

Table of Contents

Abstract	iii
Table of Contents	vii
Nomenclature	xiii
Chapter 1 Introduction	1
Chapter 2 Transition phenomena	5
2.1 Transition mechanisms	6
2.1.1 Attachment line transition	6
2.1.2 Crossflow transition	6
2.1.3 Streamwise transition	8
2.1.4 Other transition mechanisms	11
2.2 Transition prediction	12
2.2.1 DNS or LES	12
2.2.2 Local linear stability theory	13
2.2.3 Empirical transition criteria	15
2.2.4 Transition transport models	19
Chapter 3 γ-$Re_{\theta t}$ transition model	21
3.1 Introduction	21
3.2 Streamwise transition modeling	23
3.2.1 Vorticity Reynolds number and Re_{θ} formulation	23
3.2.2 λ_2 and Tu	24
3.3 Crossflow transition modeling	24
3.3.1 Recalling the semi-local CI approach	25
3.3.2 Local CI -based approach	30
3.3.3 Local helicity-based approach	39
Chapter 4 Coupling of γ-$Re_{\theta t}$ and a Reynolds stress model and model calibration	45
4.1 The γ - $Re_{\theta t}$ RSM transition model	46
4.1.1 SSG/LRR- ω model	46
4.1.2 Coupling of the models	48

4.1.3	<i>Sustaining turbulence</i>	50
4.1.4	<i>Length-scale equation modification</i>	51
4.2	Streamwise transition calibration	54
4.2.1	<i>New onset function</i>	57
4.2.2	<i>New correlation function</i>	58
4.3	CF transition calibration.....	59
4.3.1	<i>Local C1-based approach</i>	60
4.3.2	<i>Local helicity-based approach</i>	61
Chapter 5	Grid influences and best practice	63
5.1	Grid convergence.....	64
5.1.1	<i>Streamwise transition</i>	64
5.1.2	<i>Crossflow transition</i>	66
5.2	Numerical scheme settings.....	67
5.3	Sustaining turbulence.....	69
5.4	Other settings.....	69
Chapter 6	Validation cases	71
6.1	Zero pressure-gradient flat plate.....	71
6.1.1	<i>T3-series ZPG flat plate</i>	72
6.1.2	<i>Schubauer & Klebanoff flat plate</i>	74
6.2	2D airfoils and infinite swept wing.....	76
6.2.1	<i>NLF (1)-0416 airfoil</i>	76
6.2.2	<i>NACA0021 airfoil</i>	79
6.2.3	<i>CAST10-2 airfoil</i>	81
6.2.4	<i>A310 3-element airfoil</i>	83
6.2.5	<i>NLF (2)-0415 swept wing</i>	84
6.3	3D cases	87
6.3.1	<i>DLR-F5 wing</i>	87
6.3.2	<i>DLR 6:1 prolate Spheroid</i>	93
6.3.3	<i>Sickle wing</i>	95
6.3.4	<i>DLR-F4 wing body</i>	98
Chapter 7	Summary and Outlook	105
7.1	Summary	105
7.2	Open questions	106
7.2.1	<i>Streamwise transition</i>	106

7.2.2	CF transition	107
7.3	Outlook.....	108
Bibliography	109
Publication	115
Appendix A	C2-criterion	A-1
Appendix B	SST & 4-equation model.....	B-3
B.1	Menter SST model.....	B-3
B.2	Langtry & Menter γ - Re_{th} SST model.....	B-4
B.3	4-equation model with CF-extension.....	B-7
B.3.1	Local C1-based approach.....	B-8
B.3.2	Local helicity-based approach.....	B-8
Appendix C	Calibration of model correlations for CF-extensions.....	C-9
C.1	Local C1-based model	C-9
C.2	Local helicity-based model	C-11
Appendix D	Calibration details	D-15
D.1	Improvement of the transition length behavior	D-15
D.2	Effect of $F_{length,cf}$	D-16
D.3	Influence from the turbulence settings at farfield.....	D-16
Appendix E	SSG/LRR-g model + 9-equation model	E-19
E.1	SSG/LRR-g model.....	E-19
E.2	γ - Re_{th} RSM model (SSG/LRR-g model).....	E-20
