Introduction: Failure of the Economy – Wrong Theoretic Instructions or Wrong Implementations by Economic Policy Making? ........ 21
1. Expulsion from Paradise ................................................................................. 23
2. No Return Back to Paradise: Mankind must now Perform Economic Activities by Proper Means by themselves ...................... 24
3. Three Development Stages of the Economy ................................................. 26
   3.1 First Development Stage: The Natural Barter Economy ......................... 26
   3.2 Second Development Stage: The Monetary Economy ............................. 26
      3.2.1 Functional Requirements and Functional Impacts on a Monetary Economy by the Amount of Money Adjustment .............. 27
      3.2.2 Maintenance of Viability of a Monetary Economy by the Amount of Money Adjustment .............................................. 29
      3.2.3 A Sure Way Leading into a Crisis .................................................... 33
   3.3 Third Development Stage: The Sustainable Economy ......................... 35
5. Economic Activity in an Imperfect Competition ........................................... 37
6. Dissatisfaction with Real Existing Economic Systems .............................. 38
   6.1 Presentation of Impacts of Profit Maximization supplied by the Salmon Fable ................................................................................. 39
      6.1.1 Framework Conditions of the Example ........................................... 39
      6.1.2 The Initial Situation ...................................................................... 40
      6.1.3 The Intervention by an Employer .................................................... 40
      6.1.4 A Hazard to Sustainability .............................................................. 41
      6.1.5 Conclusion: Sustainability despite Inefficiency .............................. 42
   6.2 Misunderstanding: The Profit Maximization Principle ......................... 43
      6.2.1 The Profit Maximization Principle as an Economic Guiding Principle . 43
      6.2.2 The Significance of Profit Maximization by the Perfect Competition ... 44
      6.2.3 The Significance of Profit Maximization in an Imperfect Competition (Functional Competition) .............................................. 45
6.2.4 The Profit Maximization Principle and undesired Side Effects ........................................ 46
6.2.5 A Dosed Profit Maximization at the “break-even-point” ............................................... 47
6.2.6 Profit should never be the Employer’s Salary ................................................................. 48
6.2.7 Conclusion: Profit Maximization is only possible in Perfect Competition ........................ 49

6.3 The Malady of Subsidies ........................................................................................................ 49
6.3.1 A Subsidy Policy ............................................................................................................... 50
6.3.2 Alleged Necessity for Subsidizations ............................................................................... 50
6.3.3 Impacts of Subsidization .................................................................................................. 52
6.3.4 Preventing Subsidies ........................................................................................................ 52
6.3.5 Conclusion: Subsidies lead into a Governmental Economy .............................................. 53

6.4 National Debts - Continuously Rising, and No Way Paying Them Back .......................... 53
6.4.1 National Debt – a well-known Phenomenon .................................................................... 54
6.4.2 Arguments for and against National Debts ...................................................................... 55
6.4.3 Weaknesses in the National Debt Argumentation ............................................................ 56
6.4.4 A Model to assess the National Debt .............................................................................. 56
6.4.5 Limiting the National Debt .............................................................................................. 60
6.4.6 National Debt and Growth ............................................................................................... 66
6.4.7 Conclusion: National Debts destroy Equilibria .............................................................. 69

6.5 Systemic Economic Crises .................................................................................................... 70
6.6 Concentration of Assets in the Upper Economic Cycle ..................................................... 71
6.7 Attempts to solve Crises to the Disadvantage of the Lower Economic Cycle ................................. 72
6.7.1 Growth: Not an Economic “perpetuum mobile” ............................................................. 73
6.7.1.1 Growth as a Traditional Economic Strategy .............................................................. 74
6.7.1.2 What is Economic Growth? ....................................................................................... 75
6.7.1.3 How is the Term Economic Growth to be Explained? .............................................. 76
6.7.1.4 Is Economic Growth infinite, respectively exponential? ........................................... 78
6.7.1.5 Is Economic Growth necessary? ................................................................................ 79
6.7.1.6 The Partial Anti-Growth Thesis ................................................................................. 80
6.7.1.7 Interdependence between Population- and Economic Growth .................................. 81
6.7.1.8 How to stop the Population Explosion .................................................................... 82
6.7.1.9 A New Growth Model ............................................................................................... 82
6.7.1.10 Conclusion: The Law of the Decreasing Growth Rate is Valid ............................... 83
6.7.2 Saving as a Shrinking Process ......................................................................................... 83

Part 2: Requirements for a better Economic System ...................................................................... 87
1. Welfare instead of Wealth ....................................................................................................... 87
1.1 Welfare Maximization as a Guiding Principle .................................................................... 87
1.2 What is the Definition of Wealth? ....................................................................................... 88
1.3 What is the Definition of Welfare? .................................................................................... 88
1.4 Welfare with reasonable Wealth ....................................................................................... 89
1.5 Measuring Life Quality ...................................................................................................... 90
1.6 Conclusion: Objective is the Realization of the "social optimum" ........................................... 94
2. Economic Guarantee: neither Systemic Economic Crises nor Games of Roulette ........................................................................................................ 95
3. Fair Economic Activity: Complying with the Rules of the Game ............ 96
3.1 What is Really Meant by Fair? ................................................................. 96
3.2 Compliance of Important Rules and Generation of similar Conditions for Activities on the Market for the Proper Function of the Economic System .................................................................................. 97
3.3 Conclusion: Also Economic Activity require Fairness ................................. 97
4. The same Conditions: The Football Fable ............................................. 98
4.1 The same Conditions in the Sports Sector ........................................... 98
4.2 Function Conditions “same Conditions and Rules on the Complete Football Field” .................................................................................. 99
4.3 Conclusion: Economic Activities require the same Rules for all Market Participants .................................................................................. 101
5. Compliance of a Simple Derived Instruction from the Pareto-Optimum .. 101

Part 3: Alternatives to Real Existing Economic Systems ................................. 103
1. The Perfect Balance between the Market and the Central Government Planning .................................................................................. 103
2. “Third Way” ................................................................................................ 105
3. The “bottom up approach” ........................................................................ 106
4. Global Process of a Sustainable Development ....................................... 110
4.1 Three Pillars of Sustainability ................................................................. 111

Part 4: Sustainable Market Economy ............................................................. 115
1. Quantity- and Value-Based Market Equilibrium at a determined Point of Time .................................................................................. 115
1.1 Equilibria in Markets are only possible by Waiving of the Value Creation .................................................................................. 116
1.2 Company Equilibria as Basis of the Market Equilibrium ..................... 117
1.2.1 Economic Company Equilibrium ....................................................... 117
1.2.2 Technical Company Equilibrium ....................................................... 118
1.2.3 Technical-Economic Company Equilibrium .................................... 118
1.2.4 Hierarchy of Equilibria ....................................................................... 119
2. Models of Economic Sustainability ....................................................... 120
2.1 Model of Sustainability with One Company ........................................ 120
2.2 Model of Sustainability with Several Companies and the Same High Production Costs ................................................................. 123
2.3 Model of Sustainability with More Companies and Different High Production Costs ................................................................. 126
2.4 Models of Sustainability with More than Three Partial Cycles .......... 129
2.5 Model of Sustainability with Several Companies and Different High

Appendix ........................................................................................................ 165
