

Contents

Foreword	VI
Introduction	VII
1 World Reserves of Copper and Nickel and their Geographic Distribution	1
1.1 World Reserves of Copper	1
1.2 World Reserves of Nickel	2
2 Production and Consumption Trends	4
2.1 Production and Consumption of Copper	4
2.2 Production and Consumption of Nickel	7
3 The Geochemical Distribution of Copper and Nickel in Potential Rock Types	10
3.1 The Abundance of Copper	10
3.2 The Abundance of Nickel	12
4 The Development of the Cut-Off Grade for Copper and Nickel Ores	14
4.1 Definition of Economic Minability	14
4.2 The Size of an Ore Deposit (Metal Content and Reserves)	15
4.3 The Depth of the Deposit in Relation to Possible Mining Method	15
4.4 The Capacity of Mine Production and of Beneficiation Plant	16
4.5 The Recovery of By-Products	16
4.6 The Significance of Infrastructure	17
4.7 Raw Material Politics as a Factor	17
4.8 Investment Costs and Financing	19
4.9 Development Trend of Average Tenor and Cut-Off Grade in Copper Deposits	23
4.10 Development Trend of Average Tenor and Cut-Off Grade in Nickel Sulphide Deposits	34
4.11 Conclusions Regarding the Trend of Average Metal Grades	39
5 Potential Areas of Large Lowgrade Copper and Nickel Sulphide Deposits	44
5.1 Intermediate and Acidic Intrusives	44
5.2 Mafic and Ultramafic Intrusives	48
5.3 Other Resources	51
6 Prognostic Reflections	52
6.1 Technological Developments	52
6.2 Possibilities for Substitution of Copper and Nickel	54
Summary	55
References	58
Index of Localities, Names and Subjects	62
