

Contents

About the series — V

List of contributing authors — XI

Mark A. Benvenuto

1 Introduction — 1

- 1.1 Introduction — 1
- 1.2 The chapters — 1
 - 1.2.1 Exploring the vastness of design space for greener solution using a quality approach — 1
 - 1.2.2 Technology supporting green chemistry in chemical education — 2
 - 1.2.3 Greening the curriculum broadly — 2
 - 1.2.4 Sustainability and green initiatives — 2
 - 1.2.5 Bringing green chemistry to undergraduate research — 2
 - 1.2.6 Chlorpyrifor reduction — 3
 - 1.2.7 Analytical techniques and green chemistry principles — 3
- 1.3 Summary — 3

Mark A. Murphy

2 Exploring the Vastness of design space for greener solutions using a quality approach — 5

- 2.1 Green chemistry should focus on scientific solutions to real-world environmental situations — 6
- 2.2 Chemistry and biology remain unpredictable sciences — 8
- 2.3 Social interactions also remain unpredictable — 10
- 2.4 W. Edwards Deming, quality, and “continuous improvement” — 11
- 2.5 Holism, reductionism, MU, quality, and human guided evolution — 16
- 2.6 What should an ethical green chemist or engineer choose to *DO* now? — 22
- References — 25

E. Ann Nalley

3 Technology supporting green chemistry in chemical education — 27

- 3.1 Introduction — 27
- 3.2 My first attempts at green chemistry — 30
- 3.3 Incorporation of Vernier lab quests — 33
- 3.4 Microwave technology in organic labs — 35
- 3.5 CEM explorer microwave reactor — 36

- 3.6 Microwave and ultrasonic synthesis in undergraduate research — 39
- 3.7 Green chemistry for high school students — 41
- 3.8 Conclusion — 42
- References — 43

Lindsey A Welch

- 4 Catalyzing learning with green chemistry undergraduate research — 45**
 - 4.1 Green chemistry connections — 45
 - 4.2 Applied learning from day one — 47
 - 4.3 High impact practices — 48
 - 4.4 Retention, preparation for graduate studies, broadening participation — 49
 - 4.5 Examples — 50
 - 4.5.1 Hydrogenation project — 50
 - 4.5.2 Pyrolysis oil upgrading — 52
 - 4.6 Summary and conclusions/outcomes — 53
 - References — 55

Saraswathi Narayan

- 5 Sustainability and some green initiatives in undergraduate education — 57**
 - 5.1 Super critical extraction of caffeine from tea leaves — 62
 - 5.2 How CO₂ decaffeination works — 62
 - 5.3 Microwave assisted reactions in medicinal chemistry — 66
 - 5.4 Microwave synthesis using CEM — 71
 - References — 78

Mark R. Mason

- 6 Greening the curriculum at the University of Toledo School of green chemistry and engineering — 81**
 - 6.1 Introduction — 81
 - 6.2 Overview of the University of Toledo — 82
 - 6.3 Formation, organization, and mission of the SGCE — 82
 - 6.4 Green chemistry and green engineering curriculum and new academic programs — 84
 - 6.4.1 Challenges, limitations, and approaches to implementation — 84
 - 6.4.2 Guiding principles to curriculum revisions and new program development — 85
 - 6.4.3 New courses — 87
 - 6.4.4 New programs — 90

| | |
|-------|---------------------------------------|
| 6.4.5 | Enrollments — 94 |
| 6.4.6 | Current programmatic initiatives — 96 |
| 6.5 | Conclusions — 96 |
| | References — 97 |

|----------|--|
| 7 | Green analytical solutions for sample preparation: solid phase microextraction and related techniques — 101 |
| 7.1 | Introduction — 101 |
| 7.1.1 | Principles of Green Analytical Chemistry (GAC) — 102 |
| 7.1.2 | Sample preparation in a “green” perspective — 109 |
| 7.2 | Evolution of sample preparation toward greener strategies — 109 |
| 7.3 | Solid phase microextraction: a green and alternative tool for sample preparation — 112 |
| 7.3.1 | Principles, configurations, and compliance with the GAC principles — 112 |
| 7.3.2 | SPME applications in food, environmental and bio-clinical analysis, and greenness assessment — 114 |
| 7.4 | Conclusion and future perspectives — 120 |
| | References — 120 |

| 8 | Chemical reduction of chlorpyrifos driven by flavin mononucleotide functionalized titanium (IV) dioxide — 125 |
| 8.1 | Introduction — 125 |
| 8.2 | Experimental section — 127 |
| 8.2.1 | Materials and methods — 127 |
| 8.2.2 | Preparation of TiO ₂ nanoparticles and functionalization with FMN — 128 |
| 8.2.3 | Monitoring reactivity of FMNH ₂ toward chlorpyrifos — 128 |
| 8.3 | Results and discussion — 128 |
| 8.3.1 | Photoreduction of FMN to FMNH ₂ and its reactivity toward chlorpyrifos — 128 |
| 8.3.2 | Photoreduction of FMN @ TiO ₂ nanoparticles and its catalytic reactivity with chlorpyrifos — 129 |
| 8.3.3 | Monitoring reactivity of FMNH ₂ towards chlorpyrifos — 132 |
| 8.4 | Conclusions — 133 |
| | References — 134 |
