Preface	17
<i>Zhenci XU</i>	
1 Future water use in the Guanting basin under climate change and socio-economic transition	19
<i>Frank Wechsung, Jürgen Hofmann, Tobias Conradt, Ilona M. Otto, Christoph Menz, Markus Venohr, Ute Mischke, Jens Meisel, Jacob Möhring, Christiane Walter & Stefan Kaden</i>	
1.1 Introduction	20
1.2 Study area (Chapter 2)	21
1.3 Overview of the principal modeling approaches and their results	22
1.3.1 Driving scenarios – socio-economy (Chapter 6)	22
1.3.2 Climate Change (Chapter 3)	22
1.3.3 Quasi-natural water discharge (Chapter 4)	24
1.3.4 Water management and economic significance (Chapters 7 and 11)	24
1.3.5 Impacts of nitrogen and phosphorus emissions on surface waters (Chapter 9)	26
1.4 Complementary surveys	28
1.4.1 Reservoirs (Chapters 7 and 10)	28
1.4.2 Water quality in rivers (Chapter 8)	29
1.5 Adaptation potentials and evaluation of measures (Chapter 11)	30
1.6 Discussion and concluding remarks	30
1.7 References	32
2 The geographical setting for integrated water resource management in the Guanting basin	35
<i>Frank Wechsung, Tobias Conradt, Ilona M. Otto, Jacob Möhring, Christoph Menz, Christiane Walter & Jürgen Hofmann</i>	
2.1 Introduction	35
2.2 The history of the Guanting reservoir and its basin	36
2.3 Administrative and socio-economic overview	39
2.4 Natural conditions	39

Content

2.4.1	Topography	39
2.4.2	Geology	41
2.4.3	Climate	42
2.4.4	Soils	48
2.4.5	Vegetation	49
2.5	Surface water resources and availability	49
2.6	Water quality	51
2.7	Current water allocation	51
2.7.1	Agricultural production	53
2.7.2	Industrial production	55
2.8	Governance of water resources	57
2.8.1	Administrative water allocation	59
2.8.2	Pricing water allocation	59
2.8.3	Water allocation conflicts	60
2.9	Integrated modeling for increased water availability and quality	61
2.10	References	61
3	Regional climate modeling	67
	<i>Christoph Menz</i>	
3.1	Introduction	67
3.2	Data and models	68
3.2.1	Observation datasets	69
3.2.2	The climate models	70
3.3	Results	73
3.3.1	Model evaluation	74
3.3.2	Future projection	75
3.4	Discussion	81
3.5	Conclusion	81
3.6	References	82
4	Simulation of natural water availability with the eco-hydrological model SWIM	85
	<i>Tobias Conradt</i>	
4.1	Introduction	85
4.2	Material and methods	87
4.2.1	Spatial data	87
4.2.2	Time series data	91
4.2.3	The SWIM model	91
4.3	Results	92

4.3.1	Calibration and validation	92
4.3.2	STARS scenarios.....	96
4.3.3	CCLM scenarios	98
4.3.4	Effects of crop and land use changes in agricultural areas.....	100
4.3.5	Output data propagation to other models.....	102
4.4	Discussion	102
4.5	Conclusions.....	103
4.6	References	103
5	Quality assessment of SWIM-Guanting simulations	107
	<i>Peter Carl</i>	
5.1	Introduction.....	107
5.2	Direct vs. inverse runoff modeling	108
5.3	Observed Guanting runoff: calibration period.....	109
5.4	SWIM-Guanting: High intermittency	111
5.5	Streamflow under the microscope	114
5.6	Discussion	116
5.7	Conclusions.....	116
5.8	References	117
6	Regionalization of socio-economic scenarios and adaptation options for the Guanting basin	119
	<i>Jacob Möhring, Ilona M. Otto & Xiaoxi WANG</i>	
6.1	Introduction.....	119
6.2	Material and methods	120
6.3	The Guanting scenarios results	121
6.4	Discussion	123
	6.4.1 Scenario regionalization – The Guanting story line	123
	6.4.2 The approach to the technological progress.....	125
	6.4.3 Selection of adaptation options	126
6.5	References	128
7	Water Quantity Management – the Model WBalMo	131
	<i>Stefan Kaden, Ines Stäglich & Michael Kaltofen</i>	
7.1	Introduction.....	131
7.2	Material and methods	133
	7.2.1 Data acquisition.....	133
	7.2.2 Model setup and input data in WBalMo	146

7.2.3	Plausibility check	159
7.3	Results	164
7.3.1	Results for climate scenarios with status quo in water management	164
7.3.2	Present and future situations for the 2°C-scenario	168
7.3.3	County water supply of agricultural operator	169
7.3.4	Results for climate scenarios, modified water management	174
7.3.5	Results for socio-economic scenarios	183
7.4	Discussion	194
7.5	Conclusions	194
7.5.1	Assessment of the surface water situation	194
7.5.2	Assessment of the groundwater situation	195
7.6	References	196
7.7	Abbreviations	196
8	Monitoring of trophic status and phytoplankton in water bodies of the Guanting basin	197
	<i>Ute Mischke, Jürgen Hofmann, Xiangling MA & Jens Meisel</i>	
8.1	Introduction	198
8.2	Material and Methods	198
8.2.1	Availability of current hydrological and chemical data	198
8.2.2	Sampling campaigns self-organized	199
8.2.3	Phytoplankton determination and counts	204
8.2.4	Index calculation	205
8.3	Results of nutrient monitoring in the Guanting basin	205
8.4	Phytoplankton in water bodies of the Guanting basin	209
8.5	Discussion	214
8.6	Conclusions	217
8.7	Acknowledgement	218
8.8	References	218
8.9	Appendix: photo documentation of diatom species in the Guanting basin	221
9	Water quality management: modeling of nutrient emissions with MONERIS	229
	<i>Markus Venohr, Stephanie Natho & Jürgen Hofmann</i>	
9.1	Introduction	229
9.2	Material and methods	232
9.2.1	Data base	232

9.2.2	Methodology of nutrient emission modeling	242
9.2.3	Implementation of climate and socio-economic scenarios as well as WBalMo management options	245
9.3	Results	246
9.3.1	Coupling MONERIS with SWIM and WBalMo	246
9.3.2	Adaptation of MONERIS to managed river systems under semi-arid conditions	247
9.3.3	Total nutrient emissions (1980–2007).....	250
9.3.4	River nutrient concentrations and loads	254
9.3.5	Comparison between calculated and observed nutrient loads	256
9.3.6	Nutrient losses to deep groundwater.....	258
9.4	Results for the reference year 2010 in comparison with the scenario periods P 2020, P 2030 and P 2035	259
9.4.1	Effects of the STARS 2K climate scenario with and without socio- economic changes (A1 and A2) on nutrient emissions and loads.....	259
9.4.2	Potential effect of management options to reduce nutrient emissions and surface water concentrations.....	264
9.4.3	Nutrient emission comparison: Guanting basin vs. European member states (EU 27)	269
9.5	Discussion	270
9.6	Conclusions	271
9.7	References	273
0	Reservoirs of the Guanting basin.....	277
	<i>Jens Meisel, Zenghui PAN, Thomas Gonsiorczyk, Elena Stein & Heiner Kümmel</i>	
10.1	Introduction.....	278
10.2	Material and methods	279
10.2.1	Geographical data	279
10.2.2	Geographic methods	279
10.2.3	Limnological data	280
10.2.4	Limnological methods – analysis of the open water.....	281
10.2.5	Limnological methods – analysis of sediments	281
10.3	Results	283
10.3.1	Geographical and limnological classification of the reservoirs	283
10.3.2	Limnological analysis of the reservoirs.....	288
10.3.3	Summary of the limnological conditions of the reservoirs.....	309
10.4	Discussion	311
10.4.1	Scenarios for the water yield in the future.....	311
10.4.2	Scenarios for water quality in the future	314

10.4.3	Water Management options for the future.	315
10.5	Conclusions	317
10.6	Acknowledgement	318
10.7	References	318
11	Impacts and adaptation	321
	<i>Jacob Möhring, Ilona M. Otto & Xiaoxi WANG</i>	
11.1	Integrated assessment	321
11.2	Water demand projections	322
11.3	Data and methods of impact assessment	323
11.3.1	Agriculture	324
11.3.2	Industry	325
11.3.3	Municipalities	326
11.3.4	Beijing	327
11.3.5	Groundwater balance	328
11.3.6	Vulnerability indicator	328
11.4	Results of the Impact Assessment	329
11.4.1	Data and methods of adaptation option assessment	332
11.4.2	Benefits of adaptation	332
11.4.3	Costs of adaptation	332
11.4.4	Cost-benefit analysis	334
11.5	Results of the adaptation option assessment	336
11.5.1	Benefits of adaptation	336
11.5.2	Costs of adaptation	338
11.5.3	Costs-benefit analysis	340
11.6	Conclusions and implications of the research	343
11.7	References	344
12	Exploring alternative water distribution rules with behavioral irrigation experiments	347
	<i>Ilona M. Otto & Frank Wechsung</i>	
12.1	Introduction	347
12.2	The design of the irrigation experiment	348
12.3	Selection of the participants and execution of the experiments	350
12.4	Experiment results	350
12.5	Information from the post-experiment questionnaires	354
12.6	Conclusions	356
12.7	References	357

13 InfoSYS Guanting 359

Antje Becker & Harry Düwel

13.1 Introduction 359

13.2 Material and methods 360

 13.2.1 System configuration and architecture 360

 13.2.2 Spatial and non-spatial data 361

 13.2.3 Implementation of web application 363

13.3 Results 363

 13.3.1 Database 363

 13.3.2 Interface and functions 363

 13.3.3 Case studies: Working with InfoSYS Guanting 365

13.4 References 373
