## **Chapter 1 - Hybrid HAP based biocomposites manufacturing by spark plasma sintering for alloplastic bone grafts** .....

Oana GINGU and Anca DIDU

1.1 Introduction. Necessity for bone grafting .....	7
1.2. Bone grafts.....	8
1.2.1 Bone reconstruction techniques.....	8
1.2.2 Alloplastic bone grafts.....	10
1.3. HAP-based biomaterials for bone grafting.....	16
1.3.1 Main demands of biomaterials for bone grafting .....	16
1.3.2. HAP – based biomaterials .....	17
1.3.3 Powder metallurgy as processing technology of HAP-based bone grafts .....	20
1.4 Particular aspects on hybrid HAP-based biocomposites processing by SPS technology .....	23
1.4.1 General aspects .....	23
1.4.2 Materials and experimental procedure .....	23
1.4.2.1 Raw materials .....	23
1.4.2.2. Samples preparation .....	24
1.4.2.3. Samples characterization .....	24
1.4.3 Experimental results and discussions .....	24
1.4.3.1 SPS behaviour of the submicronic-sized HAP powder particles.....	25
1.4.3.2 SPS behaviour of the micrometric-sized TiH <sub>2</sub> powder particles .....	27
1.4.3.3 SPS behaviour of the nHAP + $\mu$ TiH <sub>2</sub> powder particles mixtures.....	29
1.4.4 Summary on hybride nHAP/ $\mu$ TiO <sub>2</sub> processing by SPS technology .....	32
1.5 References to Chapter 1.....	35

## **Chapter 2 - Solid-state foaming in two step sintering to produce HAp-based biocomposites for bone grafting** .....

Cristina TEISANU and Gabriela SIMA

2.1 Introduction. Demands for bone graft substitutes.....	42
2.2 Biomaterials for bone graft substitutes .....	46
2.2.1 Metallic biomaterials .....	47
2.2.2 Polymeric biomaterials .....	49
2.2.3 Ceramic biomaterials .....	50
2.2.4 HAp-based biocomposite materials.....	54
2.3 Foaming techniques for HAp-based biocomposites .....	56
2.4 Porous HAp-based biocomposites processed by two step sintering technology .....	61
2.4.1 Raw materials .....	61

2.4.2 Methods and techniques .....	63
2.4.2.1 Sample preparation .....	63
2.4.2.2 Compaction.....	64
2.4.2.3 Sintering .....	65
2.5 Experimental results .....	67
2.6 Theoretical and experimental approach on the foaming mechanisms .....	69
2.6.1 Foaming agents.....	69
2.6.2. Foaming mechanisms .....	71
2.6.3 Summary on HAp-based biocomposites processed by two step sintering and pore forming techniques .....	78
2.7 References to Chapter 2.....	79

**Chapter 3 - FEM biomechanical analysis of the skull reconstruction using new advanced biocomposite materials.....85**

Daniela COMAN and Oana OȚĂȚ

3.1 Introduction .....	86
3.2 Materials .....	94
3.2.1 Qualitative structural composition of biocomposite materials .....	94
3.2.2 Mechanical properties of biocomposite materials .....	97
3.3 Computational method .....	98
3.3.1 Static mechanical behaviour of biocomposite skull implant using finite element modeling .....	98
3.3.1.1 Development of a finite element model of the skull implant mesh generation and boundary conditions.....	99
3.3.1.2 Simulation results of the static analysis.....	101
3.3.2 Dynamical mechanical behaviour of biocomposite skull implant using finite element modeling .....	112
3.3.2.1 The vehicle's law of motion during the impact .....	112
3.3.2.2 The Hybrid III 50 <sup>th</sup> percentile male-seat- steering wheel model .....	114
3.3.2.3 Implant modelling in the skull area .....	116
3.3.2.4 Results interpretation .....	119
3.3.3 Comparative analysis of the static and dynamic mechanical implant behavior ...	123
3.4 References to Chapter 3.....	124

**Chapter 4 - Azoic dyes: from thermal properties to a wide range of applications .....127**

Andrei ROTARU and Anca MOANȚĂ

4.1 Introduction to azoic dyes .....	128
4.1.1 Classification of dyes .....	128
4.1.2 Solubility and adhesion of dyes.....	129
4.1.3 Chromophores and the corresponding categories of dyes .....	130
4.1.4 Azoic dyes .....	132
4.2 Applications of azoic dyes.....	134
4.2.1 General applications of azoic dyes .....	134
4.2.2 Azomonoethers and their applications .....	137

4.3 Degradation and thermal stability of azo-derivatives .....	139
4.4 Thermokinetic investigation of azo-derivatives .....	148
4.5 References to Chapter 4.....	150

**Chapter 5 - Multi-component doped phosphate glasses as agricultural fertilizers for spring and autumn crops .....165**

Bogdan Alexandru SAVA and Lucica BOROICA

5.1. Introduction .....	166
5.2. Silico-phosphate glass systems for agricultural fertilizers .....	168
5.3. Phosphate glasses as fertilizers.....	169
5.3.1. Structural characterizations of molybdenum doped phosphate glasses.....	172
5.3.2. Structural characterizations of doped magnesium-potassium-phosphate glasses.....	177
5.4. Solubility of phosphate glasses.....	181
5.4.1. Solubility in water and citric acid .....	181
5.4.2. Conductometric method to measure the solubility of the vitreous fertilizers.....	182
5.4.3. Discussion of solubility results for MO samples.....	185
5.5. Nitrid ed glasses .....	186
5.5.1. Nitrided silica glasses.....	187
5.5.2. Silica oxynitride ternary systems.....	188
5.5.2.1. Na <sub>2</sub> O – CaO - SiO <sub>2</sub> system.....	188
5.5.2.2. CaO - Al <sub>2</sub> O <sub>3</sub> - SiO <sub>2</sub> system.....	189
5.5.2.3. Alkali phosphate nitride glasses .....	189
5.5.3. Nitridation mechanism .....	189
5.5.4. Synthesis of oxynitride glass .....	195
5.5.4.1. Direct melting.....	196
5.5.4.2. Alternate ways to nitride glass obtaining.....	196
5.5.5. Vitreous matrix obtaining.....	197
5.5.6. Nitridation of glassy matrix.....	198
5.5.7. Structural characterization of potassium-magnesium-phosphate nitrided glasses.....	199
5.5.7.1. FTIR spectroscopy.....	199
5.5.7.2. Raman Spectroscopy .....	200
5.5.8. Discussion.....	201
5.6. Conclusions .....	203
5.7. References to Chapter 5.....	205

**Chapter 6 - Methodologies for obtaining carburized steels by powder metallurgy .....209**

Marius-Cătălin CRIVEANU and Andrei ROTARU

6.1. Introduction and State of the Art .....	210
6.2. Powder compaction .....	215
6.2.1. Warm compaction (W/C) .....	217
6.2.2. Dynamic compaction of powders (D/C) .....	221
6.3. Post Sintering Operations (PSO) .....	225

6.3.1. Double pressing – double sintering (DDPS) .....	228
6.3.2. Forging Sintered Parts (FSP) .....	229
6.3.3. Rolling of Sintered Parts (RSP) .....	230
6.4. Heat Treatments of P/M Steels (HTS) .....	234
6.4.1. Sinter-Hardening (SH) .....	235
6.4.2. Carburizing of ferrous P/M.....	237
6.4.2.1. Two-stage carburizing .....	238
6.4.2.2. Carburizing process variables.....	239
6.4.2.3. Gas Carburizing .....	242
6.4.2.4. Porosity influence in carburizing.....	244
6.4.2.5. Carbusintering method (CS) .....	247
6.5. References to Chapter 6.....	249

## **Chapter 7 - Silicon-based nanosized ceramic powders for advanced applications .....259**

Claudiu Teodor FLEACĂ and Florian DUMITRUCHE	
7.1 Brief introduction in the Si-based ceramic materials .....	260
7.2 Physical properties of Si-based ceramics .....	261
7.2.1 Physical properties of silicon carbide.....	261
7.2.2 Physical properties of silicon nitride .....	262
7.2.3 Physical properties of other Si-based ceramic compounds .....	263
7.3 Synthesis methods for Si-based materials at macro-, micro- and nanoscale .....	264
7.3.1 Synthesis methods for SiC.....	264
7.3.1.1 Synthesis methods for bulk SiC.....	264
7.3.1.2 Synthesis methods for SiC nanoparticles .....	265
7.3.1.3 Synthesis methods for elongated SiC nanostructures.....	277
7.3.2 Synthesis methods for Si <sub>3</sub> N <sub>4</sub> .....	281
7.3.2.1 Synthesis methods for bulk Si <sub>3</sub> N <sub>4</sub> .....	281
7.3.2.2 Synthesis methods for Si <sub>3</sub> N <sub>4</sub> nanoparticles .....	282
7.3.2.3 Synthesis methods for Si <sub>3</sub> N <sub>4</sub> nanowires and nanofibers .....	284
7.3.3 Synthesis of other Si-based ceramic micro and nanostructures.....	285
7.4 Advanced applications of silicon-based nanosized ceramics .....	288
7.4.1 Si-based bulk nanocrystalline ceramics.....	288
7.4.2 Si-based nanostructures for advanced nanocomposite coatings .....	293
7.4.3 Si-based nanoceramics for energy production and storage .....	298
7.4.3.1 Si-based nanoceramics for fuel cells .....	298
7.4.3.2 Si-based nanoceramics for supercapacitors .....	299
7.4.3.3 Si-based nanoceramics for Li-ion battery anodes.....	300
7.5 Conclusions .....	311
7.6 References to Chapter 7.....	311
