|-------|-------------------------------------------------------------------------------------|----|
| 1     | Introduction                                                                        | 1  |
| 1.1   | Motivation and scope.....                                                           | 1  |
| 1.2   | The geology and mineralogy of Juventae Chasma in context with Valles Marineris..... | 2  |
| 1.2.1 | Valles Marineris.....                                                               | 4  |
| 1.2.2 | Juventae Chasma and Maja Valles.....                                                | 8  |
| 1.3   | Comparative studies .....                                                           | 17 |
| 1.4   | Atmosphere and water .....                                                          | 18 |
| 1.5   | Sulfuric acid evolution of Mars.....                                                | 23 |
| 1.5.1 | Sulfuric acid evolution by volcanic exhalation .....                                | 23 |
| 1.5.2 | Sulfuric acid evolution by aqueous pyrite oxidation.....                            | 24 |
| 2     | Data methods .....                                                                  | 29 |
| 2.1   | Mars Global Surveyor .....                                                          | 29 |
| 2.2   | Mars Orbiter Altimeter .....                                                        | 30 |
| 2.3   | Mars Orbiter Camera .....                                                           | 30 |
| 2.4   | High-Resolution Stereo Camera.....                                                  | 30 |
| 2.5   | Mars Reconnaissance Orbiter .....                                                   | 32 |
| 2.6   | The Context Camera.....                                                             | 33 |
| 2.7   | Software Geographic Information System.....                                         | 33 |
| 3     | Geochemistry .....                                                                  | 35 |
| 3.1   | Sample selection and description.....                                               | 35 |
| 3.2   | Analytical methods .....                                                            | 39 |
| 3.2.1 | X-ray fluorescence spectrometry .....                                               | 39 |
| 3.2.2 | X-ray diffractometry.....                                                           | 40 |
| 3.3   | Geochemical investigations of major elements .....                                  | 40 |
| 3.4   | Mineral content.....                                                                | 42 |
| 4     | Experimental solution production and analytical methods .....                       | 45 |
| 4.1   | Leaching experiment results .....                                                   | 47 |

---

|        |                                                                                        |     |
|--------|----------------------------------------------------------------------------------------|-----|
| 4.1.1  | Dissolved species distribution in the pH 1.3 samples .....                             | 50  |
| 4.1.2  | Dissolved species distribution in the pH 3 samples .....                               | 52  |
| 4.2    | Comparison of solution samples and solid samples .....                                 | 55  |
| 5      | Numerical modeling of evaporation .....                                                | 61  |
| 5.1    | Modeling software .....                                                                | 62  |
| 5.2    | Limitations .....                                                                      | 65  |
| 5.3    | Modeling results .....                                                                 | 67  |
| 5.3.1  | Tissint .....                                                                          | 67  |
| 5.3.2  | Olivine .....                                                                          | 73  |
| 5.3.3  | Clinopyroxene .....                                                                    | 76  |
| 5.3.4  | Orthopyroxene .....                                                                    | 80  |
| 5.3.5  | Plagioclase .....                                                                      | 83  |
| 5.3.6  | 1-komatiite .....                                                                      | 86  |
| 5.3.7  | s-komatiite .....                                                                      | 89  |
| 5.3.8  | Volcanic glass .....                                                                   | 92  |
| 5.3.9  | DTS-2b .....                                                                           | 96  |
| 5.3.10 | Bir-1a .....                                                                           | 99  |
| 5.3.11 | Xenolith .....                                                                         | 103 |
| 6      | Interpretation and discussion .....                                                    | 107 |
| 6.1    | Fluid geochemistry .....                                                               | 107 |
| 6.2    | Volume calculations of Juventae Chasma, the mounds A to D,<br>and water contents ..... | 124 |
| 6.3    | Brittle fractures at mound B .....                                                     | 130 |
| 6.4    | Dependency of mineral formation on fluid temperature .....                             | 132 |
| 7      | Paleolakustrine evolution of Juventae Chasma .....                                     | 139 |
| 8      | Summary of results .....                                                               | 145 |
| 9      | References .....                                                                       | 147 |
| 10     | Appendix .....                                                                         | 167 |
