1	Introduction	1
2	Correlation functions of two currents	2
2.1	Isospin decomposition and constraints	3
2.2	Predictions from chiral perturbation theory	5
3	Lattice techniques	7
3.1	Lattice contractions and their symmetry properties	7
3.2	Physical matrix elements	9
3.3	Simulation Details	10
3.4	Renormalisation	17
4	Data quality and lattice artefacts	18
4.1	Plateaux and excited state contributions	19
4.2	Anisotropy effects	20
4.3	Finite volume effects	23
4.4	Finite momentum and boost invariance	23
5	Results for individual lattice contractions	25
5.1	Light quarks	25
5.2	Quark mass dependence	27
5.3	Test of factorisation	28
5.4	Subtraction term for the annihilation graph	33
6	Results for isospin amplitudes	33
6.1	Isospin amplitudes	33
6.2	Comparison with chiral perturbation theory	36
7	Summary	39
