

Contents

1. Introduction	1
2. $\mathcal{N} = 4$ amplitudes in the multi-Regge limit	4
2.1 Multi-Regge kinematics	4
2.2 Symmetries and soft limits	6
2.3 Single-valued multiple polylogarithms	7
3. The BFKL equation at finite coupling	9
3.1 6-points	9
3.2 7-points MHV	13
3.3 Summary and extension to any helicity	18
4. From symbols to functions in MRK	19
4.1 Maximal degree of logarithmic divergence from the OPE	20
4.2 The function-level 7-particle 2-loop MHV amplitude in MRK	23
4.3 All function-level 2-loop MHV amplitudes in MRK	25
5. Extracting the NLO central emission block	26
5.1 Building the Fourier-Mellin representation	28
5.2 A worked example	31
6. Higher-loop NLLA predictions	33
6.1 A nested sum evaluation algorithm	34
6.2 Evaluation by Fourier-Mellin convolutions	37
7. Conclusions	41
A. (Single-valued) A_2 polylogarithms	43
A.1 A convenient basis	43
A.2 Exchange identities	45
B. Explicit Results	46
