	<b>Preface of First Edition (and Guidelines How to Use This Textbook)</b>	<i>xvii</i>
	<b>Why a Second Edition?</b>	<i>xviii</i>
	<b>Notation</b>	<i>xxi</i>
<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	What Is Chemical Technology?	1
1.2	The Chemical Industry	2
1.3	The Changing Global Economic Map	6
<b>2</b>	<b>Chemical Aspects of Industrial Chemistry</b>	<b>19</b>
2.1	Stability and Reactivity of Chemical Bonds	19
2.1.1	Factors that Influence the Electronic Nature of Bonds and Atoms	19
2.1.2	Steric Effects	20
2.1.3	Classification of Reagents	21
2.2	General Classification of Reactions	21
2.2.1	Acid–Base-Catalyzed Reactions	22
2.2.2	Reactions via Free Radicals	23
2.2.3	Nucleophilic Substitution Reactions	24
2.2.4	Reactions via Carbocations	24
2.2.5	Electrophilic Substitution Reactions at Aromatic Compounds	25
2.2.6	Electrophilic Addition Reactions	27
2.2.7	Nucleophilic Addition Reactions	27
2.2.8	Asymmetric Synthesis	28
2.3	Catalysis	30
2.3.1	Introduction and General Aspects	30
2.3.2	Homogeneous, Heterogeneous, and Biocatalysis	35
2.3.3	Production and Characterization of Heterogeneous Catalysts	38
2.3.4	Deactivation of Catalysts	41
2.3.5	Future Trends in Catalysis Research	43
<b>3</b>	<b>Thermal and Mechanical Unit Operations</b>	<b>45</b>
3.1	Properties of Gases and Liquids	46
3.1.1	Ideal and Real Gas	46
3.1.2	Heat Capacities and the Joule–Thomson Effect	50
3.1.3	Physical Transformations of Pure Substances: Vaporization and Melting	53
3.1.4	Transport Properties (Diffusivity, Viscosity, Heat Conduction)	58
3.1.4.1	Basic Equations for Transfer of Heat, Mass, and Momentum	58
3.1.4.2	Transport Coefficients of Gases	61
3.1.4.3	Transport Coefficients of Liquids	66

<b>3.2</b>	<b>Heat and Mass Transfer in Chemical Engineering</b>	<b>69</b>
3.2.1	Heat Transport	69
3.2.1.1	<i>Heat Conduction</i>	69
3.2.1.2	<i>Heat Transfer by Convection (Heat Transfer Coefficients)</i>	70
3.2.1.3	<i>Boiling Heat Transfer</i>	80
3.2.1.4	<i>Heat Transfer by Radiation</i>	81
3.2.1.5	<i>Transient Heat Transfer by Conduction and Convection</i>	82
3.2.2	Mass Transport	86
3.2.2.1	<i>Forced Flow in Empty Tubes and Hydrodynamic Entrance Region</i>	86
3.2.2.2	<i>Steady-State and Transient Diffusive Mass Transfer</i>	87
3.2.2.3	<i>Diffusion in Porous Solids</i>	89
<b>3.3</b>	<b>Thermal Unit Operations</b>	<b>93</b>
3.3.1	Heat Exchangers (Recuperators and Regenerators)	94
3.3.2	Distillation	99
3.3.2.1	<i>Distillation Principles</i>	100
3.3.2.2	<i>Design of Distillation Columns (Ideal Mixtures)</i>	104
3.3.2.3	<i>Azeotropic, Extractive, and Pressure Swing Distillation</i>	108
3.3.2.4	<i>Reactive Distillation</i>	110
3.3.3	Absorption (Gas Scrubbing)	110
3.3.3.1	<i>Absorption Principles</i>	110
3.3.3.2	<i>Design of Absorption Columns</i>	116
3.3.4	Liquid–Liquid Extraction	118
3.3.4.1	<i>Extraction Principles</i>	118
3.3.4.2	<i>Design of Extraction Processes</i>	120
3.3.5	Adsorption	122
3.3.5.1	<i>Adsorption Equilibrium and Adsorption Isotherms</i>	122
3.3.5.2	<i>Adsorption Kinetics (Single Particle)</i>	129
3.3.5.3	<i>Design of Adsorption Processes</i>	131
3.3.6	Fluid–Solid Extraction	136
3.3.6.1	<i>Principles of Fluid–Solid Extraction</i>	136
3.3.6.2	<i>Design of Fluid–Solid Extractions</i>	138
3.3.7	Crystallization	139
3.3.7.1	<i>Ideal Binary Eutectic Phase System</i>	139
3.3.7.2	<i>Ideal Binary Phase System with Both Solids Completely Soluble in One Another</i>	140
3.3.8	Separation by Membranes	141
3.3.8.1	<i>Principles of Membrane Separation</i>	141
3.3.8.2	<i>Applications of Membrane Separation Processes</i>	144
<b>3.4</b>	<b>Mechanical Unit Operations</b>	<b>149</b>
3.4.1	Conveyance of Fluids	149
3.4.1.1	<i>Pressure Loss in Empty Tubes</i>	149
3.4.1.2	<i>Pressure Loss in Fixed, Fluidized, and Entrained Beds</i>	154
3.4.1.3	<i>Compressors and Pumps</i>	157
3.4.2	Contacting and Mixing of Fluids	159
3.4.3	Crushing and Screening of Solids	160
3.4.3.1	<i>Particle Size Reduction</i>	160
3.4.3.2	<i>Particle Size Analysis</i>	160
3.4.3.3	<i>Screening and Classification of Particles (Size Separation)</i>	164
3.4.3.4	<i>Solid–Solid Separation (Sorting of Different Solids)</i>	164
3.4.4	Separation of Solids from Fluids	164
3.4.4.1	<i>Filtration</i>	164
3.4.4.2	<i>Separation of Solids from Fluids by Sedimentation</i>	165
3.4.4.3	<i>Screening and Classification of Particles (Size Separation)</i>	167

<b>4</b>	<b>Chemical Reaction Engineering</b>	<b>171</b>
4.1	<b>Main Aspects and Basic Definitions of Chemical Reaction Engineering</b>	<b>171</b>
4.1.1	Design Aspects and Scale-up Dimensions of Chemical Reactors	172
4.1.2	Speed of Chemical and Biochemical Reactions	172
4.1.3	Influence of Reactor Type on Productivity	174
4.1.4	Terms Used to Characterize the Composition of a Reaction Mixture	174
4.1.5	Terms Used to Quantify the Result of a Chemical Conversion	175
4.1.6	Reaction Time and Residence Time	175
4.1.7	Space Velocity and Space–Time Yield	176
4.2	<b>Chemical Thermodynamics</b>	<b>177</b>
4.2.1	Introduction and Perfect Gas Equilibria	177
4.2.2	Real Gas Equilibria	184
4.2.3	Equilibrium of Liquid–Liquid Reactions	186
4.2.4	Equilibrium of Gas–Solid Reactions	188
4.2.5	Calculation of Simultaneous Equilibria	190
4.3	<b>Kinetics of Homogeneous Reactions</b>	<b>192</b>
4.3.1	Rate Equation: Influence of Temperature and Reaction Order	192
4.3.1.1	<i>First-Order Reaction</i>	195
4.3.1.2	<i>Reaction of nth Order</i>	196
4.3.1.3	<i>Second-Order Reaction</i>	196
4.3.2	Parallel Reactions and Reactions in Series	197
4.3.2.1	<i>Two Parallel First-Order Reactions</i>	197
4.3.2.2	<i>Two First-Order Reactions in Series</i>	197
4.3.3	Reversible Reactions	200
4.3.4	Reactions with Varying Volume (for the Example of a Batch Reactor)	203
4.4	<b>Kinetics of Fluid–Fluid Reactions</b>	<b>204</b>
4.4.1	Mass Transfer at a Gas–Liquid Interface (Two-Film Theory)	205
4.4.2	Mass Transfer with (Slow) Homogeneous Reaction in the Bulk Phase	207
4.4.3	Mass Transfer with Fast or Instantaneous Reaction near or at the Interface	208
4.5	<b>Kinetics of Heterogeneously Catalyzed Reactions</b>	<b>213</b>
4.5.1	Spectrum of Factors Influencing the Rate of Heterogeneously Catalyzed Reactions	213
4.5.2	Chemical Reaction Rate: Surface Kinetics	217
4.5.2.1	<i>Sorption on the Surface of Solid Catalysts</i>	217
4.5.2.2	<i>Rate Equations for Heterogeneously Catalyzed Surface Reactions</i>	217
4.5.3	Reaction on a Solid Catalyst and Interfacial Transport of Mass and Heat	222
4.5.3.1	<i>Interaction of External Mass Transfer and Chemical Reaction</i>	222
4.5.3.2	<i>Combined Influence of External Mass and Heat Transfer on the Effective Rate</i>	225
4.5.4	Chemical Reaction and Internal Transport of Mass and Heat	232
4.5.4.1	<i>Pore Diffusion Resistance and Effective Reaction Rate</i>	232
4.5.4.2	<i>Combined Influence of Pore Diffusion and Intraparticle Heat Transport</i>	238
4.5.5	Simultaneous Occurrence of Interfacial and Internal Mass Transport Effects	240
4.5.5.1	<i>Irreversible First-Order Reaction</i>	240
4.5.5.2	<i>Reversible First-Order Reaction with the Influence of External and Internal Mass Transfer</i>	242
4.5.6	Influence of External and Internal Mass Transfer on Selectivity	245
4.5.6.1	<i>Influence of External Mass Transfer on the Selectivity of Reactions in Series</i>	245
4.5.6.2	<i>Influence of External Mass Transfer on the Selectivity of Parallel Reactions</i>	247
4.5.6.3	<i>Influence of Pore Diffusion on the Selectivity of Reactions in Series</i>	248
4.5.6.4	<i>Influence of Pore Diffusion on the Selectivity of Parallel Reactions</i>	251
4.6	<b>Kinetics of Gas–Solid Reactions</b>	<b>253</b>
4.6.1	Spectrum of Factors Influencing the Rate of Gas–Solid Reactions	254
4.6.2	Reaction of a Gas with a Nonporous Solid	255

4.6.2.1	<i>Survey of Border Cases and Models for a Reaction of a Gas with a Nonporous Solid</i>	255
4.6.2.2	<i>Shrinking Nonporous Unreacted Core and Solid Product Layer</i>	255
4.6.2.3	<i>Shrinking Nonporous Unreacted Core and Gaseous Product(s)</i>	257
4.6.3	<b>Reaction of a Gas with a Porous Solid</b>	260
4.6.3.1	<i>Survey of Border Cases and Models for a Reaction of a Gas with a Porous Solid</i>	260
4.6.3.2	<i>Basic Equations for the Conversion of a Porous Solid with a Gaseous Reactant</i>	261
4.6.3.3	<i>General Closed Solution by Combined Model (Approximation)</i>	261
4.6.3.4	<i>Homogeneous Uniform Conversion Model (No Concentration Gradients)</i>	263
4.6.3.5	<i>Shrinking Unreacted Core Model (Rate Determined by Diffusion Through Product Layer)</i>	263
4.7	<b>Criteria Used to Exclude Interphase and Intraparticle Mass and Heat Transport Limitations in Gas–Solid Reactions and Heterogeneously Catalyzed Reactions</b>	265
4.7.1	External Mass Transfer Through Boundary Layer	265
4.7.2	External Heat Transfer	266
4.7.3	Internal Mass Transfer	266
4.7.4	Internal Heat Transfer	266
4.8	<b>Kinetics of Homogeneously or Enzyme-catalyzed Reactions</b>	269
4.8.1	Homogeneous and Enzyme Catalysis in a Single-Phase System	269
4.8.2	Homogeneous Two-Phase Catalysis	271
4.9	<b>Kinetics of Gas–Liquid Reactions on Solid Catalysts</b>	273
4.9.1	Introduction	273
4.9.2	High Concentration of Liquid Reactant B (or Pure B) and Slightly Soluble Gas	275
4.9.3	Low Concentration of Liquid Reactant B and Highly Soluble Gas and/or High Pressure	275
4.10	<b>Chemical Reactors</b>	276
4.10.1	Overview of Reactor Types and Their Characteristics	277
4.10.1.1	<i>Brief Outline of Ideal and Real Reactors</i>	277
4.10.1.2	<i>Classification of Real Reactors Based on the Mode of Operation</i>	278
4.10.1.3	<i>Classification of Real Reactors According to the Phases</i>	279
4.10.2	Ideal Isothermal Reactors	284
4.10.2.1	<i>Well-Mixed (Discontinuous) Isothermal Batch Reactor</i>	285
4.10.2.2	<i>Continuously Operated Isothermal Ideal Tank Reactor</i>	286
4.10.2.3	<i>Continuously Operated Isothermal Ideal Tubular Reactor</i>	286
4.10.2.4	<i>Continuously Operated Isothermal Tubular Reactor with Laminar Flow</i>	287
4.10.2.5	<i>Continuously Operated Isothermal Cascade of Tank Reactors</i>	290
4.10.2.6	<i>Ideal Isothermal Tubular Recycle Reactor</i>	290
4.10.2.7	<i>Comparison of the Performance of Ideal Isothermal Reactors</i>	291
4.10.3	Non-isothermal Ideal Reactors and Criteria for Prevention of Thermal Runaway	294
4.10.3.1	<i>Well-Mixed (Discontinuously Operated) Non-isothermal Batch Reactor</i>	295
4.10.3.2	<i>Continuously Operated Non-isothermal Ideal Tank Reactor (CSTR)</i>	299
4.10.3.3	<i>Continuously Operated Non-isothermal Ideal Tubular Reactor</i>	303
4.10.3.4	<i>Optimum Operating Lines of Continuous Ideal Non-isothermal Reactors</i>	306
4.10.4	Non-ideal Flow and Residence Time Distribution	310
4.10.4.1	<i>Pulse Experiment</i>	310
4.10.4.2	<i>Step Experiment</i>	311
4.10.5	Tanks-in-Series Model	313
4.10.5.1	<i>Residence Time Distribution of a Cascade of Ideal Stirred Tank Reactors</i>	313
4.10.5.2	<i>Calculation of Conversion by the Tanks-in-Series Model</i>	315
4.10.6	Dispersion Model	315
4.10.6.1	<i>Axial Dispersion and Residence Time Distribution</i>	315
4.10.6.2	<i>Calculation of Conversion by the Dispersion Model</i>	319
4.10.6.3	<i>Dispersion and Conversion in Empty Pipes</i>	321
4.10.6.4	<i>Dispersion of Mass and Heat in Fixed Bed Reactors</i>	323
4.10.6.5	<i>Radial Variations in Bed Structure: Wall Effects in Narrow Packed Beds</i>	324
4.10.7	Modeling of Fixed Bed Reactors	325
4.10.7.1	<i>Fundamental Balance Equations of Fixed Bed Reactors</i>	325

4.10.7.2	<i>Criteria Used to Exclude a Significant Influence of Dispersion in Fixed Bed Reactors</i>	327
4.10.7.3	<i>Radial Heat Transfer in Packed Bed Reactors and Methods to Account for This</i>	332
4.10.8	Novel Developments in Reactor Technology	336
4.10.8.1	<i>Hybrid (Multifunctional) Reactors</i>	337
4.10.8.2	<i>Monolithic Reactors</i>	338
4.10.8.3	<i>Microreactors</i>	339
4.10.8.4	<i>Adiabatic Reactors with Periodic Flow Reversal</i>	342
<b>4.11</b>	<b>Measurement and Evaluation of Kinetic Data</b>	<b>344</b>
4.11.1	Principal Methods for Determining Kinetic Data	345
4.11.1.1	<i>Microkinetics</i>	345
4.11.1.2	<i>Macrokinetics</i>	345
4.11.1.3	<i>Laboratory Reactors</i>	345
4.11.1.4	<i>Pros and Cons of Integral and Differential Method</i>	347
4.11.2	Evaluation of Kinetic Data (Reaction Orders, Rate Constants)	347
4.11.3	Laboratory-Scale Reactors for Kinetic Measurements	350
4.11.4	Transport Limitations in Experimental Catalytic Reactors	351
4.11.4.1	<i>Ideal Plug Flow Behavior: Criteria to Exclude the Influence of Dispersion</i>	352
4.11.4.2	<i>Gradientless Ideal Particle Behavior: Criteria to Exclude the Influence of Interfacial and Internal Transport of Mass and Heat</i>	354
4.11.4.3	<i>Criterion to Exclude the Influence of the Dilution of a Catalytic Fixed Bed</i>	355
4.11.5	Case Studies for the Evaluation of Kinetic Data	356
4.11.5.1	<i>Case Study I: Thermal Conversion of Naphthalene</i>	356
4.11.5.2	<i>Case Study II: Heterogeneously Catalyzed Hydrogenation of Hexene</i>	358
4.11.5.3	<i>Case Study III: Heterogeneously Catalyzed Multiphase Reaction</i>	360
4.11.5.4	<i>Case Study IV: Non-isothermal Oxidation of Carbon Nanotubes and Fibers</i>	363

## **5 Raw Materials, Products, Environmental Aspects, and Costs of Chemical Technology 371**

<b>5.1</b>	<b>Raw Materials of Industrial Organic Chemistry and Energy Sources</b>	<b>372</b>
5.1.1	Energy Consumption, Reserves, and Resources of Fossil Fuels and Renewables	373
5.1.1.1	<i>Global and Regional Energy Consumption and Fuel Shares</i>	373
5.1.1.2	<i>World Energy Consumption and World Population</i>	380
5.1.1.3	<i>Economic and Social Aspects of Energy Consumption</i>	380
5.1.1.4	<i>Conventional and Non-conventional Fossil Fuels</i>	387
5.1.1.5	<i>Nuclear Power</i>	389
5.1.1.6	<i>Renewable Energy</i>	390
5.1.1.7	<i>Energy Mix of the Future</i>	392
5.1.1.8	<i>Global Warming</i>	395
5.1.1.9	<i>Ecological Footprint and Energy Consumption</i>	399
5.1.1.10	<i>Energy Demand and Energy Mix to Reconcile the World's Pursuit of Welfare and Happiness with the Necessity to Preserve the Integrity of the Biosphere</i>	401
5.1.2	Composition of Fossil Fuels and Routes for the Production of Synthetic Fuels	403
5.1.3	Natural Gas and Other Technical Gases	403
5.1.3.1	<i>Properties of Natural Gas and Other Technical Gases</i>	403
5.1.3.2	<i>Conditioning of Natural Gas, Processes, and Products Based on Natural Gas</i>	406
5.1.4	Crude Oil and Refinery Products	410
5.1.4.1	<i>Production, Reserves, and Price of Crude Oil</i>	410
5.1.4.2	<i>Properties of Crude Oil</i>	412
5.1.4.3	<i>Properties of Major Refinery Products</i>	414
5.1.4.4	<i>Refinery Processes</i>	415
5.1.5	Coal and Coal Products	418
5.1.5.1	<i>Properties of Coal and Other Solid Fuels</i>	418
5.1.5.2	<i>Processes and Products Based on Coal</i>	420
5.1.6	Renewable Raw Materials	422
5.1.6.1	<i>Base Chemicals from Renewable Raw Materials</i>	422

5.1.6.2	<i>Fats and Vegetable Oils</i>	423
5.1.6.3	<i>Carbohydrates</i>	426
5.1.6.4	<i>Extracts and Excreta from Plants</i>	428
5.1.7	Energy Consumption in Human History	429
5.1.7.1	<i>Time Travel No. 1: Global Energy Consumption from 10 000 BCE Until 2010</i>	429
5.1.7.2	<i>Time Travel No. 2: From Industrial Revolution to Modern Energy Systems</i>	429
5.1.7.3	<i>Time Travel No. 3: Building of Khufu's Giant Pyramid in Ancient Egypt</i>	433
5.1.8	Power-to-X and Hydrogen Storage Technologies	434
5.1.8.1	<i>Hydrogen: Compressed and Cryogenic</i>	436
5.1.8.2	<i>Chemical Hydrogen Storage: General Considerations in Gaseous Compounds</i>	440
5.1.8.3	<i>Chemical Hydrogen Storage in Gaseous Compounds</i>	440
5.1.8.4	<i>Chemical Hydrogen Storage in Liquid Compounds</i>	441
<b>5.2</b>	<b>Inorganic Products and Raw Materials</b>	<b>448</b>
5.2.1	Nonmetallic Inorganic Materials	448
5.2.2	Metals	453
<b>5.3</b>	<b>Organic Intermediates and Final Products</b>	<b>469</b>
5.3.1	Alkanes and Syngas	469
5.3.2	Alkenes, Alkynes, and Aromatic Hydrocarbons	472
5.3.3	Organic Intermediates Functionalized with Oxygen, Nitrogen, or Halogens	479
5.3.3.1	<i>Alcohols</i>	481
5.3.3.2	<i>Ethers</i>	484
5.3.3.3	<i>Epoxides</i>	484
5.3.3.4	<i>Aldehydes</i>	485
5.3.3.5	<i>Ketones</i>	487
5.3.3.6	<i>Acids</i>	488
5.3.3.7	<i>Amines and Nitrogen-Containing Intermediates</i>	490
5.3.3.8	<i>Lactams, Nitriles, and Isocyanates</i>	491
5.3.3.9	<i>Halogenated Organic Intermediates</i>	493
5.3.4	Polymers	495
5.3.4.1	<i>Polyolefins and Polydienes</i>	496
5.3.4.2	<i>Vinyl Polymers and Polyacrylates</i>	497
5.3.4.3	<i>Polyesters, Polyamides, and Polyurethanes</i>	501
5.3.5	Detergents and Surfactants	503
5.3.5.1	<i>Structure and Properties of Detergent and Surfactants</i>	503
5.3.5.2	<i>Cationic Detergents</i>	504
5.3.5.3	<i>Anionic Detergents</i>	504
5.3.5.4	<i>Nonionic Detergents</i>	505
5.3.6	Fine Chemicals	507
5.3.6.1	<i>Dyes and Colorants</i>	508
5.3.6.2	<i>Adhesives</i>	508
5.3.6.3	<i>Fragrance and Flavor Chemicals</i>	508
5.3.6.4	<i>Pesticides</i>	508
5.3.6.5	<i>Vitamins, Food, and Animal Feed Additives</i>	510
5.3.6.6	<i>Pharmaceuticals</i>	510
<b>5.4</b>	<b>Environmental Aspects of Chemical Technology</b>	<b>512</b>
5.4.1	Air Pollution	512
5.4.2	Water Consumption and Water Footprint	515
5.4.2.1	<i>Water Sources and Water Consumption</i>	515
5.4.2.2	<i>Water Footprint and Water Availability</i>	517
5.4.3	Plastic Production, Pollution, and Recycling of Plastic Waste	523
5.4.3.1	<i>Global Situation</i>	523
5.4.3.2	<i>Plastic Production and Recycling of Plastic Waste in Europe</i>	526
5.4.4	"Green Chemistry" and Quantifying the Environmental Impact of Chemical Processes	527

<b>5.5</b>	<b>Production Costs of Fuels and Chemicals Manufacturing</b>	<b>530</b>
5.5.1	Price of Chemical Products	530
5.5.2	Investment Costs	530
5.5.3	Variable Costs	532
5.5.4	Operating Costs (Fixed and Variable Costs)	533
<b>6</b>	<b>Examples of Industrial Processes</b>	<b>537</b>
<b>6.1</b>	<b>Ammonia Synthesis</b>	<b>537</b>
6.1.1	Historical Development of Haber–Bosch Process	537
6.1.2	Thermodynamics of Ammonia Synthesis	539
6.1.3	Kinetics and Mechanism of Ammonia Synthesis	540
6.1.4	Technical Ammonia Process and Synthesis Reactors	542
<b>6.2</b>	<b>Syngas and Hydrogen</b>	<b>547</b>
6.2.1	Options to Produce Syngas and Hydrogen (Overview)	547
6.2.2	Syngas from Solid Fuels (Coal, Biomass)	551
6.2.2.1	<i>Basic Principles and Reactions of Syngas Production from Solid Fuels</i>	551
6.2.2.2	<i>Syngas Production by Gasification of Solid Fuels</i>	552
6.2.2.3	<i>Case Study: Syngas and Hydrogen by Gasification of Biomass</i>	553
6.2.3	Syngas by Partial Oxidation of Heavy Oils	560
6.2.4	Syngas by Steam Reforming of Natural Gas	562
<b>6.3</b>	<b>Sulfuric Acid</b>	<b>565</b>
6.3.1	Reactions and Thermodynamics of Sulfuric Acid Production	565
6.3.2	Production of SO <sub>2</sub>	566
6.3.3	SO <sub>2</sub> Conversion into SO <sub>3</sub>	567
6.3.4	Sulfuric Acid Process	572
<b>6.4</b>	<b>Nitric Acid</b>	<b>573</b>
6.4.1	Reactions and Thermodynamics of Nitric Acid Production	574
6.4.2	Kinetics of Catalytic Oxidation of Ammonia	576
6.4.2.1	<i>Catalytic Oxidation of Ammonia on a Single Pt Wire for Cross-Flow of the Gas</i>	577
6.4.2.2	<i>Catalytic Oxidation of Ammonia in an Industrial Reactor, That Is, on a Series of Pt Gauzes</i>	583
6.4.3	NO Oxidation	587
6.4.4	Nitric Acid Processes	588
<b>6.5</b>	<b>Coke and Steel</b>	<b>591</b>
6.5.1	Steel Production (Overview)	591
6.5.1.1	<i>Steel Production Based on the Blast Furnace Route</i>	592
6.5.1.2	<i>Steel Production Based on Scrap and Direct Reduced Iron (DRI)</i>	593
6.5.2	Production of Blast Furnace Coke	593
6.5.2.1	<i>Inspection of Transient Process of Coking of Coal</i>	596
6.5.2.2	<i>Case I: Negligible Thermal Resistance of Coal/Coke Charge</i>	596
6.5.2.3	<i>Case II: Negligible Thermal Resistance of Heated Brick Wall</i>	598
6.5.2.4	<i>Case III: Thermal Resistances of Brick Wall and Coal Charge Have to Be Considered</i>	598
6.5.3	Production of Pig Iron in a Blast Furnace	599
6.5.3.1	<i>Coke Consumption of a Blast Furnace: Historical Development and Theoretical Minimum</i>	603
6.5.3.2	<i>Residence Time Distribution of a Blast Furnace</i>	606
<b>6.6</b>	<b>Basic Chemicals by Steam Cracking</b>	<b>609</b>
6.6.1	General and Mechanistic Aspects	609
6.6.2	Factors that Influence the Product Distribution	612
6.6.2.1	<i>Influence of Applied Feedstock</i>	612
6.6.2.2	<i>Influence of the Temperature in the Cracking Oven</i>	612
6.6.2.3	<i>Influence of Residence Time</i>	612
6.6.2.4	<i>Influence of Hydrocarbon Partial Pressure in the Cracking Oven</i>	613

- 6.6.3 Industrial Steam Cracker Process 613
- 6.6.4 Economic Aspects of the Steam Cracker Process 617
- 6.7 Liquid Fuels by Cracking of Heavy Oils 618**
  - 6.7.1 Thermal Cracking (Delayed Coking) 619
  - 6.7.2 Fluid Catalytic Cracking (FCC Process) 622
