Introduction	1
1 Berry phase and topology	5
1.1 Berry phase effects on electronic properties	5
1.1.1 Berry phase and Berry curvature	5
1.1.2 Berry curvature and electron dynamics in an electric field	7
1.2 Symmetry and topology concepts	9
1.2.1 Topology and the Chern number	10
1.2.2 Topological classification of time-reversal invariant Hamiltonians	13
1.2.3 Z_2 - invariants and surface states	15
1.2.4 Topological phase transition by spin-orbit coupling	17
2 Materials	19
2.1 Bismuth selenide - a prototypical topological insulator	19
2.1.1 Crystal structure	20
2.1.2 Topological surface state dispersion	21
2.2 Ternary and quaternary compound topological insulators	23
2.3 The type-II Weyl semimetal WTe_2	25
2.3.1 Crystal structure	26
2.3.2 Electronic structure	27
3 Charge carrier and spin dynamics	29
3.1 Electronic and spin transport	30
3.1.1 Transport properties of helical massless Dirac fermions	30
3.1.2 Spin transport	31
3.1.3 Charge-to-spin conversion	34
3.2 Optical excitation and relaxation dynamics	40
3.3 Photocurrent generation mechanisms	42
3.3.1 Photothermoelectric effect	43
3.3.2 Photogalvanic effects	44
3.4 Shockley-Ramo Theorem and long-range photoresponse in gapless materials	46
4 Surface dominated photoconductance and THz generation in Bi_2Te_2Se	49
4.1 Introduction	49

4.2	Time-domain photocurrent spectroscopy on topological Bi ₂ Te ₂ Se-nanowires	50
4.2.1	Photo-excitation and non-linear response	50
4.2.2	Sampling circuit geometry and time-scales of individual photocurrent contributions	50
4.2.3	Bolometric photoconductance contribution	53
4.2.4	THz-emission from optically pumped Bi ₂ Te ₂ Se-nanowires	56
4.3	Conclusion	58
5	Spin Hall photoconductance in three-dimensional topological insulators	59
5.1	Introduction	60
5.2	Spin Hall photoconductance	60
5.2.1	Helicity dependent photoconductance spectroscopy	60
5.2.2	Symmetry considerations and spin accumulation	62
5.3	Conclusion	67
6	In-plane anisotropy of the photoinduced linear Hall effect in few-layer WTe₂	69
6.1	Introduction	69
6.2	Laser helicity dependent Hall voltage	70
6.2.1	Device geometry and crystal structure of T _d -WTe ₂	70
6.2.2	Polarization-resolved transverse photovoltage	71
6.2.3	In-plane anisotropy of the transverse photovoltage	72
6.2.4	Relaxation time of the transverse photovoltage	74
6.3	Conclusion	76
7	Switchable quantized conductance in topological insulators	77
7.1	Introduction	77
7.2	Low temperature Shockley-Ramo scanning conductance microscopy	78
7.2.1	Detection principle, weighting field and ferroelectric backgate	78
7.2.2	Quantized conductance at circuit edges	80
7.2.3	Weighting field distributions in π -shaped devices	81
7.2.4	Conductance quantization in bulk insulating macroscopic BiSbTe ₃ -films	82
7.3	Conclusion	85
	Summary	87
	Appendix	89
A	Surface dominated photoconductance and THz generation in Bi ₂ Te ₂ Se	89
B	Spin Hall photoconductance in three-dimensional topological insulators	94
C	In-plane anisotropy of the photoinduced linear Hall effect in few-layer WTe ₂	99
D	Switchable quantized conductance in topological insulators	100
