

## Table of contents

|         |   |    |
|---------|---|----|
| 1       | Introduction .....                                  | 4  |
| 1.1     | Background and motivation .....                     | 4  |
| 1.2     | Objective and strategy .....                        | 4  |
| 2       | State of the Art.....                               | 6  |
| 2.1     | Steel fiber reinforced concrete (SFRC) .....        | 6  |
| 2.1.1   | Introduction .....                                  | 6  |
| 2.1.2   | Classification of steel fibers .....                | 6  |
| 2.1.3   | Pullout behavior of single steel fiber.....         | 8  |
| 2.1.4   | Fiber distribution and orientation .....            | 16 |
| 2.1.5   | Design and production of SFRC mixture.....          | 19 |
| 2.1.6   | Properties of steel fiber reinforced concrete.....  | 21 |
| 2.1.6.1 | Properties of fresh SFRC.....                       | 21 |
| 2.1.6.2 | Properties of hardened SFRC .....                   | 21 |
| 2.2     | Concrete under concentrated load .....              | 26 |
| 2.2.1   | Introduction .....                                  | 26 |
| 2.2.2   | Analysis of tensile stresses .....                  | 28 |
| 2.2.2.1 | Plane case of concentrated loading .....            | 28 |
| 2.2.2.2 | Spatial case of concentrated loading.....           | 33 |
| 2.2.3   | Investigation of load-bearing capacity .....        | 38 |
| 2.2.3.1 | Experimental investigations .....                   | 38 |
| 2.2.3.2 | Analytical and numerical investigations .....       | 48 |
| 2.3     | SFRC under concentrated load .....                  | 51 |
| 3       | Experimental research.....                          | 54 |
| 3.1     | Scope of experimental research.....                 | 54 |
| 3.2     | Materials and specimens .....                       | 54 |
| 3.3     | Experimental tests .....                            | 58 |
| 3.3.1   | Standard tests.....                                 | 58 |
| 3.3.2   | Fiber concentration and orientation .....           | 58 |
| 3.3.3   | Concentrated loading tests.....                     | 60 |
| 3.4     | Hybrid concrete system .....                        | 62 |
| 3.5     | Experimental program .....                          | 64 |
| 4       | Results of experimental investigations .....        | 70 |
| 4.1     | Properties of fresh and hardened concretes .....    | 70 |
| 4.2     | Concentrated loading tests.....                     | 71 |
| 4.2.1   | Influence of area ratio and concrete strength ..... | 71 |
| 4.2.2   | Influence of specimen dimension .....               | 80 |

|       |   |     |
|-------|---|-----|
| 4.2.3 | Influence of fiber property .....                       | 87  |
| 4.2.4 | Influence of fiber concentration and combination .....  | 94  |
| 4.2.5 | Influence of fiber orientation .....                    | 103 |
| 4.2.6 | Influence of eccentricity of load .....                 | 112 |
| 4.2.7 | Hybrid concrete system .....                            | 122 |
| 5     | Conclusions and future perspectives .....               | 135 |
| 5.1   | Conclusions .....                                       | 135 |
| 5.2   | Future perspectives and practical recommendations ..... | 139 |
| 6     | References .....  | 142 |
| 7     | Appendix A .....  | 153 |
| 8     | Appendix B .....  | 168 |
