CONTENTS

A Relativity and gravity 1
A.1 Why is classical Newtonian gravity insufficient? 1
A.2 What would be the most general classical theory of gravity? 2
A.3 Lorentz-geometry 5
A.3.1 Affine transformations: 2 possibilities 5
A.3.2 Lie-groups and the generation of the Lorentz-group 9
A.4 Relativistic motion through spacetime 10
A.4.1 Variational principles for relativistic mechanics 10
A.4.2 Legendre-transforms and Hamilton-functions 13
A.4.3 Non-relativistic motion in weak gravitational potentials 15
A.4.4 Photon propagation on the Lorentzian spacetime 17
A.4.5 Photon propagation through weak gravitational fields 18

B Metric and differential structure of spacetime 21
B.1 Metric structure of manifolds and coordinate transforms 21
B.2 Locally Minkowskian structure and the equivalence principle 24
B.3 Vectors and fields on manifolds 25
B.4 Differential structure of manifolds 26
B.4.1 Parallel transport 26
B.4.2 Covariant derivatives 26
B.4.3 Levi-Civita connections 28
B.5 Geodesics 31
B.5.1 Geodesics as autoparallel curves 31
B.5.2 Geodesic motion through a variational principle 35
B.6 Equivalence and the relativistic origin of Newton's axioms 39
B.7 Geodesic deviation, curvature and gravity 41
B.8 Raychaudhuri's equation for geodesic congruences 43
B.9 Lie-differentiation and symmetries on manifolds 44
B.9.1 Lie-derivatives 44
B.9.2 Isometries and Killing-vectors 46
B.9.3 Killing equation 46
B.9.4 Conservation along time-like geodesics 48

C Geometric structure of spacetime and curvature 49
C.1 Riemann curvature tensor 49
C.1.1 Non-commuting parallel transport 49
C.1.2 Non-commuting shifts 50
C.1.3 Non-commuting covariant derivatives 51
C.1.4 Tensors derived from the Riemann-curvature 52
C.1.5 What happens to vectors in parallel transport? 54
C.2 Tensors, tensor densities and integration on manifolds 57
C.2.1 Invariant volume elements and covolumes 57
C.2.2 Covariant divergences 58
C.2.3 Divergences and applications in physics 59
C.2.4 Scalar, vector and tensor densities 61
C.2.5 Integration on manifolds and the Gauß-theorem 63
C.2.6 Covariant differentiation of tensor densities 65
C.3 Lie-differentiation and tensor densities 66
C.3.1 Conformal Killing fields 66

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

C.3.2 Conservation along null-geodesics 67

D Sources of the gravitational field 69
D.1 Gravity and matter 69
D.2 (Relativistic) fluids as sources of gravity 70
D.3 Fields as sources of gravity 73

E Gravitational field equation 77
E.1 What should be realised in a gravitational field equation? 77
E.2 Construction of the field equation 77
E.3 Ricci- and Weyl-curvature 79
E.4 Curvature invariants 80
E.5 Weak and static gravity 80
E.6 Weyl-curvature 81
E.7 Raychaudhuri-equation 84
E.8 Nonlinearity and locality 86

F Black holes 89
F.1 Schwarzschild black holes 89
F.2 Birkhoff's theorem 93
F.3 Conformal scaling of the Schwarzschild solution 93
F.4 Coordinate singularity at the Schwarzschild radius 95
F.5 Painlevé-Gullstrand-coordinates 96
F.6 Propagation of fields on a curved spacetime 97
F.7 Causal structure of black holes 99
F.8 Kruskal-coordinates 101
F.9 Reissner-Nordström black holes 104
F.10 Escape from a black hole 108

G Friedmann-universes 111
G.1 Friedmann-Lemaître-Robertson-Walker cosmologies 111
G.2 FLRW-cosmologies and their Ricci-curvature 112
G.3 Conformal flatness of FLRW-cosmologies 113
G.4 Spatial curvature of FLRW-cosmologies 114
G.5 Cosmological redshift 115
G.6 Cosmological horizons and causal structure 116
G.7 Friedmann-equations 117
G.8 Cosmological constant Λ 121
G.9 Size and age of FLRW-universes 122
G.10 Quintessence: dynamical fluids with varying w 123

H Weak field gravity and gravitational waves 127
H.1 Weak field gravity and gravitational waves 127
H.2 Nonlinearities in the field equation 127
H.3 Gauging of the metric 128
H.4 Linearised gravitational field equation 129
H.5 Vacuum solutions of the linearised field equation 131
H.6 Stationary sources and gravitomagnetism 133
H.7 Wave equation and Lorenz-gauge condition 134
H.8 Plane gravitational waves in traceless transverse gauge 135
H.9 Huygens' principle and elementary waves 136

I Gravity from a variational principle 143
I.1 Variational principles for particles and fields 143
I.2 Variational principles on manifolds 145
I.3 Gauge transformations on manifolds and source terms 147
I.4 Invariant volume elements 148
I.5 Einstein-Hilbert: gravity from a variational principle 149
I.6 Palatini-variation: metric $g_{\mu\nu}$ and connection $\Gamma^{\alpha}_{\mu\nu}$ 152
I.7 Coupling to matter through the energy momentum tensor 153
I.8 Dynamics of the energy-momentum tensor 154

Z Mathematical supplement 157
Z.1 Connection coefficients are not tensors 157
Z.2 Algebraic Bianchi-identity 158
Z.3 Differential Bianchi-identity 159
Z.4 Metric compatibility of the inverse metric 160
Z.5 Projection operators 160
Z.6 Commutativity of Lie-derivatives 162
Z.7 Relation between covariant derivatives and Lie-derivatives 162
