docks ......................... 41

B/3 Urban Redevelopment Areas .............................. 44

**C** Virtual Reference and Meaning Systems ................. 46

C/1 Construction of a District ................................ 46

C/2 Reinforcing Existing Character .......................... 51

C/3 Implanting A Virtual World .............................. 54
1.2 Contextual Building Typologies in a Changing Culture and Climate

Overview

A Atria of the Future
A/1 Atria as New Communication Spaces
A/2 The Atrium as an Extension of Urban Space
A/3 The Atrium as Polyvalent Functional Zone

B Arcades and Urban Networks
B/1 Arcades Conquer Vertical Space
B/2 Integrating Arcades into the Urban Fabric
B/3 The Network as an Engine for Development

C City Malls – New Building Types for a Communication Society
C/1 Urban Interiors – Urban Extensions
C/2 “Solitary forms” as New Icons for a District
C/3 Temporary and Ephemeral Structures
Making a Memorable Place

1.3 Regional Identity and Cultural Techniques in Space, Construction, Material and Form

Overview

A Building in Alpine and Mountainous Zones
A/1 Reinterpretation of Traditional Building Forms
A/2 Developing Older Cultural Techniques
A/3 The Transformation of Village and Building Structures

B The Place and the Role of Material “As Found”
B/1 Inter-cultural Construction Technology
B/2 Earth Architecture
B/3 The Dramatisation of Local Scenery

C “Plus/minus 40 Degrees Latitude”
C/1 Learning from the Vernacular – a Perspective for the Future
C/2 Reconstruction and Traditional Cultural Techniques
C/3 Imitation and Interpretation
2
Building in Extreme Situations 122

Introduction 124

2.1 Adaptation Scenarios 128

Overview 129

A Flood Resistance and Mobility 130
A/1 Reconstruction Projects 130
A/2 Preventive Structures and Scenarios 133
A/3 Learning from the Vernacular 136

B Living with, and Resisting, Desertification 140
B/1 Earth Architecture: Resistance Against Sand Storms 140
B/2 Ancient Cultural Techniques 143
B/3 Visionary Projects 146

C Flexibility in the Event of an Earthquake 150
C/1 High-tech Solutions 150
C/2 Light-tech Strategies 153
C/3 Temporary Low-tech Structures 156

3
Space, Structure and the Climate Challenge 220

Introduction 222

3.1 Frameworks – Separation of Systems – Resource Conservation 226

Overview 227

A Constants and Variables 228
A/1 Structural Frame Systems as a Programme 228
A/2 Vernacular Architecture as a Source of Inspiration 231
A/3 Separation of Systems as a Sustainable Strategy 237

B Structuralism – Cultural and Environmental Influences on “Patterns of Life” 242
B/1 Socio-cultural Foundations 242
B/2 Spatial and Use Systems: Founding Principles – Development – Perspectives 245
B/3 Spatial and Constructional Typologies and Materiality 248

C Strategies for enduring spatial concepts, adaptable to future uses 252
C/1 Flexibility of Use and Life Cycle Strategies 252
C/2 Variable Spatial and Constructional Typology 255
C/3 Adaptability to Functional and Socio-cultural Change 258
2.2 “Avoidance strategies” — Prevention and Adaptation 160

Overview 161

A Reconstructable Building Structures for Emergency Situations 162
A/1 Non-locally Based Systems 162
A/2 Flexibility and Modularisation 165
A/3 Adaptable Structures for Polyvalent Uses 167

B Hybrid Systems for Extreme Climates 170
B/1 Systems, Modules and Elements 170
B/2 Constants and Variables 172
B/3 Synthesis: Low-tech and High-tech 174

C Global Models and Regional Translations 178
C/1 Temporary Infrastructure Projects 178
C/2 Shelter and Society 181
C/3 “Settled Nomads” 184

2.3 The Resistance of Structures to Environmental Forces, Natural Disasters and Other Events 188

Overview 189

A Buildings as a Part of the Environmental Dynamic 190
A/1 Traditional Cultures and their Technologies 190
A/2 Building Types for Extreme Climatic Fluctuations 192
A/3 Material Resistance and Technological Intelligence: Alpine Experiments for Protection Against Environmental Extremes 194

B Earthquakes, Storms, Catastrophes 198
B/1 Self-stabilising Building Systems 198
B/2 Earthquake Resistance: Concepts for Retro-fitting and Upgrading 201
B/3 Sustainable Experiments: Requirements for Skyscrapers 204

C Bulwarks Against Natural Hazards 208
C/1 Responsive and Symbolic Form Generation 208
C/2 Power Plants – Powerful Resistance: “Don’t fight forces – use them!” (Buckminster Fuller) 214
C/3 Resistance of Building Structures, Materials and Technology in Extreme Situations 217

3.2 Spatial Typology — Adaptation Strategies 262

Overview 263

A Environmental factors as “drivers of innovation” 264
A/1 Shading Concepts 264
A/2 Natural and Supported Ventilation Principles 267
A/3 Climate Protection Scenarios 270

B Building Typology as a Mirror of Cultural and Climatic Dynamics 274
B/1 Spatial and Use Scenarios: Cultural Change and Environmental Influences 274
B/2 “Transparency” – Space and Circulation Zones – Spatial Experience 277
B/3 Box Spaces and Spatial Economy: The “Raumplan” (“Space Plan”) of the Future? 280

C Spatial and Use Concepts for the Future 284
C/1 The Conquest of Space and Time 284
C/2 The “Continuous Space” 287
C/3 Experiments with Structured Spatial Forms 290

3.3 Spatial Climate Control 294

Overview 295

A The Building as an Integrated System 296
A/1 Concepts of Integration 296
A/2 High-tech versus Low-tech 302
A/3 Green buildings – Eco Cities 308

B Spatial Climate Zoning 326
B/1 “Form follows climate impact” 326
B/2 Building “Profiling” 329
B/3 Spatial Climate Layers – “Structure follows climate impact” 332

C Building Envelopes Under “Climatic Stress” 336
C/1 The Climate-Envelope Concept and the “Sustainability Aesthetic” 336
C/2 Spatial Climate Conditioning, Daylight Comfort and Environmental Dynamics 339
C/3 From Building Envelope to “Active Breathing Skin” 342
4
The Nature of Materials –
and the Future of
Materials Technology 346

4.1 Building Materials and
Technology in Transition 352

Overview 353

A The Modelling of Natural Building Materials 354
A/1 Timber as a Building Material 354
A/2 Bamboo, Straw and Reeds 357
A/3 Designing with Natural Stone Techniques 364

B Building Materials from Nature 368
B/1 Loam Construction Techniques 368
B/2 Iron – Steel – Aluminium: over 200 Years of
Innovative Development 371
B/3 Glass technology, Systems of Space and Form 377

C Composite Technologies 384
C/1 Metal-reinforced Timber Construction,
and Paper Tubes 384
C/2 Pre-stressed Structures 388
C/3 Hybrid Typologies 395

5
Architectural Memory:
Industrial Culture
and Transformation
Strategies 458

5.1 Industrial Heritage and
Sustainable Industrial Archaeology 464

Overview 465

A Criteria for Evaluating Industrial Heritage 466
A/1 Transport and Mobility – Influences on the Transfor-
mation of Iconic Buildings of the Industrial Age 466
A/2 Economic Change – Presenting Traces of Memory 469
A/3 The Re-evaluation of Former Industrial Areas 472

B Transformation models: Growth –
Reintroducing Nature – Densification 476
B/1 Growth Engines for Urban Developments 476
B/2 Bringing Nature and Integrated Spaces back to
Urban Areas 480
B/3 Densification Scenarios: Effective and Efficient
Resource Use and Functional Representation 483

C The Reinterpretation and Re-evaluation of
Architectural Memory 488
C/1 Ecological Concepts 488
C/2 Space – Time – Architecture: History as Reference 490
C/3 Climate-oriented Reinterpretation 492
### 4.2 Cultural Techniques: Resource Effectiveness + Resource Efficiency
