Zusammenfassung	iii
Abstract	v
List of Figures	xi
List of Tables	xv
Nomenclature	xvii
1 Introduction	1
1.1 Research background	1
1.2 Purpose of the study	2
1.3 Outline	2
2 State of the art review	3
2.1 Production engineering	3
2.2 Micro- and nanomanufacturing technologies	4
2.2.1 State of micro- and nanomanufacturing technologies	4
2.2.2 Classifications	5
2.2.3 Micro- and nanomanufacturing of polymer materials	7
2.2.4 Laser direct writing by two-photon polymerization	8
2.3 Plasmonics	10
2.3.1 Overview	10
2.3.2 Excitation of SPPs	11
2.3.3 Observation of SPPs	13
3 Theory	17
3.1 Electromagnetic wave equation	17
3.2 Electromagnetic field components	18
3.3 The dielectric function of gold and silver	19
3.4 Surface plasmon polaritons at the metal/dielectric interface	23
3.4.1 Dispersion relations of propagating SPPs	24
3.4.2 Propagation length and skin depth	27
4 Materials and methods	31
4.1 Materials used for fabrication	31
4.1.1 Summary of applied materials	31
4.1.2 Synthesis of Zr-hybrid material	32
4.2 Fabrication Methods	32

4.2.1	Laser direct writing by two-photon polymerization	32
4.2.2	Nanoimprint lithography	35
4.2.3	Microscope projection photolithography	36
4.3	Characterization methods	38
4.3.1	Leakage radiation microscopy	38
4.3.2	4f imaging system	40
5	Nanofabrication of high-resolution periodic structures with a gap size below 100 nm by two-photon polymerization	43
5.1	Introduction	43
5.2	Materials and preparation	44
5.3	Results and discussion	45
5.3.1	Impact of laser power on the voxel size	45
5.3.2	Influence of different materials on the structure formation	45
5.3.3	Investigation on the structure formation with respect to the laser focus position	46
5.3.4	Fabrication of periodic structures with a nanoscale periodic distance	50
5.4	Conclusion	50
6	Manipulation of surface plasmon polaritons with specially designed 3D metallic structures	53
6.1	Manipulation of surface plasmon polaritons with different 3D metallic structures	53
6.1.1	Introduction	53
6.1.2	Structure design	55
6.1.3	Influence of processing parameters and applied materials on the structure formation	55
6.1.4	Results and discussion	59
6.1.5	Conclusion	61
6.2	Omnidirectional concentration of surface plasmon polaritons in 3D metallic structures	64
6.2.1	Introduction	64
6.2.2	Structure design	65
6.2.3	Experimental methods	65
6.2.4	Results and discussion	66
6.2.5	Conclusion	71
6.3	Supplementary	73
6.3.1	The improvement of curved surface roughness	73
6.3.2	Observation of the concentration effects realized by metallic structures with different r_s	74
7	Fabrication and characterization of multi-component structures composed of a resonator and a 3D waveguide	77
7.1	Design and fabrication of the structure	77
7.2	Basics of resonators	79
7.3	Results and Discussion	80
7.4	Conclusion	83

- 8 Experimental demonstration of surface plasmon polaritons reflection and transmission** **85**
- 8.1 Introduction 85
- 8.2 Laws of reflection and refraction 86
- 8.3 Results and discussion 88
- 8.4 Conclusion 90

- 9 Summary and outlook** **91**
- 9.1 Summary 91
- 9.2 Outlook 92

- Bibliography** **93**

- Appendix A Surface plasmon polaritons** **109**
- A.1 Matlab code for the calculation of surface plasmon polaritons dispersion relations 109
- A.2 Matlab code for the calculation of surface plasmon polaritons propagation length and skin depth 115

- Acknowledgement** **119**
