Chapter 1

Introduction — 1

Notes — 3

References — 3

Chapter 2

Innovative water management — 5

Introduction — 5

2.1 Multiple challenges to the water sector — 5

2.1.1 Climate change — 5

2.1.2 Rapid population growth — 7

2.1.3 Urbanisation — 7

2.1.4 Economic growth and resource use — 8

2.1.5 Rising demand for energy — 8

2.1.6 Rising demand for food — 9

2.1.7 Ageing infrastructure and deteriorating water quality — 10

2.1.8 Greenhouse gas emissions — 10

2.1.9 Environmental degradation and biodiversity loss — 11

2.1.10 High customer expectations — 11

2.2 Innovative water management — 11

2.2.1 Innovation in the water sector — 12

2.2.2 Innovative water management technologies — 12

2.2.3 Stakeholder contributions to innovative water management technologies — 13

2.2.4 Barriers to innovative water management technologies — 15

2.2.5 Overcoming barriers — 17

Notes — 18

References — 21

Chapter 3

Conserving and recycling and reusing water — 25

Introduction — 25

3.1 Demand management — 25

3.1.1 Demand management strategies — 26

3.2 Water pricing — 26

3.2.1 Common tariff structures — 27

3.2.2 Irrigation tariff structures — 27

3.3	Water metering —	29
3.4	Leak detection and water distribution network rehabilitation —	30
3.5	Water restrictions —	31
3.6	Water efficiency labelling —	32
3.7	Education and awareness —	33
3.8	Demonstration projects —	35
3.9	Water recycling and reuse —	36
3.9.1	Non-potable use —	36
3.9.2	Potable reuse —	38
	Notes —	40
	References —	42

Chapter 4

Generating renewable energy and recovering resources from wastewater — 45

	Introduction —	45
4.1	Renewable energy generation technologies at wastewater treatment facilities —	45
4.1.1	Biogas from anaerobic digestion —	46
4.1.2	Biomethane —	46
4.1.3	Combined heat and power —	47
4.1.4	Anaerobic co-digestion —	48
4.1.5	Thermal conversion of biosolids —	48
4.1.6	Thermal energy recovery from wastewater —	49
4.2	Renewable energy activities on buildings and surrounding lands —	50
4.2.1	Solar energy —	50
4.2.2	Wind power —	51
4.2.3	Hydropower energy recovery —	51
4.3	Energy efficiency —	52
4.4	Benefits of renewable energy and energy efficiency —	53
4.5	Recovering resources —	54
4.5.1	Nitrogen and phosphorus —	54
4.5.2	Cellulose —	56
4.5.3	Bioplastic —	56
4.5.4	Bricks and tiles —	57
4.5.5	Mining wastewater for metals —	57
	Notes —	57
	References —	60

Chapter 5**Greening of grey water infrastructure — 63**

- Introduction — 63
- 5.1 Rainwater harvesting — 63
- 5.2 Rain gardens — 65
- 5.3 Bioswales — 67
- 5.3.1 Maintenance of bioswales — 67
- 5.4 Floodwater detention and retention basins — 68
- 5.5 Green roofs — 69
- 5.6 Blue roofs — 71
- 5.7 Permeable pavements — 72
- 5.8 Green streets — 74
- 5.8.1 Stormwater planters — 74
- 5.8.2 Stormwater bump-outs — 75
- 5.8.3 Stormwater tree — 76
- 5.8.4 Stormwater tree trench — 76
- 5.8.5 Green car parking lots — 76
- 5.9 Multifunctional spaces — 77
- Notes — 78
- References — 80

Chapter 6**Protecting and restoring water quality in river basins — 85**

- Introduction — 85
- 6.1 River basin planning to protect and restore water quality — 85
- 6.1.1 Developing and implementing a successful river basin management plan — 86
- 6.2 Permits — 89
- 6.2.1 Tradable permits — 90
- 6.3 Best management practices — 94
- 6.3.1 Agricultural best management practices for water quality protection — 94
- 6.3.2 Industrial best management practices for water quality protection — 96
- 6.3.3 Urban best management practices for water quality protection — 99
- 6.4 Source water protection — 100
- Notes — 101
- References — 103

Chapter 7

Smart digital water management and managing customers of the future — 107

- Introduction — 107
- 7.1 Smart digital water management — 107
 - 7.1.1 Categories of smart digital water management technologies — 109
 - 7.1.2 Smart digital water management system components — 109
 - 7.1.3 Smart water grids and smart water meters — 113
 - 7.1.4 Artificial intelligence and machine learning — 114
- 7.2 Managing customers of the future — 116
 - 7.2.1 Customer participation — 116
 - 7.2.2 Enhancing customer experiences across the water distribution network — 121
- Notes — 124
- References — 127

Chapter 8

Innovative financial instruments and approaches for water projects — 131

- Introduction — 131
- 8.1 Overcoming barriers to water financing — 131
 - 8.1.1 Economic and financial instruments — 133
- 8.2 Water prices — 133
- 8.3 Stormwater fee discounts — 134
- 8.4 Stormwater volume credit trading — 135
- 8.5 Environmental taxes — 137
- 8.6 Subsidies — 138
- 8.7 Tradable permits — 139
 - 8.7.1 Tradable water abstraction rights — 139
 - 8.7.2 Tradable water pollution rights — 139
- 8.8 Payment for watershed ecosystem services — 141
- 8.9 Green bonds — 142
 - 8.9.1 The Green Bond Principles — 143
 - 8.9.2 Labelling scheme for green bonds — 143
- 8.10 Public-private partnerships — 145
 - 8.10.1 Public-private partnerships for ecosystem restoration — 146
- Notes — 148
- References — 150

Chapter 9

Best practices and conclusion — 153

- Introduction — 153
- 9.1 Conserving and recycling and reusing water — 153

- 9.2 Generating renewable energy and recovering resources from wastewater — **155**
 - 9.3 Greening of grey water infrastructure — **156**
 - 9.4 Protecting and restoring water quality in river basins — **157**
 - 9.5 Smart digital water management and managing customers of the future — **158**
 - 9.6 Innovative financial instruments and approaches for water projects — **160**
 - Conclusion — **161**
- Index — 163**
