Contents

1 Introduction 1

2 Optical Communication Systems 5

2.1 Digital Transmission Systems 5

2.2 Components of Optical Communication Systems 9

2.2.1 Laser 9

2.2.2 Modulator 10

2.2.3 Single-Mode Fiber 15

2.2.4 Numerical Modeling of Fiber 33

2.2.5 Optical Amplifier 38

2.2.6 Optical and Electrical Filter 41

2.2.7 Photo-Detector 42

2.3 Modulation Formats 42

2.3.1 OOK 44

2.3.2 Duobinary 49

2.3.3 DPSK 54

2.3.4 DQPSK 58

2.3.5 Equivalent Impulse Response 61

2.3.6 Wavelength Division Multiplexing 63

2.4 Transmission Impairments 64

2.4.1 Attenuation 64

2.4.2 Chromatic Dispersion 66

2.4.3 Polarization Mode Dispersion 71

2.4.4 Self-Phase Modulation 76
2.4.5 Cross-Phase Modulation ........................................ 78
2.4.6 Four-Wave Mixing ............................................. 81
2.4.7 Intrachannel FWM and Intrachannel XPM .................. 83
2.4.8 Stimulated Scattering Effects ................................ 85
2.5 Conclusions ....................................................... 86

3 Electronic Predistortion for Compensation of CD .............. 89
  3.1 Introduction ..................................................... 89
  3.2 Principle of Electronic Predistortion ......................... 90
  3.3 Filter Adaptation based on the Inverse Transfer Function .... 95
  3.4 Filter Adaptation utilizing Window-Functions ................ 98
  3.5 Filter Adaptation using the MMSE Criterion .................. 102
  3.6 Impact of Filter Adaptation on EPD Performance ............. 106
  3.7 Compensation of Other Linear Transmission Impairments .... 109
  3.8 Sensitivity to Limitations in D/A Converter Hardware ....... 109
  3.9 Tolerance towards Detuning of the EPD Filter ............... 119
  3.10 Nonlinear Performance for Single Channel Transmission .... 119
  3.11 Nonlinear Performance for WDM Transmission ................. 123
  3.12 Improved Nonlinear Transmission by using Phase Optimized OOK 129
  3.13 Complexity of EPD for Compensation of CD ................ 137
    3.13.1 Complexity Reduction using the Symmetry of the FIR Taps 145
    3.13.2 Complexity Reduction using Real Input Signal ........... 146
    3.13.3 Complexity Reduction using the Discrete Input to the FIR Filter 146
    3.13.4 Complexity Reduction using Timing Alignment of the Input Signal 148
  3.14 Conclusions ................................................... 149

4 EPD for Compensation of CD and Nonlinearity .................. 153
  4.1 Introduction .................................................. 153
  4.2 Filter Adaptation to the Transmission Link ................. 154
  4.3 Sensitivity to Limitations in D/A Converter Hardware ....... 158
5 Electronic Predistortion for Compensation of PMD

5.1 Transmitter Structure ........................................... 212
5.2 Identification of the Polarization Transfer Matrix .......... 214
  5.2.1 Perfect Knowledge of the Physical Perturbation .......... 214
  5.2.2 Measurement of the PMD-Vector and its Derivatives .... 214
  5.2.3 Measurement of the Polarization Transfer Matrix ....... 216
5.3 Adaptation Speed and Control Algorithm .................... 217
5.4 Performance .................................................... 219
  5.4.1 Measured PMD-Vectors .................................... 219
  5.4.2 Measurements of the Polarization Transfer Matrix ...... 221
  5.4.3 Impact of Limited Transmitter D/A Conversion Rate .... 222
  5.4.4 Impact of Measurement Quantization .................... 223
5.5 Conclusions ................................................... 224

6 Summary and Conclusion ........................................ 227

A Split-Step Fourier Method ...................................... 235
  A.1 Adaptation of Step Size by Nonlinear-Phase Rotation ...... 238
