Part I On Judicial and Evidential Reasoning in the Field of Industrial Accidents

1 On Judicial and Evidential Reasoning in the Field of Industrial Accidents	3
Introduction	3
The Idea of Demonstration and the Three Forms of Reasoning	6
What Do We Mean by Scientific Method?	12
The Scientific Method Applied to the Reconstruction of Accidents: The First Foundations of the Scientific Character of Proof	18
Conclusions	23
2 An Introduction to Judicial Reasoning in Large Scale Industrial Accidents and Disasters	25
The Explosion of the Space Shuttle Challenger	25
What Went Wrong at Kennedy Space Center	26
The Explosion in the Nuclear Power Station of Chernobyl	29
What Went Wrong in the Chernobyl Nuclear Plant	29
The Case of Iran Air Flight 655	31
What Went Wrong on Board Vincennes	32
The Causes of Failure: The Thread Connecting Large-Scale Accidents and Industrial Disasters	33
Introduction to General Principles of Causal Relationship in Criminal Law	36
Conclusions	38
3 Causation by Scientific Laws	41
Introduction	41
Causal Relationship and an Accidental Sequence of Events	45
The Concrete Case Under Universal Laws	46
The Concept of Cause in Necessary and Sufficient Conditions	50

Causation in the Scientific Field	53
Conclusions	61
4 First Level of Sequence of Event Analysis	63
Introduction	63
The Sequence of Event Method or First Level SEA	64
The Limits of First Level SEA	67
Conclusions	74
 Part II From Scientific Proofs to Reconstruction of Multilevel Liability Pattern in Organization	
5 The Analysis of Accidents Using a Multi-Level Approach: Organizational Accidents	79
Introduction	79
The Three Models of Organizational Accidents	81
The Organizational Accident Model as Applied to Collisions Between Aircraft Caused by an Incursion on a Runway	85
The Accident in Tenerife	85
The Accident in Los Angeles	87
The Accident in Linate Airport, Milan	89
The Three Levels of Failure in the Accident in Linate	90
Conclusions	92
6 Multi-Level SEA Analysis for Tracing Criminal Responsibility in Organizational Accidents	95
Introduction	95
A Practical Application: The Case of the Accident in Tenerife	97
Brief Notes About the Origin of Sequence of Events	99
The Classification of Errors According to J. T. Reason	101
Management of Risk Using Root Case Analysis	102
Conclusions	103
7 The Sequence of Events Assisted by Computer Graphics: Two Case Studies	105
Introduction	105
The Strange Case of Mr. J	107
The Technique of Animated 3D Graphics and the Sequence of Events to Verify the Hypotheses of Reconstruction in the Strange Case of Mr. J	110
The Reconstruction of the Virtual Scenario in 3D Graphics: Static Analysis	111
The Reconstruction of the Virtual Scenario in 3D Graphics: Dynamic Analysis	111
Verification of Hypothesis A Using the SEA Technique Assisted by 3D Computer Graphics	113

Verification of Hypothesis B Using the SEA Technique Assisted by 3D Computer Graphics	114
The Judge's Conclusions	115
The Integration of SEA with 3D Animated Computer Graphics: The Viareggio Railway Accident Reconstruction	116
The Hybrid Technique, 3D Scanner and Computer Graphics	123
The Last Frontier of Assisted SEA Analysis: Dynamic Hybrid Analysis in 3D Graphics and Its Verification Using Dynamic Multibody Analysis Software	125
Conclusions	127
