List of Figures	v
1. Introduction	1
1.1. Discovery of β -cells and diabetes	1
1.2. β -cell biology and function	3
1.3. β -cell development	4
1.4. β -cell maturation	6
1.5. Zebrafish as a model for studying β -cell biology	7
1.6. Factors regulating β -cell proliferation	9
1.7. β -cell aging and heterogeneity	10
2. Spatial heterogeneity in a developing zebrafish islet	13
2.1. Spatial heterogeneity in β -cell proliferation during development of the zebrafish islet	13
2.2. Spatial heterogeneity in β -cell function during development of the zebrafish islet	16
2.3. Investigating functional differences between younger and older	20

β -cells using histone retention assay

3. NF- κ B signaling as a marker of age-associated heterogeneity among β -cells	22
3.1. β -cell proliferation declines with age in zebrafish	22
3.2. Age-associated molecular heterogeneity among the β -cells	25
3.3. Heterogeneous activation of NF- κ B signaling in the β -cells with age	28
3.4. β -cells with higher NF- κ B reporter activity proliferate less compared to their neighbors	33
3.5. <i>socs2</i> is enriched in NF- κ B:GFP ^{high} β -cells and inhibits proliferation	37
3.6. Immune cells infiltration as a potential source of cytokines in zebrafish islet	40
4. Discussion and future directions	44
4.1. Heterogeneity and aging	44
4.2. Inverse correlation between proliferation and function	45
4.3. Regulators of β -cell proliferation with age	46
4.4. Inflammation and β -cells	46
4.5. Immune cell- islet cross talk and other sources of cytokines in the islet microenvironment	48

4.6. Future directions	49
5. Methods and Materials	51
5.1. Zebrafish strains and husbandry	51
5.2. Cloning and constructs	51
5.3. Analysis of proliferation using mosaic integration in the genome	53
5.4. Tissue collection and sectioning	53
5.5. Cell counting	53
5.6. EdU labeling	54
5.7. Immunofluorescence and image acquisition	54
5.8. GCaMP6s image acquisition and analysis	55
5.9. Fluorescent intensity analysis	55
5.10. FACS and gene profile analysis	56
5.11. Statistical analysis	58
