

Contents

1	Introduction	1
2	The Texture	3
2.1	Introduction to Textures	3
2.2	The Determination and Representation of Textures	4
2.2.1	The Crystallographic Orientation	4
2.2.2	The Orientation Distribution Function	4
2.2.3	The Representation of Textures	5
2.3	The Texture Induced Anisotropy of Mechanical Properties	7
3	Modeling the Formation of Rolling Textures	9
3.1	Introduction to Rolling Textures and their Simulation	9
3.2	The Taylor Models	9
3.3	The Grain Interaction Model	11
4	Modeling the Formation of Recrystallization Textures	15
4.1	Introduction to Recrystallization Textures and their Simulation	15
4.2	The Recrystallization Nucleation Model	17
4.3	The Statistical Recrystallization Model	18
4.4	Iterative Determination of Nuclei Textures	21
5	Impact of Microstructure on Texture Development	23
5.1	Introduction	23
5.2	Experimental Part	23
5.2.1	Experimental Procedure	23
5.2.2	Characterization of Initial State	24
5.2.3	Impact of Initial State on Rolling Texture	26
5.2.4	Impact of Initial State on Recrystallization Texture	26
5.3	Simulation of Texture Evolution Depending on Initial State	28
5.3.1	Impact of Initial State on Rolling Texture	28
5.3.2	Impact of Initial State on Recrystallization Texture	30
5.4	Discussion	34
5.4.1	Experimental Part	34
5.4.2	Simulation of Recrystallization Texture Depending on Initial State	35

6	Impact of Precipitation State on Texture Development	37
6.1	Introduction	37
6.2	Literature Review	37
6.3	Experimental Part	39
6.3.1	Experimental Procedure	39
6.3.2	Experimental Methods of Characterization	40
6.3.3	Characterization of Initial State	41
6.3.4	Impact of Precipitation State on Rolling Texture	44
6.3.5	Impact of Precipitation State on Recrystallization Texture	46
6.4	Simulation of Texture Evolution Depending on Precipitation State	54
6.4.1	Impact of Precipitation State on Rolling Texture	54
6.4.2	Impact of Precipitation State on Recrystallization Texture	57
6.5	Discussion	61
6.5.1	Experimental Part	61
6.5.2	Simulation of Rolling Texture Depending on Precipitation State	69
6.5.3	Simulation of Recrystallization Texture Depending on Precipitation State	72
7	Formation of Texture Gradients Through the Sheet Thickness	77
7.1	Introduction	77
7.2	Literature Review	78
7.3	Experimental Part	79
7.3.1	Experimental Procedure	79
7.3.2	Characterization of Initial Material	79
7.3.3	Formation of Texture Gradients upon Cold Rolling	81
7.3.4	Formation of Texture Gradients upon Recrystallization	83
7.4	Modeling the Formation of Texture Gradients	84
7.4.1	A Simple Model for the Strain Gradient	84
7.4.2	Impact of Material and Processing Parameters on the Formation of Texture Gradients	86
7.4.3	Formation of Texture Gradients upon Cold Rolling	94
7.4.4	Formation of Texture Gradients upon Recrystallization	95
7.5	Discussion	101
7.5.1	Texture Gradients in Cold Rolled and Recrystallized Material of AA6016	101
7.5.2	Modeling the Formation of Through-Thickness Texture Gradients during Cold Rolling and Recrystallization	102
8	Further Development of the ReNuc Model	105
8.1	Introduction	105
8.2	The Advanced ReNuc Model	106
8.3	Model for Grain Boundary Nucleation	107
8.3.1	Impact of Process and Material Parameters on the Slip Pattern in a Grain Orientation	110

8.3.2	Impact of Process and Material Parameters on the In-Grain Misorientation in a Grain Orientation	111
8.3.3	Impact of Nucleation Model on GB Nucleus Texture	111
8.4	Model for Particle Stimulated Nucleation	115
8.4.1	Impact of Deformation Mode on In-Grain Misorientation and Dislocation Structure in a Grain Orientation	116
8.4.2	Impact of Local Strain Path on PSN Nucleus Texture	118
8.5	Discussion	118
8.5.1	Model for Grain Boundary Nucleation	118
8.5.2	Model for Particle Stimulated Nucleation	121
9	Discussion	125
9.1	Development of Rolling Texture	125
9.2	Development of Recrystallization Texture	126
10	Summary	129
