Preface — V

1 Micro- and nanodevice technology — 1

- 1.1 Background — 1
- 1.1.1 Need for micro/nano devices — 2
- 1.2 Micro- and nanofabrication: basic concepts — 3
- 1.2.1 The idea of scale — 3
- 1.2.2 Important definitions — 5
- 1.2.3 Top-down and bottom-up manufacturing — 9
- 1.3 Common micro- and nanoscale devices — 10
- 1.3.1 Miniaturized battery — 12
- 1.3.2 Supercapacitors — 14
- 1.3.3 Fuel cells — 17
- 1.3.4 Sensor — 20
- 1.3.5 MEMS and NEMS — 24
- 1.3.6 Biomedical devices — 25
- 1.3.7 Function-specific performance evaluation — 27

2 Carbon materials for devices — 29

- 2.1 Carbon and silicon — 29
- 2.2 Carbon materials in miniaturized devices — 31
- 2.3 Materials and their properties — 33
- 2.3.1 Isotropic and anisotropic materials — 35
- 2.4 Atomic structure of carbon and hybridization — 36
- 2.5 Allotropes of carbon — 43
- 2.5.1 Classification of carbon allotropes — 45
- 2.5.2 Composition diagram — 46
- 2.5.3 Allotrope conversion — 47
- 2.6 Phase diagram — 49
- 2.7 Comparison of different forms of carbon — 52

3 Chip-based carbon devices — 56

- 3.1 Introduction — 56
- 3.2 Fabrication techniques for chip-based device — 57
- 3.2.1 Photolithography — 58
- 3.2.2 Nano-imprint lithography — 62
- 3.2.3 X-ray lithography — 63
- 3.2.4 Two-photon lithography — 66
- 3.2.5 Support techniques — 67
- 3.3 Conversion of polymer patterns into carbon — 70

- 3.3.1 Pyrolysis — 71
- 3.3.2 Carbonization and graphitization — 78
- 3.3.3 Material characterization during heat-treatment — 78
- 3.4 Polymer-derived carbon: Physicochemical aspects — 79
 - 3.4.1 Polymer-to-carbon conversion in nature — 80
 - 3.4.2 Early technological applications of synthetic carbon — 82
 - 3.4.3 Classification of polymer-derived carbon — 86
- 3.5 Applications and example devices — 98
 - 3.5.1 Energy storage — 99
 - 3.5.2 Biosensing and cell culture — 100
 - 3.5.3 Topography sensing — 101
 - 3.5.4 Other devices — 102
- 3.6 Current limitations and future trends — 103

- 4 Carbon nanomaterial-based devices — 107**
 - 4.1 Introduction to carbon nanomaterials — 108
 - 4.1.1 Formation and stability — 108
 - 4.1.2 Classification — 110
 - 4.1.3 Graphene — 112
 - 4.1.4 Carbon nanotube (CNT) — 117
 - 4.1.5 Carbon nanofiber — 120
 - 4.1.6 Buckminsterfullerene — 121
 - 4.1.7 Carbon black — 122
 - 4.2 Synthesis of carbon nanomaterials — 125
 - 4.2.1 Chemical vapor deposition (CVD) — 125
 - 4.2.2 Exfoliation of graphite — 134
 - 4.2.3 Epitaxial growth — 136
 - 4.2.4 Arc evaporation and laser irradiation of graphite electrodes — 137
 - 4.2.5 Manufacturing process of carbon black — 139
 - 4.3 Patterning of carbon nanomaterials for devices — 140
 - 4.3.1 Printing — 140
 - 4.3.2 Spray coating — 151
 - 4.3.3 Direct growth — 151
 - 4.3.4 Pattern transfer — 152
 - 4.4 Applications of carbon nanomaterials — 152
 - 4.5 Future prospects — 154
 - 4.5.1 Health and environmental safety of carbon nanomaterials — 155

- 5 Carbon fiber based devices — 157**
 - 5.1 Introduction — 157
 - 5.2 Spinning techniques — 160
 - 5.2.1 Electrospinning — 161

- 5.2.2 Melt-spinning — 166
- 5.2.3 Other spinning techniques — 167
- 5.3 Carbon fiber precursors — 167
 - 5.3.1 Polyacrylonitrile (PAN) — 168
 - 5.3.2 Pitch — 171
 - 5.3.3 Rayon and natural fibers — 173
 - 5.3.4 Lignin — 174
- 5.4 Precursor requirements — 175
 - 5.4.1 Viscoelasticity — 175
 - 5.4.2 Carbonizability — 177
- 5.5 Properties of carbon fibers — 177
 - 5.5.1 Electrical conductivity — 177
 - 5.5.2 Mechanical properties — 178
 - 5.5.3 Thermal conductivity — 181
- 5.6 Classification of carbon fiber — 181
 - 5.6.1 Classification based on manufacturing process — 181
 - 5.6.2 Classification based on microstructure — 182
 - 5.6.3 Classification based on physicochemical properties — 183
- 5.7 Carbon fibers in devices — 185
 - 5.7.1 Tip-sensitive carbon fiber microelectrodes — 186
 - 5.7.2 Surface-sensitive carbon fiber electrodes — 188
 - 5.7.3 Direct use of carbon fiber mats — 191
- 5.8 Advances in carbon fibers — 191

- 6 Flexible and futuristic carbon devices — 195**
 - 6.1 Flexible electronics — 195
 - 6.1.1 Flexible substrates — 196
 - 6.2 Manufacturing of carbon-based flexible devices — 197
 - 6.2.1 Pattern transfer — 198
 - 6.2.2 Laser-patterned carbon — 202
 - 6.3 Heteroatom-containing carbon — 210
 - 6.3.1 N-containing carbon — 211
 - 6.3.2 S-containing carbon — 214
 - 6.4 3D printing of carbon — 215
 - 6.5 Waste-derived carbon — 217
 - 6.6 Future of carbon technology — 220
 - 6.6.1 Interdisciplinary approach — 221
 - 6.6.2 Biodegradable electronics — 221
 - 6.6.3 Low-cost and sustainable manufacturing — 221
