

Table of Contents

Extended Abstract	XI
1 Introduction	1
2 Background	3
2.1 High purity Aluminum	3
2.1.1 Definition of high purity Aluminum	3
2.1.2 Application of high purity Aluminum.....	4
2.1.3 Production of high purity Aluminum	6
2.1.3.1 Worldwide production distribution of high purity Al.....	6
2.1.3.2 Production technology of high purity Al	7
2.2 High purity Antimony	13
2.2.1 Application of high purity Antimony.....	13
2.2.2 Production of high purity Antimony	15
2.2.2.1 Production distribution of commercial purity Sb.....	16
2.2.2.2 Production process of commercial pure Antimony	17
2.2.2.3 Production technology of high purity Antimony	20
2.3 Introduction of zone refining	22
2.3.1 Zone refining mechanism.....	23
2.3.1.1 Basic equations in zone refining	23
2.3.1.2 Zone refining influencing factors.....	26
2.3.2 Variants of zone refining.....	27
2.3.3 Possibilities to improve zone refining efficiency.....	31
2.3.3.1 Optimizing experimental parameters	31
2.3.3.2 Cropping and connecting	32
2.3.3.3 Inclination of the charging bar	33
2.3.3.4 Application of an electric current for impurity transport.....	34

Table of Contents

2.3.4	Numerical models to describe zone refining process	34
2.3.5	Assessment of modelling versus experiment	38
2.4	Mechanism of vacuum distillation	38
2.5	High purity analysis methods	41
3	Motivation and Targets	43
4	Experimental and Modeling Investigations	45
4.1	Experimental concept and workflow	45
4.1.1	Experimental concept	45
4.1.2	General workflow	46
4.2	Numerical simulation	49
4.2.1	Zone length optimization through Spim model	49
4.2.2	Refining efficiency comparison between using the optimum zone length and others	53
4.2.3	Chapter conclusion	54
4.3	Zone refining of Aluminum	55
4.3.1	Realization of the zone length measurement with the infrared camera	56
4.3.1.1	IR camera temperature calibration	57
4.3.1.2	Zone length measurement through IR camera	57
4.3.1.3	Sectional summary	61
4.3.2	Variation of the crystal growth rate and of the zone length during zone refining of Aluminum	62
4.3.2.1	Experimental procedure	62
4.3.2.1.1	Experimental design	62
4.3.2.1.2	Data analysis	63
4.3.2.2	Results and discussion	65
4.3.2.2.1	Characterization of zone refining process	65
4.3.2.2.2	Dependency of zone length on power and heater movement velocity	68
4.3.2.2.3	Crystal growth rate variation	70

Table of Contents

4.3.2.3	Sectional Summary	72
4.3.3	Influence of the zone length on the refining efficiency	74
4.3.3.1	Experimental process	74
4.3.3.2	Results and discussion	76
4.3.3.2.1	Real zone length at each zone pass measured by IR camera.....	76
4.3.3.2.2	Zone refining efficiency under different zone length combinations	77
4.3.3.3	Sectional summary.....	78
4.3.4	Influence of initial concentration on refining efficiency	79
4.3.4.1	Experimental process	79
4.3.4.2	Results and discussion	80
4.3.4.2.1	4N pure Aluminum.....	80
4.3.4.2.2	2N8 pure Aluminum.....	81
4.3.4.2.3	Recycled Aluminum.....	82
4.3.4.3	Sectional summary.....	84
4.3.5	Chapter conclusion.....	85
4.4	Zone refining of Antimony	87
4.4.1	Separation behavior of As and Pb during vacuum distillation	88
4.4.1.1	Fundamental of vacuum distillation of Sb	89
4.4.1.2	Experimental process	89
4.4.1.3	Results and discussion	91
4.4.1.4	Sectional summary.....	94
4.4.2	Influence of the heater moving velocity on the refining efficiency of Antimony zone refining	96
4.4.2.1	Experimental process	96
4.4.2.1.1	Measurement of Arsenic evaporation.....	96
4.4.2.1.2	Zone refining of Sb under different heater moving velocities	97
4.4.2.2	Results and discussion	99
4.4.2.2.1	Evaporation of Arsenic.....	99

Table of Contents

4.4.2.2.2 Impurity reduction and effective distribution coefficients of impurities	100
4.4.2.2.3 Metallographic structure of Sb bar after zone refining	107
4.4.2.3 Sectional summary	108
4.4.3 Influence of zone length on the refining efficiency of Antimony	109
4.4.3.1 Experimental process	109
4.4.3.2 Results and discussion	110
4.4.3.3 Sectional summary	115
4.4.4 Influence of additives on As-removal during both vacuum distillation and zone refining processes of Antimony	117
4.4.4.1 Selection of additives	117
4.4.4.2 Experimental process	119
4.4.4.2.1 Production of Sb-Al and Sb-Zn master alloys	119
4.4.4.2.2 Vacuum distillation of Sb-Al and Sb Zn alloys	120
4.4.4.2.3 Zone refining of Sb-Al and Sb-Zn alloys	120
4.4.4.3 Results and discussion	121
4.4.4.3.1 Vacuum distillation of Sb-Al and Sb Zn alloys	121
4.4.4.3.2 Zone refining of Sb-Al and Sb-Zn alloys	124
4.4.4.4 Sectional summary	128
4.4.5 Chapter conclusion	130
5 General Assessment	132
6 Outlook	134
Reference	136
Appendix	143
Acknowledgement	157
