1	Introduction	2
2	Review of key concepts	6
2.1	Standard Model masses from anomalous dimensions	6
2.2	Higgs shift symmetry breaking	10
2.3	Conformal symmetry breaking	11
3	Zero-temperature effective field theory	14
3.1	Scalar potential: Matching two descriptions	14
3.2	Canonical variables	16
3.3	Parametric form of the scalar potential	17
3.4	Key properties of the two-field potential and preliminary analysis	18
4	Description at finite temperature	21
5	CP violation from varying Yukawa interactions	25
5.1	CP violation with hierarchical quark mixings	26
5.2	CP violation with non-hierarchical quark mixings	26
6	Numerical study	29
6.1	Parameter space	30
6.2	Details of the numerical study	33
6.3	Results: Phase transition	35
6.4	Results: Baryon asymmetry	38
7	Collider bounds and other experimental tests	40
7.1	Dilaton production	40
7.2	Flavour violation	43
7.3	Higgs couplings and CP violation	43
7.4	Gravitational waves	46
8	Conclusions	47
A	Vacuum tunnelling	49
