# Contents

1 Introduction

2 Prerequisites
   2.1 System Types .......................................................... 13
   2.2 Terms and Techniques .................................................. 18

3 Characteristics

4 Modeling Language Requirements

5 Scenarios
   5.1 Self-Adaptive Systems ................................................ 34
   5.2 Networked Embedded and Cyber-Physical Systems ............... 37
   5.3 Networked Cyber-Physical and System of Systems .............. 39
   5.4 Discussion of Scenario Characteristics ........................... 41

6 Related Work
   6.1 Modeling Languages and Techniques ............................... 49
   6.2 Frameworks ............................................................. 54
   6.3 Former Own Work ..................................................... 56

7 Conclusion and Future Work
