|   |     |
|---|-----|
| Introduction . . . . .  | 1   |
| I. Conformal Mapping of Simply and Multiply Connected Regions. . . . .  | 4   |
| § 1. Conformal Mapping by Means of Linear Transformations . . . . .   | 4   |
| § 2. The Fundamental Theorem of Conformal Mapping. Mapping of the Universal Covering Surface of a Multiply Connected Region . . . . . | 8   |
| § 3. The $p$ -fold Punctured Plane . . . . .  | 14  |
| § 4. The General Case of a Surface of Connectivity $p$ . . . . .  | 20  |
| II. Solution of the Dirichlet Problem for a Schlicht Region . . . . .   | 22  |
| § 1. The Poisson Integral . . . . .   | 22  |
| § 2. Solution of the General Boundary Value Problem. . . . .  | 24  |
| § 3. An Integral Representation of the Solution to the Boundary Value Problem by Means of the Harmonic Measure . . . . .              | 26  |
| § 4. The Green's Function and Harmonic Measure . . . . .  | 28  |
| § 5. On the Level Lines of the Harmonic Measure. . . . .  | 33  |
| III. Function Theoretic Majorant Principles . . . . .   | 37  |
| § 1. The Principle of Harmonic Measure. . . . .   | 37  |
| § 2. Applications to the Absolute Value of an Analytic Function . . . . .   | 41  |
| § 3. The Principle of Hyperbolic Measure . . . . .  | 45  |
| § 4. The Principle of the Counting Functions. . . . .   | 51  |
| § 5. Theorems on Circular Regions . . . . .   | 55  |
| § 6. Theorems of Landau and Schottky . . . . .  | 60  |
| § 7. Applications to the Investigation of Limit and Accumulation Points of Bounded Functions. . . . .                                 | 63  |
| IV. Relations Between Noneuclidean and Euclidean Metrics . . . . .  | 67  |
| § 1. General Remarks . . . . .  | 67  |
| § 2. Carleman's Principle of Monotonicity . . . . .   | 68  |
| § 3. Estimating the Hyperbolic Measure by Means of the Principle of Monotonicity . . . . .  | 85  |
| § 4. Distortion Theorems of Ahlfors . . . . .   | 92  |
| § 5. The Carleman-Milloux Problem. . . . .  | 102 |
| V. Point Sets of Harmonic Measure Zero . . . . .  | 114 |
| § 1. Definition of Point Sets of Harmonic Measure Zero . . . . .  | 114 |
| § 2. Point Sets of Capacity Zero . . . . .  | 121 |
| § 3. The Green's Function and Logarithmic Potential . . . . .   | 128 |
| § 4. Behavior of an Analytic Function in the Vicinity of a Point Set of Harmonic Measure Zero . . . . .                               | 136 |
| § 5. Lemmas on Additive Set Functions. . . . .  | 141 |
| § 6. Metric Properties of a Point Set of Harmonic Measure Zero . . . . .  | 147 |
| VI. The First Main Theorem in the Theory of Meromorphic Functions . . . . .   | 162 |
| § 1. The Poisson-Jensen Formula . . . . .   | 162 |
| § 2. The Characteristic Function . . . . .  | 165 |

|  |     |
|--|-----|
| § 3. Geometric Interpretation of the Characteristic Function . . . . .   | 171 |
| § 4. Generalizations . . . . .   | 177 |
| VII. Functions of Bounded Type . . . . .   | 183 |
| § 1. Quotient Representation of a Function of Bounded Type . . . . .   | 183 |
| § 2. The Poisson-Stieltjes Integral Representation of a Function of Bounded Type . . . . .                                     | 189 |
| § 3. Fatou's Theorem . . . . .   | 198 |
| § 4. The Set of Boundary Values of a Function of Bounded Type . . . . .  | 204 |
| § 5. Application to the Conformal Mapping of the Universal Covering Surface of a Schlicht Region . . . . .                     | 208 |
| VIII. Meromorphic Functions of Finite Order . . . . .  | 214 |
| § 1. The Order of a Meromorphic Function . . . . .   | 214 |
| § 2. Canonical Representation of a Meromorphic Function of Finite Order . . . . .  | 218 |
| § 3. Some Properties of Canonical Products . . . . .   | 221 |
| § 4. The Genus of a Meromorphic Function . . . . .   | 229 |
| IX. The Second Main Theorem in the Theory of Meromorphic Functions . . . . .   | 234 |
| § 1. Introductory Remarks . . . . .  | 234 |
| § 2. Elementary Derivation of the Second Main Theorem . . . . .  | 235 |
| § 3. Lemma on the Logarithmic Derivative. Final Formulation of the Second Main Theorem . . . . .                               | 241 |
| § 4. Differential Geometric Method for the Derivation of the Second Main Theorem . . . . .                                     | 247 |
| § 5. Further Applications of the Differential Geometric Method . . . . .   | 256 |
| X. Application of the Second Main Theorem . . . . .  | 261 |
| § 1. The Theorem of Picard-Borel . . . . .   | 261 |
| § 2. The Deficiency Relations . . . . .  | 265 |
| § 3. Theorems on Ramified Values . . . . .   | 277 |
| XI. The Riemann Surface of a Univalent Function . . . . .  | 282 |
| § 1. On the Singularities of Univalent Functions . . . . .   | 282 |
| § 2. Riemann Surfaces whose Branch Points Lie over Finitely Many Points . . . . .  | 289 |
| § 3. Riemann Surfaces with Finitely Many Branch Points . . . . .   | 298 |
| § 4. On the Relationship Between the Order of a Meromorphic Function and the Critical Points of the Inverse Function . . . . . | 303 |
| XII. The Type of a Riemann Surface . . . . .   | 308 |
| § 1. Ramification of a Riemann Surface . . . . .   | 308 |
| § 2. Deficiency Relations and Ramification . . . . .   | 312 |
| § 3. Sufficient Conditions for the Parabolic Case . . . . .  | 314 |
| XIII. The Ahlfors Theory of Covering Surfaces . . . . .  | 321 |
| § 1. Fundamental Topological Concepts . . . . .  | 321 |
| § 2. Introduction of a Metric . . . . .  | 324 |
| § 3. Metric Properties of the Covering Surface . . . . .   | 327 |
| § 4. Main Theorem on Finite Covering Surfaces . . . . .  | 331 |
| § 5. Inversion of the Main Theorem . . . . .   | 338 |
| § 6. Theorems on Regularly Exhaustible Open Covering Surfaces . . . . .  | 340 |
| § 7. Applications to the Conformal Mapping of Simply Connected Riemann Surfaces . . . . .                                      | 348 |
| § 8. Extensions to Quasi-conformal Mappings . . . . .  | 352 |
| Bibliography . . . . .   | 355 |
| Index . . . . .  | 366 |
