## Contents

<b>1. Introduction</b>	<b>2</b>
<b>2. Setup of the simulations</b>	<b>7</b>
<b>3. Lepton-pair production in association with bottom quarks in the 4FS</b>	<b>8</b>
3.1 MADGRAPH5_AMC@NLO and POWHEG-BOX implementations	8
3.2 Identification of the reference energy scale for lepton-pair production in association with a $b$ -quark pair	11
3.3 The $\ell^+\ell^-b\bar{b}$ transverse-momentum distribution	12
3.4 The $p_{\perp}^{\ell^+\ell^-}$ distribution, inclusive over $b$ -quark contributions, in different approximations	14
<b>4. Inclusive lepton-pair transverse-momentum distribution</b>	<b>17</b>
4.1 Four- vs five-flavour schemes	17
4.1.1 Generalities	17
4.1.2 Bottom-quark contributions to DY in 4FS and 5FS	18
4.2 Merging 4FS and 5FS results: bottom-quark effects on the $p_{\perp}^{\ell^+\ell^-}$ distribution	19
<b>5. Interplay between NC-DY and CC-DY</b>	<b>23</b>
5.1 Transferring the bottom-quark effects to the simulation of charged-current Drell-Yan	23
5.2 Template-fit determination of $m_W$	24
<b>6. Conclusions</b>	<b>29</b>
<b>7. Acknowledgements</b>	<b>30</b>
<b>A. Appendix: Differential observables in <math>\ell^+\ell^-b\bar{b}</math> production</b>	<b>31</b>
A.1 Jet multiplicities	31
A.2 $p_{\perp}^{\ell^+\ell^-}$ with extra tagged $b$ jets	33
A.3 Invariant mass of the two hardest $b$ jets	34
A.4 Invariant mass of the two hardest $B$ hadrons with or without tagged $b$ jets	35
A.5 $y - \phi$ distance of the two hardest $b$ jets	37
A.6 $y - \phi$ distance of the two hardest $B$ hadrons with or without tagged $b$ jets	37
A.7 Transverse momentum distributions of the two hardest $b$ jets	40
A.8 Pseudo-rapidity distributions of the two hardest $b$ jets	41
