Abstract 5

1 Introduction 9

2 Fundamentals 11
2.1 The general mixed potential integral equations and the electric field integral equation . . . 11
2.2 Thin wires above a ground . . . 14
2.2.1 First mixed potential integral equation for thin wires . . . 16
2.2.2 Second mixed potential integral equation for thin wires . . . 17
2.2.3 Summary for the mixed potential integral equations for thin wires . 17
2.2.4 Electric field integral equation for thin wires . . . 18
2.3 The straight, infinite wire above an infinite ground plane . . . 18
2.3.1 Lumped excitation . . . 20
2.3.2 Plane wave excitation . . . 23
2.4 Classical transmission line theory . . . 24
2.5 The method of moments for thin wires . . . 25
2.5.1 General aspects . . . 25
2.5.2 Thin wires above a ground plane . . . 26
2.6 The singularity expansion method and natural frequencies . . . 28
2.6.1 General aspects . . . 28
2.6.2 Determining the natural frequencies . . . 30

3 Asymptotic approach for the current on a finite wire above a ground 35
3.1 Infinite wire with a lumped impedance and a plane wave excitation – the scattering coefficient . . . 35
3.2 Infinite wire with a lumped impedance and a lumped voltage source – the reflection coefficient . . . 37
3.3 Infinite wire with two lumped impedances and a plane wave excitation . . 38
3.4 Finite wire with arbitrary ports and a plane wave excitation . . . 40
3.5 Numerical evaluation of the scattering and reflection coefficients . . . 41
3.6 Analytic method to determine the scattering and reflection coefficients . . 46
3.6.1 Scattering coefficient . . . 46
3.6.2 Reflection coefficient . . . 47
3.7 Scattering and reflection coefficients for piecewise uniform wires . . . 47
3.8 Extension to multiconductor transmission lines . . . 49
3.9 Summary . . . 50

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

4 Iterative method **51**
4.1 Reflection coefficient 51
4.2 Scattering coefficient 62
4.3 Validation of the analytic current approximation 71
4.4 Extension to multiconductor transmission lines 74
4.4.1 Reflection coefficient matrix for two wires 74
4.4.2 Reflection coefficient matrix for multiple wires 76
4.5 Convergence and comparison to the induced EMF method 77
4.6 Summary 80

5 Experimental validation of the analytic and numerical approximations **81**
5.1 A complex radar cross section 81
5.2 Measurement setup and calibration procedure 82
5.3 Validation of the measurement procedure and time gating 87
5.3.1 Antenna calibration example 87
5.3.2 Complex radar cross section of a metallic sphere 88
5.4 Natural frequencies 90
5.5 Summary 97

6 Summary and outlook **99**
6.1 Summary 99
6.2 Outlook 100

A Wires **103**
A.1 Local coordinate system along smooth wires 103
A.2 The symmetry theorems 105

B Mathematical identities and simplifications **111**
B.1 Integral identities 111
B.2 Simplification of the first iteration reflection coefficient 111
B.3 Simplification of the double integral for the first iteration reflection and scattering coefficient 113
B.4 Asymptotic approximation of the first iteration scattered current 115

Bibliography **119**

List of Figures **125**
