Preface — V

1	The development of nature of light — 1
1.1	Earlier theories — 1
1.1.1	Classical concepts of particle and wave — 1
1.1.2	Particle theory of light — 2
1.1.3	Wave theory of light — 2
1.2	Electromagnetic theory of light — 3
1.2.1	Electromagnetic induction law — 3
1.2.2	Maxwell's electromagnetic theory — 4
1.2.3	Electromagnetic theory of light — 6
1.3	Superposition and interference of light — 7
1.3.1	The law of independent propagation of light waves — 7
1.3.2	Light wave superposition principle — 8
1.3.3	Interference conditions of light waves — 8
1.4	Further discussion of coherence — 10
1.4.1	Complex variable expression of polychromatic field — 10
1.4.2	Degree of spatial and temporal coherence — 12
1.4.3	Measurement of correlation of spatial and temporal — 14
1.5	Early quantum theory of light and wave-particle duality — 17
1.5.1	Concepts of radiation and energy quanta — 17
1.5.2	Photoelectric effect and the concept of optical quanta — 20
1.5.3	Compton scattering and further approval of particle property of light — 23
1.5.4	Particle-wave duality of light — 25
1.6	Brief introduction to modern quantum theory of light — 27
1.6.1	Vector space and linear operator — 27
1.6.2	One-dimensional harmonic oscillator — 31
1.6.3	Quantization of electromagnetic field — 36
1.6.4	Coherent photon states — 40
1.6.5	Density operator and quantum distribution — 45
1.6.6	Introduction to photon optics — 50
2	Optical radiation and radiation source — 55
2.1	Mechanism of atomic emission — 55
2.1.1	Scattering of alpha particles and the nuclear structure of an atom — 55
2.1.2	Atomic spectrum of hydrogen and Bohr's model — 56
2.1.3	Quantum mechanics and atomic emission — 59

2.1.4	Spectral line broadening —	69
2.2	Spontaneous radiation and its sources —	73
2.3	Laser mechanism —	74
2.3.1	Concept of laser resonator and modes —	74
2.3.2	Necessary conditions for producing a laser —	75
2.3.3	Relationship between radiation coefficients —	78
2.3.4	Necessary conditions for laser production —	79
2.3.5	Sufficient condition for producing a laser —	80
2.4	Physical properties of the lasers —	83
2.4.1	Monochromatic and temporal coherence —	83
2.4.2	Directivity and spatial coherence —	84
2.4.3	Higher-order coherence —	85
2.4.4	High brightness —	85
2.5	Introduction to the operating characteristics of laser —	86
2.5.1	Ultrashort pulse characteristics —	86
2.5.2	Frequency stability characteristics —	87
2.6	Band structure and electronic states of semiconductors —	87
2.6.1	Introduction to the band concept —	87
2.6.2	Electronic state in semiconductor —	88
2.7	Excitation and recombination radiation —	90
2.7.1	Direct transition and the semiconductor light-emitting material —	90
2.7.2	Density of states and electronic excitation —	91
2.7.3	p-n Junction in extrinsic semiconductor materials —	94
2.8	Working mechanism of LEDs —	95
2.9	Semiconductor diode laser —	96
2.9.1	Semiconductor optical gain —	96
2.9.2	Loss and oscillation threshold condition —	98
2.10	Heterojunction semiconductor lasers —	100
2.10.1	Hetero-junction semiconductor —	100
2.10.2	Laser structure —	101
3	Bulk solid-state lasers —	103
3.1	Overview —	103
3.2	LD-pumped solid-state lasers —	104
3.2.1	Comparison with the flash lamp pump —	104
3.2.2	Threshold power and above threshold operation —	105
3.2.3	Structure of LD-pumped solid-state laser —	110
3.3	Thin-disc laser —	112
3.3.1	Thin media and pumping —	113
3.3.2	Principle of thin-disc laser —	113

- 3.3.3 “Liquid” lasers — 115
- 3.4 Slab lasers — 115
- 3.4.1 Introduction — 115
- 3.5 Solid heat capacity — 118
- 3.5.1 The classic theory of solid heat capacity — 118
- 3.5.2 Quantum theory of solid heat capacity — 119
- 3.6 Heat-capacity operation model of lasers — 124
- 3.6.1 Heat storage and increase in temperature — 124
- 3.6.2 Temperature distribution and thermal stress — 128
- 3.6.3 Beam distortion — 130
- 3.6.4 Heat capacity laser example — 131
- 4 Optical fiber lasers — 133**
 - 4.1 Introduction — 133
 - 4.2 Energy levels and spectra of several rare earth ions — 134
 - 4.2.1 Introduction — 134
 - 4.2.2 Laser energy levels and spectra of several rare earth ions in silicon optical fiber — 136
 - 4.2.3 Laser energy levels and spectra of several rare earth ions in fluoride optical fiber — 139
 - 4.3 Mode and conditions for single-mode operation — 143
 - 4.3.1 Bulk media — 143
 - 4.3.2 Optical fiber working material — 144
 - 4.3.3 Mode property and cutoff frequency — 145
 - 4.3.4 The basic structure of optical fiber lasers — 152
 - 4.4 Double-clad fiber laser — 153
 - 4.4.1 Limitation of the single-clad fiber — 153
 - 4.4.2 Double-clad fiber laser — 154
 - 4.4.3 Introduction of the photonic crystal fiber laser — 159
 - 4.5 Stimulated scattering fiber lasers — 161
 - 4.5.1 Raman scattering fiber lasers — 161
 - 4.5.2 Stimulated Brillouin scattering fiber lasers — 163
- 5 Beam propagation and propagation media — 167**
 - 5.1 Beam propagation in homogeneous media and media boundary — 167
 - 5.1.1 Beam propagation in homogeneous media — 167
 - 5.1.2 Beam transmission in the media boundary — 168
 - 5.1.3 Beam propagation through a thin lens — 169
 - 5.2 Gaussian beam propagation — 172
 - 5.2.1 Gaussian beam and its parameters — 172

5.2.2	Gaussian beam propagation in free space —	173
5.2.3	Gaussian beam propagation through a thin lens —	174
5.3	Ray optics theory of planar dielectric optical waveguides —	175
5.3.1	Beam reflection and refraction in media boundary —	176
5.3.2	The beam propagation in planar waveguide —	178
5.3.3	Guided wave in planar dielectric waveguide —	180
5.3.4	Goos-Hänchen displacement and effective depth of waveguides —	181
5.4	The electromagnetic theories foundation of planar waveguide —	185
5.4.1	The general form of Maxwell's equation —	185
5.4.2	Maxwell's equations for planar waveguide —	187
5.4.3	Solutions of TE wave equations —	188
5.4.4	The modes of TE wave and cutoff condition —	192
5.4.5	Properties of waveguide mode —	196
5.5	Channel waveguide introduction —	197
5.5.1	Channel waveguide types —	197
5.5.2	Vector wave equation —	198
5.5.3	Approximate scalar equation and the method of separation of variables —	200
5.5.4	Other solutions of scalar equations —	201
5.6	Mode coupling theory in guided wave structures —	204
5.6.1	Basic concepts of the directional coupling —	204
5.6.2	Coupled mode equations —	206
5.6.3	Scalar-coupled wave equations —	207
5.6.4	Solutions of the scalar equations —	211
5.6.5	Periodic waveguide —	213
5.6.6	Waveguide mode transmission —	215
5.7	Semiconductor waveguide theory —	218
5.7.1	Methods for altering the refractive index of semiconductor —	218
5.7.2	Semiconductor planar waveguide —	221
5.7.3	Channel waveguide —	223
5.7.4	Coupling effect —	226
5.7.5	Losses in semiconductor waveguides —	230
5.8	The new progress of waveguide theory —	233
5.8.1	Second harmonic generation in a nonlinear waveguide —	233
5.8.2	Non-orthogonal coupled mode theory of waveguide —	236
5.9	Waveguide devices in insulating crystals —	238
5.9.1	Directional couplers —	239
5.9.2	Balanced bridge interferometers and cross-coupled waveguides —	241
5.9.3	Interference filters —	243

5.9.4	Coupled-mode filters — 244
5.9.5	The polarization selection devices — 247
5.9.6	Transmission gratings — 249
5.9.7	Reflection gratings — 250
5.9.8	Electro- and acousto-optic gratings — 250
5.9.9	Grating couplers — 253
5.10	Semiconductor waveguide device — 253
5.10.1	Semiconductor passive waveguide — 254
5.10.2	Electro-optic waveguide modulator — 260
5.10.3	Optoelectronic integrated circuit — 262
5.11	Application examples of optical waveguide — 263
5.11.1	The planar integrated optic RF spectrum analyzer — 263
5.11.2	The waveguide chip connector — 264
5.11.3	The channel waveguide A/D converter — 265
5.11.4	Guided-wave optical communication — 267
5.12	Introduction of MOEMS — 268
5.12.1	Introduction — 268
5.12.2	The diffractive microlens — 269
5.12.3	The refractive microlens — 270
5.12.4	MOEM system — 271
6	Light detection and detector — 273
6.1	Overview of photoelectric detector performance — 274
6.1.1	Responsivity — 274
6.1.2	Noise equivalent power — 275
6.1.3	Detectivity — 275
6.1.4	Quantum efficiency — 276
6.1.5	Response time — 276
6.1.6	Linear region — 276
6.1.7	Noise — 276
6.2	The working foundation of photodetectors — 278
6.2.1	External photoelectric effect — 279
6.2.2	Photoconductivity effect — 279
6.2.3	Photovoltaic effect — 281
6.2.4	Light thermal electric effect — 283
6.3	Photoelectric emission photodetector (based on external photoelectric effect) — 283
6.3.1	Working process and structure of the photomultiplier tube — 284
6.3.2	Main performance of the photomultiplier tube — 288
6.4	Photoconductive detector — 290
6.4.1	Overview — 290

6.4.2	Performance of the $\text{Hg}_{1-x}\text{Cd}_x\text{Te}$ photoconductive detector —	291
6.5	Photovoltaic detector —	295
6.5.1	Overview —	295
6.5.2	Brief introduction of the current characteristic of the PN junction photodiode —	295
6.5.3	Response rate and detection rate —	299
6.5.4	Noise —	300

7 Photoelectric imaging and imaging system — 303

7.1	Overview —	303
7.2	Image detector profiles —	303
7.2.1	Vacuum imaging device —	304
7.2.2	CCD imaging device —	305
7.2.3	CID imaging device —	306
7.3	Point-spread function and performance index based on the point-spread function —	307
7.3.1	Point-spread function —	307
7.3.2	Strehl ratio —	309
7.3.3	Relationship between circle surrounding energy and spatial frequency —	311
7.4	OTF —	312
7.5	Modulation transfer function —	313
7.5.1	Modulation —	313
7.5.2	Modulation transfer function —	313
7.6	MTF of the optical system —	315
7.6.1	Diffraction-limited MTF —	315
7.6.2	Aberrations effect —	315
7.6.3	Defocus —	316
7.7	Introduction to optical imaging system —	316
7.7.1	Staring array optical imaging system —	316
7.7.2	Scanning optical imaging system —	317
7.7.3	Optical imaging system performance —	318
7.8	Performance of staring array imaging system —	319
7.8.1	Field of view —	319
7.8.2	Noise and signal-to-noise ratio —	320
7.9	Further description of the scanning imaging system performance —	320
7.9.1	Scanning imaging system —	320
7.9.2	System noise of scanning imaging —	321

8	Fundamental of Nonlinear Optics — 323
8.1	Introduction — 323
8.1.1	Nonlinear wave function — 323
8.1.2	Slowly varying envelope approximation (SVEA) of equation — 324
8.1.3	Nonlinearity of material and its coupling with light wave — 326
8.2	Optical phase conjugate — 327
8.2.1	Definition of phase conjugate wave — 327
8.2.2	Comparison of PCM and CPM — 328
8.3	Three-wave mixing — 331
8.3.1	Phase matching three-wave mixing — 332
8.3.2	Phase mismatching three-wave mixing — 333
8.4	Degenerate four-wave mixing — 333
8.4.1	Forward conjugate wave generated by FWM — 334
8.4.2	Backward conjugate wave generated by FWM — 335
8.4.3	Experimental study of DFWM phase conjugate — 338
8.5	Near-Degenerate four wave mixing — 341
8.6	DFWM Resonance — 345
8.6.1	Qualitative description — 345
8.6.2	Quantitative discussion — 346
8.7	Photon echo — 353
8.7.1	Qualitative description of photon echo of two-energy level system — 353
8.7.2	Qualitative results of photon echo phase conjugate — 357
8.8	Stimulated scattering — 362
8.8.1	Stimulated Raman scattering — 362
8.8.2	Stimulating Brillouin scattering — 363
8.9	Photorefractive effect and associated materials — 366
8.9.1	Photorefractive effect — 367
8.9.2	Some photorefractive materials — 374
8.10	Self-pumped phase conjugate — 381
8.10.1	Two reflectors — 382
8.10.2	Single reflector — 383
8.10.3	No external mirror — 385
