1	Introduction	1
2	Logistical Foundations	2
2.1	Supply Chain Management	2
2.2	Military Logistics	3
2.3	Levels of Logistics	4
2.3.1	Strategic Logistics	4
2.3.2	Operational Logistics	4
2.3.3	Tactical Logistics	5
2.4	Summary	6
3	Mathematical Foundations	7
3.1	Operations Research	7
3.1.1	Linear Programming	8
3.1.2	Simplex Algorithm	9
3.1.3	Integer Programming	10
3.1.4	Branch and Bound	10
3.2	Stochastics	11
3.2.1	Decision Tree	12
3.2.2	Random Experiment	13
3.2.3	Random Variable	13
3.3	Stochastic Programming	13
3.4	Simulation	15
3.4.1	Monte Carlo Simulation	16
3.4.2	Generation of Random Numbers	16

4	Mathematical Models	18
4.1	Model 1: "Fixed Parts to Systems Assignment"	18
4.1.1	Sets and indices	18
4.1.2	Parameters	19
4.1.3	Variables	21
4.1.4	Constraints	21
4.1.5	Objective	22
4.1.6	Simulation	23
4.1.7	Procedure	25
4.1.8	User Interface	25
4.2	Model 2: "Flexible Parts to Systems Assignment"	26
4.2.1	Variables	27
4.2.2	Constraints	27
4.2.3	Objective	28
5	Data	29
5.1	Real Data	29
5.1.1	Sets	29
5.1.2	Parameter	30
5.2	Sim Data	32
5.2.1	Sets	32
5.2.2	Parameter	33
6	Results	35
6.1	Level of Service	35
6.2	Number of Scenarios	37
6.3	Solving Time	40
6.4	Home/Worst Case Analysis	41
6.5	Fixed Warehouse	49
6.6	Comparison of Storage	53
6.6.1	Real Data	53
6.6.2	Sim Data	57
7	Conclusion and Outlook	62
