

Thema

Quantum Chemical Study of
Excited State Proton Transfer
in Solvated Organic Molecules

GUTACHTER: PROF. DR. RER. NAT. ANDREAS DREUW

PROF. DR. RER. NAT. UWE H. F. BUNZ

Contents

Acknowledgements	vii
Contents	viii
List of Figures	xi
List of Tables	xv
1 Introduction	1
2 Theoretical Methodology	5
2.1 The Molecular Schrödinger Equation	6
2.2 The Born-Oppenheimer Approximation	6
2.2.1 Conical intersections and minimum energy crossing point optimizations	8
2.3 Wave function-based methods	10
2.3.1 Hartree-Fock Theory	11
2.3.2 Second quantization	12
2.3.3 Configuration Interaction Theory (CI)	14
2.3.4 Coupled Cluster Theory	14
2.3.5 Møller-Plesset Perturbation Theory	15
2.4 The Algebraic Diagrammatic Construction of the Polarization Propagator	17
2.4.1 ADC via ISR	18
2.4.2 Structure of the ADC matrix	19
2.5 Density-based Methods	20
2.5.1 Density Functional Theory	20
2.5.2 Time-Dependent Density Functional Theory	22
2.5.3 Performance and limitations of TD-DFT	24
2.6 Computation of absorption and fluorescence spectra	26
2.7 Analysis of electronically excited states	27
2.7.1 Transition density analysis	28
2.7.2 Difference density analysis	28
2.8 Computational treatment of solvation	29
2.8.1 The conductor-like screening model (COSMO)	31
2.8.2 The conductor-like polarizable continuum model (C-PCM)	32
3 Pigment Yellow 101: Potential energy surfaces and kinetic modeling for excited state dynamics	35

3.1	Motivation and Background	35
3.2	Computational Methods	38
3.3	Structure of PY101	39
3.4	Static excited state properties of PY101	43
3.5	Potential energy surfaces	45
3.6	Approximate kinetic model for excited state dynamics	52
3.7	Conclusion	55
4	Fluorescence Quenching of Aromatic Aldehydes	57
4.1	Motivation and Background	57
4.2	Literature overview	59
4.3	Computational Methods	61
4.4	Benzaldehyde in the gas phase	61
4.5	Static properties of solvated benzaldehyde	63
4.6	Mechanism of fluorescence quenching of aromatic aldehydes in water	65
4.7	Solvent, substituent, and imine effects on fluorescence quenching	75
4.8	Size of the π -delocalized system	79
4.8.1	$n = 0$	80
4.8.2	$n = 1$	81
4.8.3	$n = 2$	84
4.8.4	$n = 3$	85
4.8.5	Summary of size effects	87
4.9	Conclusion	89
5	Excited state properties of pyranine-derived super-photoacids	93
5.1	Motivation and Background	93
5.2	Computational Methods and Benchmarking	95
5.3	Previous experimental findings	98
5.4	Static properties of pyranine-based photoacids	101
5.5	Absorption and emission spectra in a series of solvents	112
5.6	Dissociation of HPTA and 1A	115
5.7	Conclusion and Outlook	122
6	Summary and Conclusions	127
	Bibliography	133
	Eidesstattliche Versicherung	151
