

Contents

1. Introduction	1
2. Basic theoretical concepts	5
2.1. Magnetic moment, magnetization and Zeeman energy	6
2.2. General remark concerning the notation of energy terms	7
2.3. Isotropic and anisotropic exchange interactions	8
2.3.1. Basic principles of the isotropic exchange interaction	8
2.3.2. Introduction to spin-orbit coupling and crystal fields	10
2.3.3. General formulation of the exchange interaction	11
2.3.3.1. Continuum formulation of isotropic and anisotropic sym-	
metric exchange energies	13
2.3.3.2. Overview of the Dzyaloshinskii-Moriya interaction	14
2.3.3.3. Deriving DMI vectors from symmetry arguments	15
2.3.3.4. Continuum formulation of the DMI energy	16
2.3.4. Chiral magnetization textures	17
2.3.4.1. Helical and cycloidal phases	17
2.3.4.2. Conical phase and skyrmions	20
2.4. Magnetostatic interaction and shape anisotropy	26
2.5. Magnetocrystalline anisotropies	31
3. Experimental techniques	35
3.1. In-situ studies of multilayers based on Ni/Cu(001)	36
3.1.1. Overview of the ultrahigh vacuum system	36
3.1.1.1. XPS	36
3.1.1.2. MBE	39
3.1.1.3. PEEM	40
3.1.2. Preparation of Cu(001) single crystals	43
3.1.3. Sample preparation using molecular beam epitaxy	44
3.1.4. Magnetic imaging by threshold photoemission magnetic circular	
dichroism	47
3.2. Lorentz transmission electron microscopy	50
3.2.1. Principle of operation	51
3.2.2. Magnetic contrast for various chiral structures	52
4. Magnetic domains in perpendicularly magnetized thin films	55
4.1. Basics of magnetic domains and domain walls	57
4.2. Domain walls in perpendicularly magnetized thin films	59
4.2.1. Qualitative considerations	59
4.2.2. The q - ϕ domain wall model	61
4.2.2.1. Domain wall profile of the q - ϕ domain wall model	61
4.2.2.2. Magnetostatic energy of canted domain walls	63

4.2.2.3.	Domain wall energy and equilibrium properties	64
4.3.	Theory of one-dimensionally modulated textures	66
4.3.1.	Isolated stripe domains	68
4.3.1.1.	Short-ranged energy contributions	69
4.3.1.2.	Surface magnetostatic energy	69
4.3.1.3.	Volume magnetostatic energy	72
4.3.1.4.	Equilibrium parameters in the thin film limit	74
4.3.2.	Periodic arrays of stripe domains	75
4.3.2.1.	Short-range energy contributions	76
4.3.2.2.	Surface magnetostatic energy	77
4.3.2.3.	Volume magnetostatic energy	80
4.3.2.4.	Equilibrium parameters in the thin film limit	81
4.3.3.	Spiral states influenced by magnetostatic interactions	83
4.3.3.1.	Short-range energy contributions	85
4.3.3.2.	Surface magnetostatic energy	85
4.3.3.3.	Volume magnetostatic energy	86
4.3.3.4.	Equilibrium properties of the spiral state	86
4.4.	Experimental results for stripe domains in Ni/Cu(001) based systems	88
4.4.1.	Application of the domain model to experiments	88
4.4.2.	Ni/Fe/Cu(001), Cu/Ni/Fe/Cu(001) and Pt/Ni/Fe/Cu(001)	91
4.4.3.	Fe/Ni/Cu(001), Cu/Fe/Ni/Cu(001) and Pt/Fe/Ni/Cu(001)	95
4.4.4.	Cu/Ni/Cu(001) and Pt/Ni/Cu(001)	97
4.4.5.	Ni/Fe/Ni/Cu(001)	99
4.4.6.	Cu/Ni/Co/Cu(001)	100
4.5.	Theory of isolated magnetic skyrmions	103
4.5.1.	Modeling the energetics of isolated magnetic skyrmions	105
4.5.2.	Domain model for skyrmions with large normalized radius	108
4.5.2.1.	Short-range energy terms	108
4.5.2.2.	Magnetostatic energies	109
4.5.2.3.	Equilibrium properties of isolated skyrmions	111
4.6.	Phase diagram of perpendicularly magnetized thin films	114
4.7.	Conclusion	117

5. Domain pattern transformations 119

5.1.	Stripe melting in Cu/Ni/Fe/Cu(001)	120
5.1.1.	General properties of the stripe melting transformation	122
5.1.2.	Positional order of the domain pattern during melting	124
5.1.3.	Orientalional order of the domain pattern	130
5.1.4.	Magnetic energies of the domain pattern	133
5.1.5.	Defects and topological charge density	135
5.2.	Correlation of domain fluctuations in Ni/Fe/Cu(001)	137
5.3.	Fluctuations of magnetic skyrmions and topological stability	144
5.4.	Temperature-induced stripe-to-skyrmion transition	150
5.4.1.	Qualitative description of the results	153
5.4.2.	Phase diagram and properties of individual skyrmions	155
5.4.3.	Positional order of the domain pattern	159
5.4.4.	Evolution of defects and topological charge	161

5.5. Conclusion	164
6. Energetics of pattern transformations	167
6.1. General remarks about skyrmion stability	169
6.2. Decay of metastable skyrmions in FeCoSi	169
6.2.1. Contributions	169
6.2.2. Sample design and phase diagram of FeCoSi	170
6.2.3. Transition from the skyrmion phase to the helical phase	172
6.2.4. Transition from the skyrmion phase to the conical phase	176
6.2.5. Interpretation of the activation behavior beyond a simple Arrhenius law	178
6.2.5.1. Enthalpy-entropy compensation	179
6.2.5.2. Temperature-dependent energy barriers	182
6.3. Energetics of pattern transformations in Cu/Ni/Fe/Cu(001)	184
6.3.1. Overview of the experimental procedure	185
6.3.2. Merging of skyrmions and fission of stripes	189
6.3.3. Skyrmion nucleation and annihilation	193
6.4. Conclusion	199
7. Summary of the results	201
Appendix	203
A. Basic theoretical concepts	205
A.1. Continuum formulation of the symmetric exchange energy	205
A.2. Continuum formulation of the DMI energy	206
A.2.1. DMI vectors for fcc-lattices	206
A.2.2. Interface DMI	208
A.2.3. Bulk DMI	209
A.3. One-dimensionally modulated states stabilized by IEI and DMI	210
A.3.1. Helical and cycloidal phases	210
A.3.2. Conical phase	212
A.4. Derivation of the magnetostatic energy for a thin film	212
A.4.1. Surface magnetostatic energy	213
A.4.2. Interaction between surface and volume contributions	213
B. Theory of magnetic domains in perpendicularly magnetized thin films	215
B.1. Domain wall profile in perpendicularly magnetized thin films	215
B.2. Fourier transformation and Fourier series	216
B.2.1. Fourier transform	216
B.2.2. Fourier series	217
B.3. Fourier transforms of several nonperiodic domain profiles	218
B.3.1. In-plane component for the domain wall profile	218
B.3.2. Out-of-plane component for square shaped stripe domains	219
B.3.3. Out-of-plane component for realistic stripe domains	219
B.3.4. In-plane component for realistic stripe domains	220

B.4. Fourier series of several periodic domain structures	221
B.4.1. Out-of-plane component of a square-shaped stripe array	221
B.4.2. Out-of-plane component of a realistic stripe pattern	221
B.4.3. In-plane component of a realistic stripe pattern	222
B.5. Surface-domain interaction energy of a nonperiodic magnetic texture	222
B.6. Volume magnetostatic energy of a nonperiodic magnetic texture	225
B.7. Surface magnetostatic energy of a periodic texture	227
B.8. Volume magnetostatic energy of a periodic texture	229
B.9. Volume magnetostatic energy of a canted wall	231
B.10. Surface-domain interaction energy of a stripe with zero wall width	232
B.11. Properties of the large-radius skyrmion model	234
C. Auto-correlation functions of stripe domain patterns	237
D. Image processing methods	239
D.1. General preprocessing steps	239
D.1.1. Image referencing	239
D.1.2. Background subtraction	240
D.1.3. Spike filtering	240
D.1.4. Fourier-based filtering	241
D.2. Edge detection and domain filling	242
D.3. Skyrmion detection by searching for local minima	243
D.4. Skyrmion detection by contour analysis	244
