

Table of Content

1 Introduction.....	1
2 Investigation Subject.....	3
3 Aluminium.....	4
3.1 Aluminium Properties.....	6
3.2 Aluminium Categorisation and Final Products	6
3.2.1 Wrought Alloys	6
3.2.2 Cast Alloys	8
4 Aluminium Recycling Route.....	9
4.1 De-coating Procedure	11
4.2 Aluminium Melting Furnaces.....	12
4.3 Process By-Products	17
4.4 Burners	18
4.4.1 Pollutant Formation and Side Effects	18
4.4.2 Oxy-Fuel Combustion.....	20
4.4.3 Diluted Combustion	20
5 Fundamentals of Reactive Flows	22
5.1 Combustion.....	23
5.1.1 Reaction Chemistry	23
5.1.2 Enthalpy of Formation	27
5.2 Heat Release and Transfer.....	28
6 Computational Fluid Calculations.....	32
6.1 Numerical Methodology for Turbulence Modelling	32
6.1.1 RANS with $k-\epsilon$ model.....	36
6.1.2 RANS with Shear-Stress Transport (SST) $k-\omega$ model.....	37
6.2 Species Transport and Turbulence- Chemistry Interaction	40
6.2.1 Modelling Chemical Reactions	42
6.2.2 Evaluating of Existing Models regarding Diluted Combustion	44
6.3 Modelling Radiation	46
6.4 Modelling Vaporization and Volatile Gas Release	47
7 Investigated Pilot-Scale Furnace	53
7.1 Burner Design.....	54
7.2 General Melting Procedure	55

8 Measurement Campaign	57
8.1 Methods for Capturing Furnace Inner Conditions	59
8.2 Methods for Capturing Condition at the Exhaust Gas Pipe	61
8.3 Combustion Trials	64
8.4 Experimental Summary	82
9 Simulation Setup and Results	83
9.1 Computational Domain and Spatial Discretization (Grid).....	85
9.2 CFD Results and Validation	88
9.2.1 Model of Heating Sequence 1.....	89
9.2.2 Model of Heating Sequence 2.....	91
9.2.3 Model of Holding Sequence.....	97
10 Summary and Conclusion	104
11 Kurzfassung	106
12 List of Figures	107
13 Bibliography	111
Appendix A	i
Appendix B	iv
