## Contents

### Part 1: Anatomy, Physiology, and Pathology of the Breast

1. Development, Anatomy, and Physiology of the Mammary Gland .............................................................. 2  
   A. Baum  
   1.1 Development .......................................................... 2  
   1.2 Anatomy ................................................................. 2  
   1.3 Physiology ...............................................................  2  
   Bibliography .................................................................. 3  

2. Tumor Formation ....................................................................... 4  
   A. Baum  
   2.1 Mutation, Carcinogenesis, and Angiogenesis ...... 4  
   2.2 Risk Factors ............................................................. 4  
   2.3 Genetic Risk Factors ................................................ 5  
   2.4 Prevention ............................................................... 6  
     2.4.1 Primary Prevention ................................................ 6  
     2.4.2 Secondary Prevention ............................................ 6  
     2.4.3 Tertiary Prevention ................................................ 6  
   2.5 Epidemiology, Incidence, and Mortality .................. 6  
   Bibliography .................................................................. 7  

3. Pathology of Benign and Malignant Changes in the Breast .......................................................................... 9  
   J. Rueschoff  
   3.1 Benign Changes ...................................................... 9  
     3.1.1 Histological Principles ............................................ 9  
     3.1.2 Nonneoplastic, Nonproliferative Diseases of the Breast ...................................................................... 9  
     3.1.3 Benign Tumor-Forming Diseases ........................... 11  
   3.2 Malignant Changes in the Breast ............................ 19  
     3.2.1 Classification of Malignant Breast Tumors (WHO Classification, B-Categories).................................... 19  
     3.2.2 Prognostic and Predictive Factors ......................... 20  
     3.2.3 Papillary Lesions ..................................................... 24  
     3.2.4 Ductal Carcinoma In Situ ...................................... 25  
     3.2.5 Microinvasive and Invasive Breast Carcinoma ....... 26  
     3.2.6 Tumors of the Nipple .............................................. 29  
     3.2.7 Malignant Mesenchymal Tumors and Lymphomas of the Breast ......................................................... 29  
     3.2.8 Metastatic Tumors ................................................. 30  
   3.3 Acknowledgments ................................................... 31  
   Bibliography .................................................................. 31  

### Part 2: Breast Diagnostics

4. Nonimaging Diagnostics ............................................................. 34  
   U. Fischer  
   4.1 History .................................................................... 34  
   4.2 Informed Consent .................................................... 34  
   4.3 Self-Examination ..................................................... 34  
   4.4 Inspection ............................................................... 34  
   4.5 Palpation ................................................................. 35  
   4.6 Bibliography ........................................................... 40  

5. Mammography ............................................................................ 41  
   U. Fischer  
   5.1 Technique and Methods ............................................ 41  
   5.1.1 Principles of X-ray Mammography ...................... 41  
   5.1.2 Components of a Mammography System ............ 41  
   5.1.3 Exposure Parameters ........................................... 43  
   5.1.4 Image Quality ....................................................... 43  
   5.1.5 Analog Mammography ........................................ 44  
   5.1.6 Digital Mammography ......................................... 45  
   5.1.7 Radiation Exposure ............................................. 54
| 8.3.2 | Ductal Carcinoma In Situ (Intermediate Type) | 141 |
| 8.3.3 | Ductal Carcinoma In Situ (High Grade) | 141 |
| 8.4 | Invasive Tumors | 143 |
| 8.4.1 | Invasive Ductal Carcinoma | 143 |
| 8.4.2 | Invasive Lobular Carcinoma | 145 |
| 8.4.3 | Tubular Carcinoma | 147 |
| 8.4.4 | Medullary Carcinoma | 147 |
| 8.4.5 | Mucinous Carcinoma | 148 |
| 8.4.6 | Invasive Papillary Carcinoma | 150 |
| 8.4.7 | Sarcomas | 152 |
| 8.4.8 | Triple-Negative Carcinoma | 152 |
| 8.4.9 | Paget's Disease of the Nipple | 152 |
| 8.4.10 | Inflammatory Carcinoma | 154 |
| 8.4.11 | Systemic Diseases Involving the Breast | 155 |

### 9 Breast Intervention

T. Baum

| 9.1 | Biopsy | 158 |
| 9.1.1 | Objective of Percutaneous Tissue Sampling | 158 |
| 9.1.2 | Percutaneous Tissue Sampling Equipment and Implementation | 158 |
| 9.1.3 | Interventional Imaging | 161 |
| 9.1.4 | Classification of Findings | 164 |
| 9.1.5 | Tumor Seeding and Mechanical Tumor Induction | 166 |
| 9.1.6 | Quality Assurance | 166 |

### 10 Examination Concepts

U. Fischer

| 10.1 | Prevention | 176 |
| 10.2 | Early Breast Cancer Detection (Secondary Prevention) | 176 |
| 10.2.1 | Mammography Screening | 177 |
| 10.2.2 | Individualized Examination Concepts | 180 |
| 10.2.3 | Early Detection in Women with a High-Risk Profile | 181 |
| 10.2.4 | Future Concepts of Early Breast Cancer Detection | 182 |
| 10.3 | Diagnostic Work-up | 183 |

### 11 Surgical Treatment of Breast Carcinoma

T. Kuehn

| 11.1 | Significance of Surgery in the Context of Multimodal Treatment of Breast Carcinoma | 187 |
| 11.2 | Types of Breast Carcinoma | 187 |
| 11.2.1 | Lesions of Uncertain Biological Potential (B3 Lesions) | 187 |
| 11.2.2 | Preinvasive Carcinoma (Ductal Carcinoma in Situ; B5a) | 187 |
| 11.2.3 | Invasive Carcinoma (B5b) | 187 |
| 11.3 | Surgical Treatment of the Primary Lesion | 189 |
| 11.3.1 | Oncologic Aspects | 189 |
| 11.3.2 | Technical Aspects | 189 |
| 11.4 | Lymph Node Surgery | 192 |

### Bibliography

173

Part 3: Prevention and Therapy of Breast Cancer

10.4 | Pretherapeutic Local Staging | 183
10.5 | Pretherapeutic Peripheral Staging | 184
10.6 | Follow-up Care | 184
10.7 | Implant Evaluation | 185
10.8 | Evaluation of the Male Breast | 185

### Bibliography

185
12 Medical Treatment of Breast Cancer

12.1 Basic Principles and Objectives

12.2 Adjuvant Drug Therapy

12.2.1 Adjuvant Chemotherapy

12.2.2 Neoadjuvant Therapy

12.2.3 Adjuvant Endocrine Therapy

12.2.4 Antibody Therapy

12.3 Medical Treatment in Locoregional Recurrence

12.4 Medical Treatment of Distant Metastases

13 Radiotherapy of Breast Cancer

13.1 Adjuvant Radiotherapy after Breast-Conserving Surgery

13.2 Adjuvant Radiotherapy after Mastectomy

13.3 Effectiveness of Adjuvant Radiation Therapy: Prognostic Factors

13.4 Integration of Adjuvant Radiotherapy into the Multimodal Treatment Concept

13.5 Target Volume and Dose Concept

13.5.1 Clinical Target Volume: Former Tumor Region, Mammary Gland, Chest Wall, and Regional Lymph Channels

13.5.2 Partial Breast Irradiation

13.6 Acute Side Effects and Complications of Adjuvant Radiation Therapy

13.6.1 Acute Side Effects

13.6.2 Late Complications of Radiation Therapy

13.7 Planning and Implementing Radiation Therapy

13.8 Radiotherapy in Primarily Inoperable Tumors, Recurrences, and Metastatic Disease

13.9 Summary

14 Management of a Diagnostic Breast Center

14.1 Expertise

14.2 Equipment

14.3 Facility Design

14.3.1 Doctor's Consultation Room

14.3.2 Mammography and Sonography Rooms

14.3.3 Breast MRI Room

14.3.4 Rooms for a Second Ultrasound Unit and for Intervventional Procedures

14.3.5 Recovery Room

14.4 Ambiance

14.5 Communication

15 Logistics in an Interdisciplinary Breast Center

15.1 Background

15.2 Structure of a Certified Breast Center

15.3 Treatment Pathways in a Breast Center

16 Counseling Techniques and Psychosocial Support

16.1 Compliance

Bibliography
16.1.2 General and Personal Requirements .............. 228
16.1.3 Structural, Organizational, and Procedural Components ............................................................ 228
16.1.4 Interactive and Communicative Competence ...... 228
16.2 Communication ...................................................... 228
  16.2.1 General Principles of Communication ................... 229
  16.2.2 Communication: Dealing with the Patient ............ 229
  16.2.3 Communicating Results to the Patient ................... 230
16.3 The Patient’s Flow through the Department ........ 230
  16.3.1 Station 1: Registration ................................. 230
  16.3.2 Station 2: History and Physical Examination ....... 231
  16.3.3 Station 3: The Diagnostic Procedure .................. 232
  16.3.4 Station 4: Communication of Results and Concluding Consultation ......................................... 235
16.4 Summary ................................................................. 235

Bibliography ............................................................ 235

Index  .................................................................................. 237
