A Word from Tanzania Wildlife Research Institute	6
Preface – Before the KiLi Project...	7
First steps of the KiLi Project...	7
Summary – Results of the KiLi Project	8
Maswali ya Jumla na Miudo mbinu ya Mradi wa KiLi	9
jitihada za mradi	9
INTRODUCTION	22
THE KILI PROJECT	22
Structure of the KiLi Research Unit	23
Overview of the vegetation and climate of Kilimanjaro	24
Rainfall map of Kilimanjaro	26
Central Project 1 – Study design of the KiLi Project	27
Central research concept and objectives	27
List of educated PhD, Master and Bachelor students 2010–2018	30
Plot owner	33
Central Project 2 – Central database of the KiLiProject	35
Temperature as a driver of biodiversity	35
Subproject 1 – Ecological climatology and remote sensing	36
CLIMATE PARAMETERS – Eco-meteorological characteristics of the southern slopes of Kilimanjaro, Tanzania	36
TEMPERATURE – Interpolation of monthly air temperature at Mt Kilimanjaro, Tanzania	38
PRECIPITATION – Observations of long-term trends and seasonal variability of rainfall at lowland stations	39
Seasonality of atmospheric water input at the southern slopes of Mt Kilimanjaro	40
EVAPOTRANSPIRATION – A glimpse at short-term controls of evapotranspiration along the southern slopes of Kilimanjaro	42
REMOTE SENSING – Spatial patterns of sea surface temperature influences on east African precipitation	43
Seasonal and long-term vegetation dynamics from 1-km GIMMS-based DVI time series at Mt Kilimanjaro, Tanzania	44
Subproject 2 – Patterns in water flux and carbon cycle controls along land-use and climate gradients	46
The hidden part of Mount Kilimanjaro: fine root biomass and production	46
Distribution and discharge of irrigation canals around Mt Kilimanjaro	51
Subprojects 2 & 3 – Soil characteristics at Mt Kilimanjaro	55
Subprojects 2 & 4 – Variability of soil physical parameters, soil moisture and soil erodibility in the coffee and homegarden ecosystems	59
Subproject 3 – Linking nutrient cycles, land-use and biodiversity along an altitudinal gradient at Mt Kilimanjaro	61
Impacts of climate and land-use on N ₂ O and CH ₄ fluxes from tropical ecosystems in the Mt Kilimanjaro region, Tanzania	61
Carbon and nutrient input by litter fall and litter decomposition	62
Effects of elevation on soil microbial communities and organic matter composition	63
Subproject 4 – Plant diversity and performance in relation to climate and land-use on Mt Kilimanjaro:	
communities, species, populations, ecological genetics	64
Tree growth and water use dynamics at Mt Kilimanjaro, Tanzania	64
Africa's highest mountain harbours Africa's tallest trees	65
Generation of a high-quality physiographic map as a base for ecotourism, nature conservation and land planning	67
Tree inventory of Mt Kilimanjaro	69
Mountains become islands: ecological dangers of increasing land-use in East Africa	72
Lichen diversity on Mt Kilimanjaro	74

4

Natural forest regeneration at Mt Kilimanjaro	75
Tropical tree species` response to the combined change of temperature and water	76
How will Kilimanjaro’s herbaceous flora respond to climate warming?	79
Assessing the structure and complexity of Kilimanjaro’s vegetation	81
Quantifying aboveground biomass along Kilimanjaro’s elevational gradient, and how it changes with land-use	82
Effects of selective logging on tree population structure in the montane <i>Ocotea</i> -forest	83
Phylogenetic diversity analyses reveal contrasting responses of herb, shrub, tree, liana and epiphyte tropical communities to human disturbance	84
Usable wild plant species in relation to elevation and land-use at Mt Kilimanjaro, Tanzania	87
Land-use / land cover mapping of the Kilimanjaro savanna ecosystem	89
Studies on late Quaternary environmental dynamics (vegetation, biodiversity, climate, soils, fire and human impact) on Mt Kilimanjaro (associate project 1)	91
Does drought make a difference?	96
A milestone in pollen identification – the East African Pollen and Spore Atlas	98
Subproject 5 – Plant functional traits translated into vegetation dynamics – Responses to environmental factors and effects on ecosystem functions of the Kilimanjaro region	99
Plant traits and their relationships with environmental conditions and ecosystem properties	99
Extraction of non-timber forest products on the slopes of Mt Kilimanjaro	102
Modelling biosphere-pedosphere interaction at Mt Kilimanjaro	105
Subproject 6 – Biodiversity and ecosystem functioning: birds and bats as seed dispersers and arthropod predators	107
Frugivorous and insectivorous bats on the slopes of Mt Kilimanjaro	107
Diversity of birds on Mt Kilimanjaro and their importance for ecosystem processes and functions	114
Subproject 7 – Effects of climate and land-use change on biodiversity and ecosystem functioning of pollinators and decomposers	122
Bees, birds, and bats contribute to higher yields on coffee farms on Mt Kilimanjaro	122
Temperature as a driver of bee diversity	123
Mammals at Mt Kilimanjaro	123
Diversity and taxonomy of millipedes from Mt Kilimanjaro	126
Low contribution of invertebrates to decomposition of organic matter along an elevational gradient and a land-use gradient on the southern slopes of Mt Kilimanjaro	130
Abundance of ground-living arthropods along the elevational gradient	131
Activity of soil fauna depends on soil humidity	132
Amphibian diversity on Mt Kilimanjaro	134
Land Snails and Slugs (Gastropoda) of Mt Kilimanjaro	137
Central Project 1 – Orthoptera Research: Grasshoppers & Bushcrickets as bioindicators and to illuminate regional and large scale speciation patterns in Africa	141
Outreach activities of the KiLi Project	146
The KiLi Project and the Media	152
Tanzanian Counterparts of the KiLi Project	153
Conclusions & Outlook	155
List of authors	157
List of publications by the KiLi Project 2010–2018	159
Photo credits	164
