
Development of socio-economic fragility functions for
use in
worldwide rapid earthquake loss estimation procedures.

Zur Erlangung des akademischen Grades eines

DOKTOR-INGENIEURS

von der Fakultät für

Bauingenieur-, Geo- und Umweltwissenschaften

des Karlsruher Instituts für Technologie (KIT)

genehmigte

DISSERTATION

von

James Daniell

BE Civil/Structural (Hons.), BSc., MSc.

Geb. in Canberra, Australien

Tag der mündlichen Prüfung: 14.02.2014

Referent: Prof. Dr. Friedemann Wenzel

Koreferent: Prof. Dr. Kay Mitusch

Karlsruhe 2014

Table of Contents

ABSTRACT.....	V
KURZFASSUNG	VII
DANKSAGUNG / ACKNOWLEDGMENTS.....	X
TABLE OF CONTENTS	XIII
LIST OF FIGURES	XVII
LIST OF TABLES	XXIX
1 INTRODUCTION.....	1
1.1 Problem definition	2
1.2 Goals of the study	3
1.3 Limitations of the study	3
1.4 Organisation of the study	4
2 LITERATURE REVIEW	7
2.1 The Basics of Earthquake Loss Estimation	7
2.2 Hazard Analysis.....	9
2.2.1 Defining the magnitude and hypocentre location.....	9
2.2.2 Site measurement - Intensity-based.....	13
2.2.3 Site measurement - Spectra-based	17
2.2.4 The advantages and disadvantages of macroseismic intensity vs. spectral ordinate methods for rapid loss estimation	19
2.2.5 Secondary and Tertiary effects from earthquakes.....	21
2.3 Exposure Analysis	25
2.3.1 What is defined by exposed elements?	25
2.4 Vulnerability Analysis	29
2.4.1 Vulnerability Components	29
2.4.2 Vulnerability Methods	32
2.5 Existing Open Source Earthquake Loss Estimation Software that deal with Rapid Earthquake Loss Estimation	34
2.5.1 Using Global ELE Software Packages (OPAL) to review rapid loss estimation methodologies ..	35
2.5.2 ELER	39
2.5.3 PAGER.....	40
2.5.4 WAPMERR (QLARM).....	42
2.5.5 Other Rapid Loss Estimation Software Tools (REDAS, TELES, PLINIUS etc.)	42
2.6 Socio-economic Analysis	43
2.6.1 Population and Occupancy Modelling.....	43
2.6.2 Casualty Models.....	47
2.6.3 Shelter Models	51
2.6.4 Economic Modelling.....	52
2.7 Existing Historical Earthquake Consequence Databases	59
2.7.1 Global Databases.....	59
2.7.2 Regional and Country Databases	62

2.8	Socio-economic indicator and analysis studies	62
2.9	Conclusion and Scope of Work.....	65
3	THE PRODUCTION OF SOCIO-ECONOMIC BASED FRAGILITY FUNCTIONS FOR A DISCRETISED COUNTRY APPROACH	67
3.1	An important redefinition of loss versus cost	67
3.2	Social fragility functions	71
3.3	Economic fragility functions	83
4	CREATING A VIRTUAL EARTH FOR ANALYSIS	89
4.1	Introduction	89
4.2	The Infrastructure Inventory	90
4.2.1	Building Typologies	90
4.2.2	Roof typologies.....	95
4.2.3	Household Size and Labour Force distribution	96
4.2.4	Age Distribution of infrastructure.....	96
4.3	Population.....	99
4.3.1	Population Estimation.....	99
4.3.2	Urban and Rural Distribution	103
4.4	Production of Economic Exposure (Capital Stock, including Construction Cost)	106
4.5	Building a vulnerability index using existing fragility functions for fatalities	111
4.6	A Country-Based Seismic Code Index	114
4.6.1	Components and the history of Seismic Codes worldwide.....	114
4.6.2	Which countries have seismic codes?.....	117
4.7	A Country-Based Building Practice Factor	122
5	THE DEVELOPMENT OF NEW COUNTRY-BASED SOCIAL AND ECONOMIC INDICES	129
5.1	Spatial Distribution of data within each country.....	129
5.1.1	Former Republics	129
5.1.2	Point-based distributions	130
5.2	Temporal-spatial Social Indices	133
5.2.1	Life Expectancy	133
5.2.2	Literacy Rate and Enrolment Rate	135
5.2.3	Average and Expected Years of Schooling.....	137
5.3	The formation of the Hybrid Natural Disaster Economic Conversion Index from 1900-2012 via Production of Economic Indices.....	140
5.3.1	Background and Problem Definition.....	140
5.3.2	Exchange Rate Data.....	143
5.3.3	Global Unskilled Wage Index	145
5.3.4	Consumer Price Index.....	146
5.3.5	Gross Domestic Product (PPP and Nominal)	147
5.3.6	The Hybrid Index combining these components (HNDECI)	151
5.4	A complete country-based temporal-spatial Human Development Index – 1900-2012 ...	152
5.5	Natural Disaster HDI – 1900-2012	156

6	THE UPDATING AND IMPROVEMENT OF A GLOBAL HISTORICAL DAMAGING EARTHQUAKE DATABASE.....	159
6.1	A fundamental flaw in historical loss estimates.....	160
6.2	Background to the Database	167
6.3	Development of the Database	168
6.3.1	Methodology behind the database.....	168
6.3.2	Criteria for entry of an earthquake into the database	171
6.3.3	Parameters collected in the Database.....	172
6.4	Socioeconomic Losses (and Costs) from Earthquakes in the time range from 1900-2012	173
6.4.1	Casualties and Homelessness from Historical Earthquakes.....	174
6.4.2	Testing the time of day function through time.	179
6.4.3	Economic Costs from Historical Earthquakes.....	182
6.4.4	Secondary Effects from historical earthquakes	186
6.4.5	Indirect Losses from historical earthquakes	188
6.5	Reassessing losses through time using the difference of net versus gross capital stock and sectoral losses.....	189
6.5.1	Methodology	189
6.5.2	Sectoral Losses from Historical Earthquake Events	190
6.5.3	The first view of Direct Economic Losses and Costs from worldwide earthquakes from 1900-2012	192
6.6	Conclusion	194
7	VALIDATING THE EMPIRICAL MODEL FOR RAPID EARTHQUAKE FATALITY AND ECONOMIC LOSS & COST ESTIMATION.....	196
7.1	Methodology	196
7.1.1	Historical Observed Intensity Mapping.....	197
7.1.2	Combination with Socioeconomic Parameters	201
7.1.3	Joining similar countries together for analysis (Regionalisation Strategies)	203
7.1.4	Integration with Earthquake Report from 2010-2013	206
7.2	Social Damage (Casualties).....	207
7.2.1	Testing existing models using the new dataset.....	207
7.2.2	Production of fatality functions using the new dataset.....	213
7.2.3	Production of fatality functions – An example of Iran (1900-2008)	218
7.2.4	Production of fatality functions – checks using Level 2.....	225
7.2.5	Production of fatality functions – Global (1900-2008).....	229
7.2.6	Checks against the 2009-2012 data for validation.....	233
7.3	Economic Damage	237
7.3.1	Checking the capital stock and GDP losses versus the historical loss estimates.....	238
7.3.2	Economic functions – example of China.....	241
7.3.3	Production of economic functions globally from 1900-2008	244
7.3.4	Comparison with other studies versus the costs and intensity/exposure in this study.	248
7.4	Conclusion	256
8	CASE STUDIES.....	257
8.1	Introduction	257
8.2	1980 Irpinia Earthquake - Analysis of different source types	258

8.2.1	Introduction and Background	258
8.2.2	Comparing Intensity mapping methods	259
8.2.3	Fatality and economic estimates due to the various source types	260
8.2.4	Analysis of the Level 2 data for comparison	262
8.3	2011 Tohoku Earthquake	264
8.3.1	Defining the earthquake and exposure	264
8.3.2	Modelling fatalities and direct economic losses using the empirical model.....	265
8.3.3	Validating the estimates by disaggregating and studying the event	268
8.3.4	Conclusion.....	273
8.4	2011 Van Earthquake	275
8.4.1	Background	275
8.4.2	Rapid Analysis.....	277
8.4.3	Validating the rapid analysis	283
8.5	The normalisation of earthquake losses from 1900 to 2012	284
8.5.1	Creating normalised loss estimates for historical Australian earthquakes.....	284
8.5.2	Globally.....	294
9	CONCLUSION AND RECOMMENDATIONS.....	300
9.1	What has been answered?	300
9.2	What are the limitations?	304
9.3	How can this methodology be used and improved in the future?	306
10	REFERENCES.....	308
