

Table of contents

Declaration	1
Zusammenfassung.....	2
Abstract	3
Acknowledgements	4
Abbreviations.....	5
Chapter 1: Introduction.....	11
B cell development.....	11
B cells in the periphery.....	13
B cell activation	14
Signalling pathways involved in B cell activation	14
The PI3K-Akt-mTOR pathway.....	15
The NF- κ B pathway	15
Second messengers in B cell signalling.....	15
An overview of metabolism	16
Metabolic profile of developing B cells	18
Metabolic profile of peripheral B cells	19
Extrinsic sources of stress in B cells and the importance of microenvironments to B cell development, survival and activation	20
Nutrient availability	20
Oxygen tension	20
Signals from the microenvironment.....	21
Intrinsic sources of stress in B cells	21
Switch from quiescence to proliferation	21
Oxidative stress.....	21
Long lived integrity	22
The central regulators of metabolic stress in B cells.....	22
The mTOR pathway	22
The AMPK pathway	23
Transcription factors, c-Myc and HIF1a	23
The importance of autophagy in B cells.....	24

Connecting signalling and metabolic responses with the adaptor protein, p62/SQSTM1.....	24
Mitigating mitochondrial stress with uncoupling proteins	27
The clinical relevance of an increased understanding of B cell metabolism and adaptations to stress.....	29
Chapter 2: Objectives	30
Chapter 3: Results.....	31
3.1 p62 is important for fine tuning metabolic adaptations in B cells	31
Molecular understanding of p62 in B cells.....	31
p62 accumulates upon B cell activation	31
B cell development and the maintenance of the mature B cell pool are normal in the absence of p62.....	32
Changes in the frequency of B cell output from the BM in the absence of p62.....	35
B cell development progresses normally in the absence of p62	36
A role for p62 in regulating metabolic adaptations in developing B cells	37
Aberrant signalling in Pre B cells lacking p62	39
A role for autophagy in developing B cells	43
p62 is dispensable for <i>in vitro</i> B cell activation.....	44
<i>In vitro</i> activation and metabolism: altered mitochondrial activity in the absence of p62	45
Activation-induced signalling in the absence of p62.....	46
The absence of p62 in ongoing B cell activation disrupts mitochondrial activity.....	50
<i>In vivo</i> B cell activation occurs in the absence of p62	52
The humoral immune response to SRBC immunisation is unaffected by the loss of p62.....	52
The humoral immune response to NP-KLH immunisation is unaffected by the absence of p62	54
Mass cytometry analysis of NP-KLH immunised mice shows increased p62 in the LZ but comparable signalling in the GC in the absence of p62.....	55
Summary.....	60
3.2 A role for autophagy in Burkitt's lymphoma.....	61
Autophagy is important for mitochondrial function and proliferation in Burkitt's lymphoma ..	61
p62 deficiency in Burkitt's lymphoma line was achieved using CRISPR/Cas9	62
3.3 The uncoupling protein, UCP2, aids B cell survival under stress-inducing conditions.....	66
Adaptive mechanisms to mitigate metabolic stress in B cells	66
Changes in ROS levels after hypoxia incubation	67

Changes in protein expression accompanies hypoxic adaptations	68
Inhibiting UCP2 in activated B cells reduced cell viability and proliferation	69
The role of hypoxia and uncoupling in developing B cells	71
Metabolic stress responses in B lymphoma cells.....	72
Ramos cell responses to hypoxia	72
Altered carbon sources alter survival and proliferation of Ramos cells	73
Creating a stable UCP2 knockout cell line	76
Summary.....	77
Chapter 4: Discussion	78
4.1 The role p62 in normal B cell development and activation	78
Accumulation of p62 in activated B cells.....	78
Analysing B cell compartments in the absence of p62	78
Maintaining organelle homeostasis in the absence of p62	78
A role for p62 in B cell output from the bone marrow.....	79
B cell development in the absence of p62	80
p62 in the metabolic regulation of developing B cells	80
Altered signalling in developing B cells in the absence of p62	81
Autophagy in Pre B cells.....	82
p62 is dispensable for <i>in vitro</i> B cell activation.....	83
A role for p62 in fine tuning metabolic adaptations to B cell activation	84
Signalling in activated B cells is altered in the absence of p62.....	85
Ongoing GC reactions and the role of p62	85
The <i>in vivo</i> humoral immune response occurs in the absence of p62	86
4.2 Autophagy and p62 in B cell malignancy	88
4.3 Mitochondrial uncoupling is a mechanism for reducing stress in B cells	89
Hypoxia impacts B cell response to activation.....	89
ROS production during hypoxia	89
Mitochondrial uncoupling is increased during B cell stress.....	90
Future directions for further investigating UCP2 in B cells.....	91
A role for UCP2 in B cell lymphoma.....	91
Concluding remarks	92
Chapter 5: Materials and methods	94

Mice.....	94
Genotyping mice	94
Organ collection	95
Serum preparation	95
Immunisation with sheep red blood cells	95
Immunisation with NP-KLH	96
BrdU analysis for actively proliferating cells.....	96
<i>In vitro</i> activation of B cells.....	96
Induced differentiation of B cells with a germinal centre phenotype <i>in vitro</i>	97
Measuring serum Ig by ELISA	97
Measuring cell proliferation with CCK-8 assay.....	97
Measuring cell proliferation with flow cytometry.....	98
Isolation of cells from mouse bone marrow.....	98
Establishing Pre B cell cultures: total bone marrow procedure.....	98
Establishing Pre B cell cultures: HSC isolation and differentiation procedure	98
Cell lines.....	99
Hypoxia incubation.....	100
Cloning	100
Bacterial transformation and plasmid preparation.....	100
Retroviral transfection	101
CRISPR/Cas9 knockout in Ramos cells	101
Western Blotting.....	102
Preparation of protein lysates.....	102
Measuring protein concentration with BCA	102
SDS polyacrylamide gel electrophoresis (SDS-PAGE).....	102
Western blot transfer of separated proteins	102
PamGene analysis for detection of kinase activity.....	103
Serine/Threonine Kinase Assay (STK).....	103
Tyrosine Kinase Assay (PTK)	104
Flow cytometry	104
Surface staining of extracellular markers	104

Analysis of intracellular molecules	104
Intracellular phospho-flow analysis	104
Calcium flux analysis with Indo-1 AM	105
2NBDG staining for glucose uptake analysis.....	105
Flow cytometric analysis of different metabolic parameters	105
Metabolic flux analysis	106
Mass cytometry (cyTOF).....	107
Microscopy	108
Real Time qPCR	108
RNA purification	108
cDNA synthesis.....	108
Quantitative RT-PCR	108
Software	109
Flow cytometry antibodies	109
cyTOF antibodies.....	109
General Lab Equipment	110
Consumables	110
Reagents.....	111
Kits	112
Chapter 6: References	113
