Table of Contents

Preface .................................................................................................................................14

Part 1 Functional Neuroanatomy

1: Higher-order Motor Areas in the Frontal Cortex: How do We use them? by Jun Tanji .................................................................19

2: Hand and Face Observation and the Role of Frontal Areas for Emotional Appraisal by Martin Lotze .................................................................47

3: Towards a Representational Understanding of Medial Temporal Lobe Processing by Patric Meyer and Herta Flor .................................................................59

4: On the Neuroanatomical Parcellation and Multiple Functions of the Inferior Parietal Lobule by Juliane Klann, Ferdinand Christoph Binkofski and Svenja Caspers .................................................................................................................................75

5: Role of the First and Second Person Perspective for Control of Behaviour: Understanding Other People’s Facial Expressions by Denise Potthoff and Rudiger J. Seitz .........................................................................................................................85

Part 2 Clinical Neuropsychology, Brain Dysfunction and Neurehabilitation

6: Neurophysiological Assessment and Brain-Communication in Non-Responsiveness and Paralysis by Boris Kotchoubey, Ujwal Chaudhary, Francesco Piccione and Niels Birbaumer .................................................................................................................105
7: Correlation Between Aging, Mild Cognitive Impairment and Alzheimer's Disease Studied with MRI, FDG-PET and PIB-PET by Juha O. Rinne ..........123

8: Voluntary Movement Deficits of Eyes and Limbs: Neuroanatomy and Diagnosis by Styrmir Saevarsson and Árni Kristjánsson.................................133

9: Functional Connectivity Changes in BPD by Arun D’Souza.........................153

10: Borderzones of Neurorehabilitation - A Personal Statement by Arto Laihinen ........................................................................................................171

Part 3 Neuropsychology- A Bridge to the Sciences, Arts and Education

11: Neuropsychology and Dentistry. Is there any Connection? by Tibor Károly Fábián, Anita Beck, Wolf-Rainer Krause, Pál Fejérdy, Péter Hermann, Gábor Fábián ........................................................................................................179

12: Neuropsychology of Asymmetrical Visual Aesthetic Preferences across European and Asian Cultures by Mohammadsaeid Marandi..............................195

Part 4 Animal Behaviour and Pet Ownership Relationships

14: Comparing Individuals within and across Situations, Groups and Species: Metatheoretical and Methodological Foundations Demonstrated in Primate Behaviour by Jana Uher ........................................................................223
15: Beneficial Effects of Pet Ownership on Human Health: The Influence of Caretakers' Attachment Style and Personality as well as Dog's Personality and Behavior by Corinna Buderer, Verena Schreiner and Rainer Wohlfarth

Part 5 Altered States of Consciousness

16: How does Hypnosis Heal? Change in an Ego-Free Status by Dirk Revenstorf

17: State after Removal of a Meningeoma. Mental Rehabilitation with the Support of Hypnosis: Case Study by Hans Riebensahm and Francesca Scarpinato-Hirt

18: Basics, Models, and Visions by Thilo Hinterberger

Part 6 History of Experimental Psychology and Clinical Neuroscience

19: Wilhelm Wundts Neuropsychologie by Jochen Fahrenberg

20: The Role of Psychologists for the Clinical Neurosciences by Hans-Joachim Freund
